THIRTY-FIRST ANNUAL REPORT  
UPON THE  
ASYLUMS FOR INSANE AND IDIOTIC.

---

The recorded operations of the Provincial asylums for the insane and idiotic, for the past year, while exhibiting many points of interest requiring consideration, do not in any marked degree show unusual or varied conditions from that of the routine work in former years. It is obvious, however, that certain conclusions may be reached by a review of the past year's proceedings, when compared with that of former periods, and that the statistics furnish the most reliable data upon which estimates may be based in respect to the work accomplished, or in regard to the future requirements. With this object in view it is of importance to note, first, the movements of the institution populations collectively.

*Movements of Population.*

The admissions during 1897 numbered 905, and for the official year ending September 30th, 1898, 759, or a decrease of 146, for the year under report. For the previous ten years the annual admissions have averaged 754. Therefore, assuming that there has been a substantial increase of population in the Province, these figures would indicate that there has not been, during that term, a greatly increased number of insanity cases. The average number of patients in daily residence, however, shows a marked increase. During 1897 there were, exclusive of the idiot and feeble-minded population in Orillia Asylum, 4,254 patients, and during 1898 4,368, or a daily increased population of 114, and an annual average increase for the past ten years of 88 4-5. The number remaining in the institutions at the close of the year, 30th September last, also shows an increase. At the close of the official year 1897 there were 4,279 patients in residence. At the close of this year of even date there were 4,388, or an increase of 109 in charge.

*Discharges.*

The total number of discharges effected during the past year was 364, and for the previous year 318, or forty-six more for the year ending September 30th last. This is an increase of four-fifths per cent. The ratio of the discharges to the resident population of the former year was 5 3-5 per cent., and in 1898 6 2-5 per cent. This is exclusive of probational discharges, of which there were 260 in 1897 and 314 in 1898.

*Readmissions.*

In this connection it is interesting to compare the readmissions for a number of years of those who were (1) probationally discharged, and (2) finally discharged. The total number of probational discharges for the past ten years was 2,393, of which 463

were readmitted, or 19 per cent. of the total number so discharged; and the total number of final discharges for the same period readmitted was 359, or  $11\frac{1}{2}$  per cent. Of probational discharges for the year there were 314, of whom 53 were readmitted, or 17 per cent.: and of final discharges for the same period there were 364, of whom 46 were readmitted, or  $12\frac{1}{4}$  per cent.

There are many questions of importance, such as the benefits accruing to patients, the evidence of judgment used in granting probational discharges, etc., etc., that may be gathered from the comparatively small percentage of those returned to the institutions for treatment. There is also a basis for estimating the number for whom accommodation must be kept available in event of their being returned, according to the rules, for further residence and treatment. Another matter of equal importance is this, that there has been an annual average of 239 3-10 provided for outside of the institutions, and that the selection of such patients, who are practically boarded out, is made at the discretion and under the judgment of the Superintendents, who are most competent, not only to make the individual selections of such as may be benefitted by residence with their relatives or friends, but also of the ability of those into whose custody they are given to care for and treat them properly.

#### *Deaths.*

The number of deaths and the comparative increase or decrease based upon the total residential population, is best shown in the following table, which extends from October 1st, 1889, to September 30th, 1898, a period of ten years.

Year.	Total Insane population	Deaths.	Percentage.
1889 .....	3,625	158	4.3
1890 .....	3,850	209	4.4
1891 .....	4,514	190	4.2
1892 .....	4,266	198	4.6
1893 .....	4,340	210	4.8
1894 .....	4,416	189	4.2
1895 .....	4,828	265	5.4
1896 .....	4,799	225	4.7
1897 .....	5,023	262	5.2
1898 .....	5,733	238	4.1
Average .....	4,538	214	4.6

The foregoing table showing the number and percentage of deaths for the past ten years not only gives evidence of the success of the treatment and care generally practised, but if reference is made to the records of the individual institutions, it will be seen

how uniform the results are, and that although this afflicted class in many cases is physically infirm, the death rate will compare favorably with the populations of the more favored classes in the cities and towns of the Province. It is also worthy of note that during 1898, 51 of the patients died, aged over 60; 32 died, aged over 70; and 16 died, aged over 80.

*Accommodation.*

The foregoing summary of the movements of the insane population, the number of discharges and number and percentages of deaths during the past ten years, suggests the question of the sufficiency of the existing accommodation now provided in the several asylums, and to a certain extent indicates what will be the requirements for the future. During the past year the daily increased population, as stated, 114, has been largely provided for by occupying the remaining cottage of the group lately constructed at Brockville and using the infirmary just completed at the Hamilton institution, the former affording room for 62 and the latter 46 patients. The following table will show that this additional number of beds has been occupied.

Table showing (1) the asylums where there was no vacant accommodation during each of the months of the official year; (2) the number of applications; (3) the number of patients on probation; and (4) the number of vacancies each month from October 1st, 1897, to September 30th, 1898.

Asylums in which there were no vacancies for the month.		Total No. of applications in the month.	Total No. of patients on probation.	Total No. of vacancies.
Oct. ....	Mimico. ....	44	57	53
Nov. ....	Mimico, Kingston, Brockville .....	61	78	35
Dec. ...	London, Mimico, King-ton .....	74	92	23
Jan. ....	London, Mimico, Kingston, Brockville .....	73	90	22
Feb. ....	London, Mimico, Kingston, Brockville .....	72	81	15
Mch. ....	Kingston .....	59	89	46
Apr. ....	Brockville .....	55	90	36
May ....	Brockville .....	44	94	36
June ...	.....	46	95	31
July ....	Toronto, Mimico, Brockville .....	60	108	32
Aug ....	Toronto, Mimico, Kingston, Brockville .....	53	90	35
Sept ....	Toronto, Mimico .....	55	63	86
	Average .....	58	77	37

While this table shows an average of 37 vacancies, it is necessary to state that for the last five months of the year at Toronto asylum there was an average of 13 patients, and at Mimico an average of 5 patients, or a total of 18 over the allotted number of beds in these two institutions, thus leaving the net number of vacancies at 19. But as any number of the probationally discharged patients who, so long as they remain on the asylum registers, are considered under institution care, and who in many cases are returned without notice, it is evident that daily changes occur, and therefore a monthly average is more desirable to indicate the true condition of the asylum accommodation

than a daily return, and a daily return would be a cumbrous statement of no practical value in this report. The following figures will however explain more fully the situation in regard to accommodation during the past year.

The admissions, as formerly stated, have been.....				759
The discharges, do do .....				364
The deaths, do do .....				238
				602
A difference of .....				157

or 26 per cent. more admissions than the total of discharges and deaths; while the increase in the number of beds during the past year, including the number at Brockville and Hamilton referred to was 123. In view of the limited accommodation and the congested condition of some of the institutions, and the necessity for providing as far as possible for the immediate admission of acute and excited cases, many of whom have homicidal or suicidal tendencies, it will appear how difficult it is to meet all the demands for room in the asylums. And although patients were removed from London institution and from Mimico to the extent of 41, yet so rapidly were these vacancies filled that none were available in the following months of the official year.

#### CONDITION OF THE INSANE.

As there are many matters of interest connected with the condition of the insane in the institutions which may be useful by indicating what are the best arrangements for their custody and treatment, I have thought it would be of interest to state the relative proportions and numbers of these two classes, ordinarily designated as Acute and Chronic; and the following table compiled from the records shows the numbers of each in residence at the close of the year ending September 30th, 1888, and during each succeeding year of the decade, the number also of each class admitted to the institutions and the number of each class remaining in residence at the close of each year during that period:

Totals.....	6,561	9,002	5,497	8,789	4,427	1,322	

The most remarkable feature exhibited in the foregoing table is the great differences in the ratio of the two classes in residence, both at the commencement of the term and during its continuance, and it is of importance to mark the close proportion maintained between them at the close of each succeeding year.

In 1888 the ratio of Acute to Chronics was  $8\frac{1}{2}$  to  $91\frac{1}{2}$ .

In 1898 " " " " "  $7\frac{1}{3}$  to  $92\frac{2}{3}$ .

And the average for ten years was  $6\frac{1}{3}$  to  $93\frac{2}{3}$ , while the ratio of admissions is shown to be 39 per cent. of acute cases to 61 per cent. of chronic. The evidence therefore is clear that many who are admitted during the acute stages of the disease have subsequently passed into the chronic state, and remain as permanent residents in the institutions for a longer or shorter period. The table shows also the large number of chronics who have been and are admitted to the asylums whose condition precludes the hope or prospect of their being restored by curative treatment. Notwithstanding this it need scarcely be said that from a humane or philanthropic point of view, no less consideration should be given to them or inferior provision made for their care.

On the contrary it does not appear from that point of view that any sufficient reason exists to limit or curtail their surroundings or treatment, inasmuch that as a class they are more conscious of any helpful agency or measures taken for their comfort or general well being.

Such considerations and others interwoven with them, have of late led to much discussion as to the best methods or plans for the purpose of securing the greatest advantages for the insane, as well as the establishment of such system as would prove the most economic in providing for them. The method which of late years has been recognized as the most efficient is that in operation in this Province, namely, that the care of the insane is a State or Provincial responsibility, irrespective of the more or less dependent position of the insane, and that this charge involves the undivided control and oversight of this afflicted class. On the other hand without abandoning wholly the oversight in a number of instances, the plan of delegating the authority and supervision to municipalities or districts set apart for the special purpose, has been elsewhere adopted; and in the adjoining States of the Union, one or other of the county or district plans of supervision was formerly in operation there. The State of Wisconsin still adheres largely to the county system for the care of the chronic insane. There are 3,000 patients domiciled in the twenty-five county asylums now established there for the accommodation of this class, together with two State institutions for the treatment of acute cases. The system has been growing into its present existence for the past eighteen years, and it is probably one of the most perfect organizations of this description now in operation. The counties providing for their insane population receive from the State at the rate of \$1.50 per week for the maintenance of each patient, clothing being provided by the counties. But in the event of any county having no such building or provision for the purpose they are charged by the State at the rate named for their care and maintenance at some of the other institutions. The system is under the control of a State board and a great deal of the time of the various members is bestowed on the supervision of the county asylums, and as a result, it is claimed there is a place for every insane person in the State, that there is continuous occupation for the inmates and all restraint on the chronic insane removed. To summarize the matter I take the liberty of making the following quotation from the *American Journal of Insanity* for October 1898, pages 298 and 299.

"The cure of the insane, when that is possible, is true philanthropy, but so small a part of the insane are actually cured that we are accumulating a mass of chronic insane, most of whom must be supported by the public the rest of their lives. The problem in this question is to provide humane care for all of them, not for a part only, at the expense of the rest, and to make them as nearly self supporting as possible, and to prevent the propagation of insane heredity."—(A. O. Wright, Conference of Charities and Corrections. 1896.)

Such statements approving of the system do not, however, go unchallenged, and the journal from which the foregoing quotation is taken contains a criticism by Dr. C. M. Burr, of Flint, Michigan, Secretary of the American Medico-Psychological Association, stating the defects, which after personal observation he found to exist in the county institutions in Wisconsin. The paper referred to was read before the association at its late meeting, and gives evidence of the thoroughly expert knowledge employed in making

the investigation. The State hospitals were found to be well officered, well organized, with sufficient means to supply such food, medical care, attendance, clothing, diversion and employment as the curative care of patients demands. But many of the county institutions are severely criticized for the lack or entire want of the conditions which exist in the State hospitals, and the basis of care is alleged to be the same as that of the poor house. The number of attendants was quite insufficient, patients seemed to be untidy, rooms filled with noisome odors, bath tubs often dirty, closets unclean, beds of straw or husks, slovenly appearance of those who cared for the patients, the use of shackles and handcuffs, patients were whipped, cat-o'-nine tails had formerly been used to induce the female patients to go to the wash tub, and the surroundings and general treatment of the patients tending to depress and result in the apathy of dementia. The foregoing is but the briefest summary of the indictment charged against the county asylums, not of course against each of the institutions, but against a large number of them, and the basis of his objections are summed up in seven distinct particulars, as follows :

1. Absence of the hospital idea.
2. Lack of medical oversight.
3. The inadequate care of patients, particularly of the filthy and feeble classes and epileptics.
4. Lack of sufficient attendants, which necessitates patients remaining too much indoors, particularly in the winter time.
5. Lack of standards of care prescribed and enforced by central authority, superior to politics, as shown in the extreme variation in per capita cost and differences in beds, furnishings, attendance, etc.
6. Lack of efficient State supervision.
7. Frequent lack of discriminating local supervision, this due chiefly to absence of knowledge of the requirements of the insane, and the desire to make favourable financial showings to Boards of Supervisors.

The question of the per capita cost, although not entering largely into the estimate respecting the utility of the county system, is referred to and compared with the Toledo State Hospital, which in 1896 cost per week \$2.61, against \$2.65 for the support of the acute and chronic insane in Wisconsin. The average cost of the 3,005 patients in the county asylums for the year ending September 30th, 1897, was \$1.68, and ranged from \$1 to \$2.52 per capita in the several institutions.

These comparisons do not sustain the opinions entertained by some advocates of the county system for the chronic insane, namely that a less expenditure would be required for their maintenance in event of classification and reoperation being effected. In comparison with the outlay in the Province for both classes during the entire period since Confederation in 1867 to September 30th 1897, the per capita cost, including the expenditure for clothing for the indigent insane, was \$130.58, and for the year under report \$124.24, making an average for the whole period of \$127.41, as against the cost of maintenance or annual expenditure in Wisconsin of \$137.80. No very accurate comparison, in some respects, can be made between the necessary per capita cost in Ontario

---

and a large number of the institutions in the United States. Take for example the largely increased expenditure required for fuel in this Province and the average cost of maintenance here will be comparatively very much reduced.

It is well understood that the propriety of referring to such matters as do not immediately enter into a consideration of the past history and present condition of such institutions in an annual report may be questioned, but in view of the present proportions and growing magnitude of the interests involved, the introduction of such statements bearing upon or criticising the system in operation may be considered not out of place. The evolution which of late years has taken place in the care and treatment of the insane has marked the era as one of special progress in humane efforts for them; and doubtless the increased interest now taken will more fully develop measures for their relief and lighten the anxieties and burdens of society at large.

The tables which follow, and have been compiled from the annual returns, furnish minute detail in respect to the working and routine operations of the asylum collectively. The reports of the several Superintendents will be found to contain information of special importance and interest in respect to the routine operations and scientific progress made in institution work :

# ASYLUMS FOR THE INSANE AND IDIOTIC.

---

For the greater convenience of reference, the tables containing statistics on all points concerning the operations of the Asylums, are placed at the beginning of this report. The following is a list of these tables :—

Table No. 1.—Shews the movements of the entire Asylum population during the year ending 30th September, 1898.

Table No. 2.—Shews the general movement and result of treatment of lunatics in the Asylums of the Province during each of the twenty-two years from the 1st October, 1876, to the 30th September, 1898.

Table No. 3.—Shews the Counties and places from which patients were admitted to the Asylums and the Asylums they were assigned to.

Table No. 4.—Shews the Counties and Districts from which the entire number of patients admitted to the Asylums have been received, including the admissions of the present year; also the Counties and Districts from which the patients remaining in residence the 30th September, 1898, were originally admitted.

Table No. 5.—Shews the length of time lunatics received into the Asylums during the year had been insane prior to admission.

Table No. 6.—Shews the length of residence of patients remaining in the Asylums on the 30th September, 1898.

Table No. 7.—Shews the periods that patients were under treatment who were discharged during the year as being cured.

Table No. 8.—Shews the periods that patients were under treatment who were discharged as improved.

Table No. 9.—Shews the periods that patients were under treatment who were discharged during the year unimproved.

Table No. 10.—Shews the length of residence of patients who died during the year

Table No. 11.—Shews the causes of death of those who died during the year.

Table No. 12.—Shows trades, callings and occupations of patients admitted into the Asylums during the year, and also of the total number admitted.

Table No. 13.—Showing in detail the expenditure of the various Asylums during the year ending on 30th September, 1898.

Table No. 14.—Shewing the expenditure in each Asylum under the various headings of the estimates and the annual cost per patient under such heading.

Table No. 15.—Shews the supplies for which tenders were invited and the prices paid for the same.

Table No. 16.—Shews the number of officers and employees in each and all of the Asylums classified according to the duties performed.

Table No. 17.—Shews the nature of employment, the number of patients employed, the number of days' work done by patients, and the average work in days per patient during the year.

Table No. 18.—Shews in quinquennial periods the ages of those persons admitted to the Asylums (including transfer) during the year ending 30th September, 1898.

Table No. 19.—Shews in quinquennial periods the ages of those persons discharged from the Asylums as cured during the year ending 30th September, 1898.

Table No. 20.—Shews in quinquennial periods the ages of those persons who died in the Asylums during the year ending 30th September, 1898.

#### SOCIAL STATE.

The following information, in respect to the nationalities, religious denominations and social state of the patients admitted, including transfers, as well as the aggregate admissions of all preceding years since 1841, is compiled from the records of the various institutions :

#### *Social State.*

	Admissions of year.	Total admissions.
Married .....	364	10,787
Unmarried .....	460	11,907

#### *Nationalities.*

Canadian .....	585	11,863
English .....	85	2,956
Irish .....	75	4,257
Scotch .....	29	1,843
United States .....	24	650
Other countries and unknown .....	26	1,119

#### *Religious Denominations.*

Church of England .....	160	5,126
Roman Catholic .....	169	4,879
Presbyterian .....	157	4,523
Methodist .....	219	4,881
Other denominations and unknown .....	119	3,283

The following table shews the admissions, discharges, etc., for each year since 1877, inclusive :

Year.	Lunatics admitted.	Discharged, died and escaped.	Remained.	Percentage.
1877	437	331	106	24.25
1878	479	335	144	30.06
1879	461	321	140	30.36
1880	507	353	154	30.37
1881	562	386	116	23.10
1882	493	401	92	18.66
1883	518	433	86	16.57
1884	493	416	77	15.61
1885	457	423	34	7.44
1886	519	355	164	31.60
1887	425	395	30	7.06
1888	566	386	180	31.80
1889	514	441	73	14.20
1890	669	492	117	26.46
1891	928	495	433	46.66
1892	792	531	261	32.95
1893	753	533	220	29.21
1894	789	522	167	21.24
1895	968	569	399	41.22
1896	753	582	181	23.72
1897	905	594	311	34.36
1898	759	650	109	34.36

#### EMPLOYMENT OF PATIENTS.

The following two tables shew, 1st, the percentage of patients employed in the year just closed, and, 2nd, the increase in that percentage which has taken place since 1892, the first year in which we have regular statistics on the subject:

Asylums.	Actual population.	Number of patients who worked.	Collective stay, in days of patients.	Number of days' work done.	Percentage of days worked to collective stay.
Toronto	869	556	256,230	170,953	66.70
London	1,148	830	371,205	264,273	71.16
Kingston	636	525	205,849	142,010	69.00
Hamilton	1,113	878	364,251	277,655	76.14
Mimico	680	513	218,616	162,293	73.23
Brockville	592	382	178,120	82,095	46.25
Orillia	695	303	232,147	88,615	38.17
<b>Total</b>	<b>5,733</b>	<b>3,987</b>	<b>1,826,418</b>	<b>1,181,894</b>	<b>64.69</b>

The following table shews the percentage of days worked to the collective stay in the asylums in each year since 1882 :

Asylums.	1882.	1883.	1884.	1885.	1886.	1887.	1888.	1889.	1890.	1891.	1892.	1893.	1894.	1895.	1896.	1897.	1898.
Toronto	32.15	30.44	53.90	38.40	11.10	56.37	52.09	51.39	62.01	67.04	75.05	73.44	77.13	91.61	72.04	64.99	66.70
London	54.00	69.89	86.56	79.58	77.84	77.84	77.54	77.30	75.43	73.40	77.20	78.71	77.41	76.11	75.69	78.01	71.16
Kingston	45.11	50.33	76.59	61.13	68.26	68.26	65.71	70.56	70.27	87.24	65.89	73.22	74.47	68.60	70.00	69.39	69.00
Hamilton	37.61	62.98	56.40	43.82	62.32	61.49	73.95	57.32	68.43	77.27	76.90	77.20	76.43	76.74	73.64	78.24	76.14

Brockville														52.84	73.42	52.30	46.25
Orillia														38.50	41.85	40.67	38.17

#### ASYLUM EXPENDITURE.

The following table shows the expenditure incurred for the maintenance of the asylums during the past year, as well as for the year which preceded it :

Asylums	Expended 1897.		Expended 1898.		Increase.		Decrease.	
	\$	c.	\$	c.	\$	c.	\$	c.
Toronto	99,516	15	100,270	43	754	28		
London	123,819	99	137,201	95	13,381	96		
Kingston	75,871	76	75,313	70			558	06
Hamilton	113,270	76	112,491	07			779	69
Mimico	73,025	39	66,275	43			6,749	91
Brockville	55,407	66	68,259	13	12,851	47		
Orillia	64,876	76	61,925	98			2,950	78
Totals	605,788	42	621,737	69	26,987	71	11,038	44
Increase, 1898							15,949	27

The next table shews the annual and weekly cost per patient of each of the asylums during 1897 and 1898, together with the average daily population :

Asylums.	Year ended 30th September, 1897.					Year ended 30th September, 1898.				
	Daily average population.	Annual cost per patient.	Weekly cost per patient.	Annual cost per patient after deducting revenue.	Weekly cost per patient after deducting revenue.	Daily average population.	Annual cost per patient.	Weekly cost per patient.	Annual cost per patient after deducting revenue.	Weekly cost per patient after deducting revenue.

## APPENDIX.

TO THE THIRTIETH ANNUAL REPORT UPON THE ASYLUMS FOR THE INSANE AND IDIOTIC, CONTAINING THE ANNUAL REPORTS OF THE MEDICAL SUPERINTENDENTS OF THE ASYLUMS IN TORONTO, LONDON, KINGSTON, HAMILTON, MIMICO, BROCKVILLE AND ORILLIA.

---

ANNUAL REPORT OF THE MEDICAL SUPERINTENDENT OF THE ASYLUM FOR INSANE, TORONTO, ENDING SEPT. 30TH, 1898.

*To Robert Christie, Esq., Inspector of Public Charities, Toronto, Ont.*

SIR,—In accordance with Statute I herewith have the honor to submit to you the fifty-eighth annual report of the operations of the asylum for insane, Toronto, for the official year ending the 30th day of September, 1898.

It will be noticed by the annual table submitted, that there were 172 patients during the year. Of that number 91 were males and 81 females.

62 were discharged as recovered; 25 were discharged as improved and 15 as unimproved; total 102. The number under treatment were 869; of these 40 were sent from the gaols and 132 were admitted by ordinary process.

The deaths were 45, being 28 men and 17 women.

The preponderance of mortality among the men in comparison to the women was largely due to the fact that a greater number of men were received afflicted with senile decay rather than insanity. A large proportion of these died during the year of admission. In 1897, 15 died over 70 years of age. In 1898, 9 died over 70 years of age.

It will be seen that the percentage of recoveries on admission was 36.8 per cent; or nearly 37% as against 30.8% of last year.

It is interesting to note that out of the 62 recoveries 36 were women, being 10 more than men.

Our treatment has been cautious and conservative, and although we have not allowed novelties in treatment to control us, we can record a percentage of recoveries on the woman's side of the house of 40.4%. This is not by any means an unsatisfactory result, considering the bad physical condition of many women admitted. It is pleasing to note that we have no mortality to record from surgical interference. At the same time we use every means, medical and surgical which our judgment dictates to ameliorate the condition of our patients. We are satisfied with the result of treatment.

#### DEATHS.

The death rate is lower this year than last. There were 45 deaths among a population of 869, being 5.2% under treatment. Of course, the mortality will fluctuate from year to year, as it does among the sane persons in the outside world.

There was one suicide of a female patient, who hanged herself on her bedstead in a most determined manner, by a strip of sheeting taken from the bed on which she was lying. The coroner did not think an inquest necessary.

#### CAUSES.

The table showing causes of insanity is practically useless. There are some apparent causes of mental outbreak, but on the other hand there are many insane persons in whom the causation is beyond human ken. In other cases two or more malign influences may operate contemporaneously, but no one can tell which is the dominant agent. Very often the result is taken as a cause, especially is this true in insanity said to have been caused by alcoholism. We find that the invasion of mental disorder may be gradual and in the discomfort consequent thereon spirits are taken in excess to give temporary relief. In these cases the intemperance is a result and not a cause. The same is true of a number of so-called causes such as morphine, chloral and such toxic agents. The attempt to classify the hereditary and congenital causes must of necessity be equally fallacious simply because we do not know to a certainty as to whether active diseased conditions may not have been the occasion of making manifest a tendency which would not have been evoked were it not for active agencies in operation. The causes attributed are

merely hypothetical in many persons. We are only sure of results in such classes as "Religious excitement," "Worry," "Fevers," "Uterine Disorders," "Over work," and such like. They are often only excitants of latent mental weakness. The causes were present but undeveloped before these operated upon the nerve centres which were ripe for an outbreak, yet no expert could fathom their existence until they are made manifest. It will be seen then that a correct classification is impossible.

#### EPILEPTICS.

The removal of the insane epileptics from the asylum and isolating them in wards with extra oversight is a matter commanding attention. This class is dangerous to others and in their convulsions are very shocking sights to insane not thus afflicted. The putting them into distinct cottages would do much to improve the other parts of the different institutions.

#### OPEN DOORS AT NIGHT.

For a number of years past our dormitory doors have remained open at night. No room that holds more than one patient is locked. It is more cleanly than was the other way with its tubs and buckets; there is better ventilation; the patients are not awakened by the noise of opening and shutting doors by the night nurses. These can go in and come out in their slippers and observe the condition of things without making any noise. Not only so but any disturbance is heard at a distance which was not the case with closed bedroom doors. Few patients walk in the corridors at night except from necessity, and they are grateful for this exemption from prison like lock and key. We have no desire to go back to the old order of things.

#### PROBATIONS.

There were 40 sent out on probation during the year. Of that number only 4 were returned. The majority of those delivered to friends and relations had recovered, hence the small number of returns. Many of them, however, were such as might be subject to relapses, so were sent out on trial instead of being discharged when such went away.

#### DENTISTRY.

During the past nine months a good deal of attention has been paid to the teeth of a number of patients by a dentist. It is evident that good digestion depends to a large extent on the proper mastication of food eaten. There is no form of disease that is counteracted so successfully as by the administration of good food followed by its being properly masticated as a preliminary to digestion, assimilation and nutrition. Bad teeth, or absent molars, which grind the food, are factors which tell against proper nourishment being provided to the physical system and more especially to the great nerve centres whose diseased conditions are the producer of mental disorder of all kinds.

So far 60 patients have had their condition improved in these respects, not only by the extraction of decayed teeth, but also by filling of those which could be preserved and by the providing of sets of teeth for those who had no natural teeth left. So far the friends have paid for this dentistry, and the patients state how comfortable and useful the work is, not only in masticating food but where frontal teeth are supplied in the matter of improved vocalization.

It is evident that were a small appropriation made to have our free patients thus treated it would be money well spent and would contribute very much to the recovery of many, especially those of the dyspeptic and melancholic type.

#### GARDEN.

What little ground we have, we utilize to the best advantage. It is indispensable that in season we should have fresh vegetables. Our small patch of ground set apart for garden purposes and to give employment to a number of our patients who were gardeners and farmers before becoming insane has realized over \$6,000 at market prices.

## WORKSHOP.

In our workshop we make all the boots, shoes and slippers we require both for men and women.

We made 175 tin vessels of all kinds and purchased few. We repaired 803 tin vessels some of which were made almost as good as new.

Patients upholstered 69 chairs, 7 sofas, and remade 83 mattresses. The value of all this work if made outside would amount to \$1,343.96.

## WANTS.

A repetition of wants which have been asked for from year to year is herewith re-inserted in the hope that by urgent request often presented they may at last command attention.

It was hoped that during the past year we would be permitted to extend our grounds to King Street as our present enclosure is altogether inadequate to give sufficient airing ground for our patients. We only ask for the material and the labour of our mason as all the work could be done by our patients. A few years ago when 26 acres of land were taken from our grounds we not only took down the old brick wall but we built two new walls at both ends where exposed to the public, largely by patients' labour. These walls were over 600 yards in length and averaged from 12 to 15 feet in height; the cost was comparatively small as the old bricks and stone were again utilized in the new walls. The same method could be adopted again and with like results. The need is evident and the land is asylum property and cannot be used except by ourselves. Our asylum buildings overlook the ground.

It is impossible to understand what reasonable objection can be made to this proposal. As we have no farm land, the working patients would gladly labour at the undertaking, rather than lounge about the wards in weariness and idleness.

## NEW HOSPITAL.

A good deal of the work in the erection of a new hospital could be done by the labour of patients. A substantial brick building would meet our wants. This erection could not only be occupied by the sick, but part of it could be set apart for acute and curable cases. This would enable us to accommodate at least 50 more patients in the asylum.

A flour house is wanted.

A great deal of sidewalk will have to be laid during next year. Much of it is now rotten and dangerous to walk on.

It would be a great convenience to us to have electric power to use in the engineer's shop, to saw wood and to cut fodder. Five horse power would be sufficient.

A new range is needed in the kitchen. The present one has been in use nearly twenty-two years and is worn out.

One of the wooden coal houses is in a delapidated state and needs re-constructing or a new erection.

A decent entrance is badly needed. The present one is an eye-sore, especially to visitors who are often impressed unfavourably of a whole institution by its approach and main entrance.

The barn yard was set with cobble stones many years ago. By use and the upheaval of by frosts they are now dangerous for animals to walk upon. They will require to be taken up and the earth used. At the best they are very rough and make poor pavement where animals are continually walking. What is needed is asphalt to make a smooth and substantial yard. The soil is clay and will soon form a mire unless a roadway is made with solid material.

The basement floors of the wings will need relaying with oak planking. The present floors have been laid over 30 years ago.

A bowling alley is needed to give exercise to our men patients. It need not cost much as the work could be done by ourselves.

#### PATHOLOGY.

It would be worthy of consideration if a sum were set apart for pathological research. The material is at hand. Medical officers cannot spare the time necessary from their official duties to devote to investigation in this kind of work. The rough *post mortems* held are of little or no importance, especially if investigation is confined to what the eye alone can find out. The unaided vision sees little and knows little except of a very general nature.

In this day of advanced chemical physiology with the aid of the microscope and micro-photography, much good work has been done in those asylums for the insane, in which one of the medical staff devotes all his time to pathological research, and who has been trained in this kind of work. We have not reached that stage so far, although something has been done along that line of research in an amateurish way.

We have excellent professors of pathology in two of the medical schools in this city. Were the material divided between them we could be able to compare the insane life history of each individual with the footprints of disease found after death. Interesting and useful records would be the result.

#### WORK.

Not much on capital account has been expended in the erection of permanent buildings and fixtures. The brick chimneys of the laundry and kitchen have been raised, this not only increases the draught but it has been the means of carrying away from the buildings, smoke and cinders which blew into our wards when the wind came from certain directions.

We have now two excellent spray bath-rooms for males and females. They are built on the most approved plan and will be found to be a great improvement on the bath-tub system; not only on account of extra cleanliness but also for hygienic reasons along medical lines.

The old flour house has been re-roofed as it leaked badly. This structure is needed as a coal-house for the laundry were a new and larger one erected near the bakery, as it to be hoped will be the case next year.

#### ELECTRICITY.

It would be a great improvement to substitute electricity for gas in lighting the various buildings. It is safer than gas, not only in respect to danger from fire but also in regard to the aptitude of many patients to breathe it or set their clothing on fire by it with suicidal intent.

It looks feasible to establish a plant to generate electricity at the Central Prison not only to furnish electric light for itself but also to do so for this Institution and the Mercer Reformatory. It was proved years ago that it would be cheaper than gas and it is also beyond question that the light is much superior.

On account of improvements in generating electricity now-a-days, light is cheaper than when the calculation was formerly made. It is to be hoped this matter will receive consideration as our gas lighting is far from satisfactory.

## CONCERTS GIVEN FOR THE SEASON OF 1897-98.

- September 21st, 1897.—James Baylis and Friends.  
 October 13th, 1897.—Army and Navy Veterans' Band.  
 October 26th, 1897.—Mrs. Titus and Friends.  
 October 27th, 1897.—Prof. Farringer, Ontario College of Music.  
 November 2nd, 1897.—James Baylis and Friends.  
 November 8th, 1897.—Maple Leaf Band.  
 November 11th, 1897.—John Gowinlock and Friends.  
 November 17th, 1897.—West End Y.M.C.A.  
 November 18th, 1897.—D. Carmichael and Friends.  
 November 24th, 1897.—Martin Clewarth and Friends.  
 November 30th, 1897.—St. John's Presbyterian Church Choir.  
 December 7th, 1897.—John Kidner and Friends, Victoria Ministrels.  
 December 8th, 1897.—Madame Stuttaford and Friends.  
 December 9th, 1897.—R. Taylor and Friends.  
 December 14th, 1897.—James Baylis and Friends.  
 January 11th, 1898.—R. Taylor and Friends.  
 January 18th, 1898.—Euclid Avenue, Church Choir.  
 January 20th, 1898.—Crawford St. Church Choir.  
 January 25th, 1898.—James Baylis and Friends.  
 February 1st, 1898.—Rosedale Club, J. J. Walker and Friends.  
 February 2nd, 1898.—Madame Stuttaford and Friends.  
 February 8th, 1898.—West End Y.M.C.A.  
 February 22nd, 1898.—R. Taylor and Friends.  
 February 28th, 1898.—St. John's Church.  
 March 3rd, 1898.—Gaelic Society.  
 March 3rd, 1898.—Jarvis St. Baptist Church S. S. Orchestra.  
 March 10th, 1898.—Yongé St. Y.M.C.A.  
 March 14th, 1897.—Sons of Scotland, Burns Camp No. 1.  
 March 17th, 1898.—Canadian Temperance League, "Mock Trial."  
 March 19th, 1898.—Mr. Frank Yeigh's Picture Travel Talks.  
 March 22nd, 1898.—J. W. Bengough, Chalk Talk.  
 March 24th, 1898.—Messrs Anderson and Gowinlock.  
 March 28th, 1898.—Woodgreen Methodist Church Choir.  
 March 29th, 1898.—James Baylis and Friends.  
 April 4th, 1898.—Wesley Church S. S. Orchestra.  
 April 19th, 1898.—James Baylis and Friends.  
 May 5th, 1898.—Queen St. Methodist Church Choir.  
 May 6th, 1898.—Parkdale Presbyterian Choir.  
 May 12th, 1898.—R. Taylor and Friends.  
 June 1st, 1898.—The Salvation Army Band.

In addition to the above list there were six concerts given during the season from time to time by home talent, the patients taking an active part in them. Many of the patients are not only good musicians as piano performers, cornet players and violinists, but excellent amateur actors, reciters, readers and caricaturists.

The usual sleigh rides, garden parties, croquet, lawn tennis and dances helped to remove the monotony of ward life. In the wards, cards, checkers, bagatelle, billiards and book reading from a library of 1,400 volumes helped to pass the time away in an agreeable manner. The daily papers and the exchanges kindly sent to us from the news paper offices, might be added to the list.

All such amusements are often of more value to tilt the mind into healthful channels than even our most valued medicines are. "They minister to a mind diseased and pluck from memory a rooted sorrow."

As insanity is purely a physical disease it is evident that any methods which will promote bodily health are of primary importance to produce normal conditions.

We cannot express too warmly our heartfelt thanks to our numerous friends in the city for their kindness in furnishing us with first-class entertainments.

#### HOSPITAL.

It is a matter of regret that the designation "Hospital for the insane" is not used in official documents and otherwise. The name of "Asylum for the Insane" is not only objectionable but conveys a false impression as such Institutions in modern times are for the cure of the insane as well as to keep them in custody. We hear relatives constantly complaining because of the use of the name, "Asylum."

For years there has been a consensus of opinion among medical men as to the propriety of the improved designation being adopted not only in Canada but also in the Motherland. In the United States the term "Hospital" is being largely used instead of that term which only conveys the idea of retention and protection.

During the year the work has gone on very smoothly. On the whole the employees have given satisfaction and the officers have been attentive to their duties. It is a great satisfaction to a Chief Officer to have confidence in those carrying out his instructions. In fact, much of the success of his administration depends on a faithful performance of duty by all concerned in Hospital work.

I have the honor to be, Sir,

Your obedient servant,

DANIEL CLARK,  
Medical Superintendent

## ANNUAL STATISTICAL REPORT

Of the operations of the Asylum for Insane, Toronto, for the year ending 30th  
September, 1898.

ANNUAL REPORT OF THE MEDICAL SUPERINTENDENT OF THE  
ASYLUM FOR THE INSANE, LONDON, ONTARIO.

October 1st, 1898.

To R. Christie, Esq., Inspector of Asylums, Toronto, Ontario :

SIR.—I have the honor to transmit to you herewith the Twenty-seventh Annual Report of this Asylum.

There were in residence at this asylum on the first day of October, 1897, 1,016 patients, of whom 478 were men and 538 were women. In the course of the twelve months that have since elapsed there have been admitted into the asylum 132 patients, of whom 65 were men and 67 were women, making the total number of patients under treatment during the year 1,148, 543 men and 605 women.

Of these patients 71 (34 men and 37 women) have been discharged ; 48 (25 men and 23 women) have died ; 3 (all men) have been written off eloped ; and 27 (1 man and 26 women) have been transferred to other asylums ; leaving in residence at present 999 patients, of whom 480 are men and 519 women.

Of the 71 patients who have been discharged, 50 (24 men and 26 women) were discharged recovered ; 17 (7 men and 10 women) were discharged improved ; and 4 (3 men and 1 woman) were discharged at the request of their friends unimproved.

The number of patients discharged recovered and improved was 67, or 50.76 per cent. of the admissions.

The recovery rate from the opening of the asylum down to date, including patients discharged improved has been 40.00 per cent. of the admissions.

The total number of patients under treatment during the year was 1,148, and the number of deaths 48, so that the death rate for the year was 4.27 per cent.

Of the deaths, two were suicides. In each case the coroner was sent for and in neither case was any fault discovered on the part of the officers or employees. As a matter of fact the patients (both women) were determined suicides and no care that we could have bestowed upon them would have prevented the catastrophe which in each case occurred.

The average annual death rate from the opening of the asylum down to the present time has been 4.44 per cent.

The total number of patients admitted into this asylum since it was opened, 20th November, 1870, is 4,263 (2,283 men and 1,980 women). Of these :

There have been discharged 1,630 (842 men and 788 women).

There have died 1,180 (681 men and 499 women).

There have been written off eloped 83 (74 men and 9 women).

There have been transferred to other asylums 371 (206 men and 165 women).

Leaving in residence to-day 999 patients (480 men and 519 women).

Of the 27 patients transferred during the year just closed : 1 (a man) was transferred to Toronto Asylum 30th October, 1897, and 26 (women) were transferred to Brockville Asylum on the 26th March, 1898.

REPAIRS, RENEWALS, ETC., OF THE YEAR.

Of these I shall only mention the most important. (1) Four halls (two on each side) at the north building have been refloored throughout, and the whole six halls have been ceiled with metallic ceiling. This building will now be in a far better condition than ever before. (2) The east cottage has been supplied with an indoor water closet. The

same improvement had been made at the west and north cottages the year before last. (3) We are at work now, and have been for some months, replacing the old tank closets in the main asylum with modern automatic closets. (4) We re-roofed the coal bunkers at main asylum, as the roof (which is driven upon in delivering coal) was worn out. (5) We reconstructed during the summer 6,834 feet of fence, mostly the original outside fence of asylum farm, which after twenty-eight years of exposure is much of it in a bad condition. (6) We put a new floor in the slaughter house. (7) We refitted the large shed used by the gardener, which stands near the greenhouse. (8) We laid 5,000 feet of flooring at main asylum.

#### NEW WORK.

The only thing I shall mention under this head is the long expected and long promised infirmary. We need it for the surgical work which we are doing, and I confidently trust that another year will not go by without a beginning at least being made upon it. It is my belief that, if they were asked the question, nearly every medical man in this asylum district, besides hundreds in the rest of Ontario, would hold up both hands to vote that the Government should build the infirmary; for it is a question with them of the most skillful and best treatment of the patients they send us, in which patients they nearly always feel a lively interest.

#### AMUSEMENTS.

We have had the usual supply and, on the whole, they have been of excellent quality and much enjoyed. We used our amusement room one hundred and five evenings between the middle of October and the middle of April. We had twenty-two concerts forty-four dances, twenty-four "at homes," and fifteen lectures. The total attendance of patients for the 105 evenings in question was 37,881, or an average attendance of 361 each night. I regard these winter evening amusements as essential to the health and comfort of the patients. Besides the evenings we have many other amusements, such as a good library, many journals and newspapers, cards, etc., etc. Then we sent 172 patients, 96 men and 76 women, to spend half a day at the Western Fair on the 12th Sept. And, finally, on 21st of September we wound up the year with our "annual athletic sports." These occupy a half day each year and are much looked forward to and enjoyed. The prizes for the different contest (in number more than a hundred) are donated by London firms and business men. In the aggregate they are worth quite a little money. It is needless to say that we highly appreciate the good feeling and generosity which inspires the kind hearted donors.

#### INSANITY AMONG PAUPER AND ASSISTED EMIGRANTS.

It is well known that many children are sent to Canada from homes maintained in England by philanthropic persons and associations; also that quite a number of what are called assisted emigrants come to us from the British Islands. It has become a serious question whether this class of children and young persons constitute a desirable element in our population. There is an impression abroad that many of these children and young persons are and must be what are called degenerates. That springing as they do from a pauper class and (presumably) from a degenerate ancestry, they must be more liable to vice, crime, imbecility and lunacy than would be the progeny of an ordinary farming or laboring community. It is said, especially, that an altogether undue proportion of these persons drift into our asylums and become a permanent burden upon the taxpayers of this country.

I have tried to settle this question as far as the London Asylum is concerned. I have carefully examined the admission papers of the last twenty years in order to ascertain the number of such persons who have been admitted here during that time. The problem is not a simple one for two reasons, which may be stated as follows (1) We are hardly ever told in a patient's papers whether he does or does not belong to this class, often it

must be entirely unknown to the parties committing the patient whether or not he does (2) The actual number of these child and assisted emigrants in this asylum district is not known, and, therefore, it is not known what would be the number of them sent to the asylum supposing insanity occurred among them in the ordinary ratio to the whole number.

I will state, however, what I found. As I said, I examined all admissions to the asylum for the last twenty years, the number of such being two thousand eight hundred and eight. I found that among these there had been seventeen persons known to be child or assisted emigrants. Over and above this number I found that there had been fifty-seven other admissions any of which might have belonged to this class, and many of whom must have belonged to it. Why do I say that? I say it because these fifty seven persons were all from the British islands, all came out early in life and they were all apparently without friends, that is. there had been no correspondence about them on the part of relatives or friends.

My opinion is that it would be more than fair to the assisted emigrant class to say that one-half of the fifty-seven patients in question belonged to it. Half fifty-seven is twenty-eight, and that number added to the seventeen, who we know are of that class, gives us a total of forty-five persons of this class who have been admitted to London Asylum in the last twenty years. But the total number of patients admitted in that time was two thousand eight hundred and eight. Therefore, one in every sixty-two persons admitted was a child or assisted emigrant.

What, now, is the proportion of child and assisted emigrants to the total population of this asylum district? That total population is, in round numbers, 540,000—a sixty-second part of that is 8,710. It does not seem to me at all possible that we have anything like that number of child and assisted emigrant in this asylum district. If we have not then there is an undue proportion of lunatics among those that we have.

There is another direction from which this problem may be approached. I find that of the 2,808 patients admitted to this asylum in the last twenty years 844 were born in the British islands, that 1,914 were born in Canada and in countries other than Canada and the British islands, but nearly all in Canada, and that fifty patients were admitted whose nativity was unknown. Most of these fifty were undoubtedly born in the British islands—they were English speaking people and had they been born in Canada that fact would almost always have been known. But we will say for the purpose of the present argument that one-half of them were born in the British islands. That makes, of these admissions, 869 born in the British islands and 1,934 born in Canada and elsewhere. That is to say a little more than three-tenths of our admissions are from the British islands; but in Ontario only about one and a-half tenths of the population is born in Great Britain and Ireland, so that from this small section of our population we derive twice as many lunatics as we should were our British-born citizens equal in mental stability to Canadian-born or to average English-born people. The inference is as plain as anything can be. It is that British-born persons who come to Canada are, on the whole (as regards mental stability), far below both the average Briton and the average Canadian. These remarks (as every one knows) cannot and do not apply to the British laborer, farmer or artisan who comes out here seeking fuller scope for his abilities and a better return for his labor; neither do they apply to the children of these who make up indeed the very best part of our population. They can only and do only apply to the class called assisted emigrants, and especially to child emigrants, who, on the whole, being born of a degenerate class in their own country, simply, as is inevitable, manifest in various ways that degeneracy in this.

#### GYNECOLOGICAL WORK.

Nothing has occurred during the past year to alter our opinion as to the desirability and even necessity of this work. We still find that a large proportion of the female patients admitted have pelvic disease which can only be dealt with surgically. And we still find that when such disease is so dealt with the patient's condition, both bodily and mentally, is very frequently materially ameliorated.

The gynecological work done during the past year is given in detail in the table accompanying this report. It remains to give a summary of all the work so far done in the last four years, and the results of the same.

We have examined in all 150 patients, and found organic disease of the pelvic organs in 140 of them, only ten patients of the entire number being free from such disease. Of the 140 cases of organic disease we have operated on 131; there remain four others to be attended to, and there are five cases which, although the subjects of organic disease, are not suitable cases for operation.

It has been charged against us that we imagine disease exists and then look for it and, even if it is not there, find it. The answer to this friendly suggestion is that we never operate on our own diagnosis; this is always either made for us or confirmed by at least one outside thoroughly competent man, who is entirely independent of all members of the asylum staff. I myself never take part in making the diagnosis, but am always present at the operations and am always satisfied by actual observation that the disease which I have been told was diagnosed is actually present.

In every operation, as well as in every diagnosis, we are assisted by at least one expert gynecologist as well as other good surgeons, who are entirely unconnected with the asylum, and the diagnosis previously made is verified by them as well as by myself. It is simply impossible, the way our work is done, that we could diagnose and operate for a diseased condition that did not exist.

The 131 cases upon which we have operated presented the following pathological conditions, often several in one case: in fifteen cases there was dysmenorrhoea or menorrhagia; in seventy-two cases there was disease of the endometrium; in seventy-three cases there was subinvolution of the uterus; in twenty-eight cases there were hypertrophied cervixes; in thirty-eight cases there were lacerated cervixes; in twenty-three cases cystic cervixes; in three cases there was polypi of the cervix; in ten cases there was fibroid tumour of the uterus; in one case there was epithelioma of the uterus; in one case there was sarcoma of the uterus; in forty cases there was retroversion of the uterus; in five cases there was complete procidentia of the uterus; in nineteen cases there was ovarian tumour, often with disease of the tubes; in twenty-six cases there were perineal injuries with their sequential diseases; in one case there was recto-vaginal fistula; in one case an ischio-rectal fistula. A total of 356 diseased conditions in the 131 cases.

The operations performed (often several in one case) were the following:

Curetage and divulsion .....	101 times.
Operations on cervix .....	46 "
Suspension of displaced uteri .....	34 "
Ovariectomy .....	13 "
Hysterectomy .....	18 "
Perineorrhaphy .....	19 "
Laparotomy for tubercular peritonitis .....	2 "
Operation for hematoma of ovarian ligament .....	1 "

---

Total ..... 234 operations.

The result of these 234 operations performed on 131 patients have been so far as follows: First, as regards bodily health. In three cases the patients died as a result of the operation. In nearly all the rest of the cases, in which there had been time for any result to follow, the physical health of the patient has been restored or greatly improved. Then as regards mental health. In forty-seven cases the patient recovered from her insanity. In thirty-five other cases there has been improvement, often very marked in the mental health of the patient. In forty-six cases there has been no improvement in the patient's mental health. So that eighty-two of the 128 patients who survived the operation either recovered their mental health or this was improved.

The length of time each of the eighty-two patients, who either recovered or improved, had been insane at the time they were operated upon was as follows :

Under one year . . . . .	28
Between 1 and 2 years . . . . .	15
" 2 " 3 " . . . . .	10
" 3 " 4 " . . . . .	5
" 4 " 5 " . . . . .	2
" 5 " 10 " . . . . .	12
Over 10 years . . . . .	10
Total . . . . .	82

It is my conviction that very few of these patients would have either recovered or greatly improved if they had not been operated upon ; it is quite certain that many who did recover or improve would have done neither had their physical disease not been removed. Some of those who did well must have very soon died had no operation been done.

Of the patients who recover from their insanity after operation, some become sane almost immediately thereafter, while others recover more slowly, and I have little doubt that several patients who have been operated upon but who have not yet either recovered or improved, will do so when they have time enough. From this point of view the following facts are of some interest : Of the nineteen cases operated upon during the year ending 30th September, 1895, eight (forty-two per cent.) have recovered. Of the twenty-five cases operated on during the year ending 30th September, 1896, nine (thirty-six per cent.) have recovered. Of the forty-six cases operated on during the year ending 30th September, 1897, seventeen (thirty-seven per cent.) have recovered ; and of the forty-one cases operated on during the year ending 30th September, 1898, thirteen (thirty-one per cent.) have recovered. It is almost certain that several cases operated on within the last few weeks or months will yet recover.

I wish to say here that the chief credit for all our surgical work, gynecological and other, should be given to Dr. Hobbs, second assistant physician at this asylum, who operates in every case. The warmest thanks of the institution are due to Dr. Meek, of London, who from the beginning has given us his valuable assistance, and to Dr. Stevenson who always administers the anesthetic. We have received valuable help from other physicians and surgeons of the city of London, to all of whom I desire to express our obligations.

It is important, finally, to note that we never operate without the consent of the patient's friends, that the patient's physician is always consulted and that he is always asked to be present at the operation, as a matter of fact he often does attend the operation, and I have yet to hear of the first physician who, being so consulted and being present, failed to endorse the work, not only generally but that done upon his own patient.

## Supplementary table of gynecological work done at the

No.	Initial.	Date of admission, history of case.	Diagnosis of physical disease.	Date of operation.
1	H. G..	May 14th, 1872; chronic mania of 30 years' standing.	Complete recto-vaginal fistula one inch from perineum.	Oct. 5th, 1897....
2	A. E..	Aug. 9th, 1897; acute mania.	Uterus subinvolted; polypus of cervix blind ischio-rectal fistula, tortuous in character and 6 inches long.	Oct. 5th, 1897....
3	G. L..	Sept. 21st, 1897; chronic mania of over a year's duration.	Retroverted subinvolted uterus.....	Nov. 2nd, 1897....
4	M. E..	June 15th, 1897; acute mania of four months' standing.	Endometritis dysmenorrhœa and stenosis of internal os.	Nov. 9th, 1897....
5	J. A. H.	Nov. 23rd, 1896; chronic mania of three years' duration.	Endometritis of climacteric; uterus still subinvolted; profuse leucorrhœa.	Nov. 9th, 1897....
6	E. S...	Sept. 4th, 1890; acute mania of five weeks at time of admission.	Uterus subinvolted and retroverted, cervix cystic hypertrophied and lacerated, ovaries prolapsed; perineum torn.	Nov. 16th, 1897....
7	S. J. M.	Nov. 6th, 1897; acute mania of eight months' duration.	Endometritis; uterus retroverted.....	Nov. 23rd, 1897....
8	L. R.	Nov. 15th, 1897; Puerperal mania of three months.	Endometritis; uterus subinvolted and retroverted.	Dec. 7th, 1897....
9	M. S..	Oct. 6th, 1897; acute mania.	Endometritis dysmenorrhœa .....	Dec. 7th, 1897....
10	M. E..	Nov. 16th, 1897; acute mania.	Endometritis and dysmenorrhœa; both ovaries enlarged and cystic.	Dec. 21st, 1897.... April 5th, 1898....
11	R. L..	Nov. 23rd, 1897; acute mania of six months.	Endometritis, menorrhagia and retroflexion of uterus.	Jan. 6th, 1898....
12	L. S..	Dec. 9th, 1897; acute mania of nine months.	Endometritis and menorrhagia cystic and hypertrophied cervix and ovaries prolapsed and adherent.	Jan. 11th, 1898....
13	C. W..	Jan. 6th, 1890; chronic mania of eight years'.	Endometritis; uterus retroflexed and ovaries prolapsed.	Mar. 22nd, 1898....
14	L. D..	Oct. 12th, 1897; acute mania.	Endometritis; subinvolted and retroverted uterus.	Mar. 29th, 1898....

London Asylum for the year ending Sept. 30th, 1898.

Operation.	Physical result.	Mental result.	Remarks.
Perineum split through to fistula and track scraped; completed a perineorrhaphy.	Recovered..	Improved, being much quieter and cleaner than formerly.	Extensive chronic eczema of thighs caused by fistulas discharge; cured.
Curettagc, enucleation of polypus, fistula opened up and packed.	Recovered..	Recovered .....	Discharged March 26th, 1897; called at asylum recently and was very well.
Curettagc and an Alexander operation ..	Recovered..	Steadily improving.	Went home on probation September 16th, 1898.
Curettagc .....	Recovered..	Unimproved .....	
Curettagc .....	Recovered..	Improved slightly .....	
Curettagc, amputation of cervix, Alexander operation and perineorrhaphy.	Recovered..	Improved slightly .....	
Curettagc and an Alexander .....	Recovered..	Unimproved .....	
Curettagc and an Alexander .....	Recovered..	Recovered .....	Discharged June 28th, 1898.
Curettagc .....	Recovered..	Recovered .....	Discharged June 28th, 1898.
Curettagc and Duilley's operation on cervix. Removed ovaries via cul-de-sac.	Recovered..	Improved .....	
Curettagc and Alexander's operation ....	Recovered..	Improved .....	Discharged June 23rd, 1898, improved.
Abdominal hysterectomy (uterus and ovaries massed together and adherent to intestines).	Recovered..	Recovered .....	Discharged Aug. 26th, 1898.
Curettagc and Alexander's operation ....	Recovered..	Unimproved .....	
Curettagc and Alexander's operation ....	Recovered..	Recovered .....	Discharged Sept. 14th, 1898.

## Supplementary table of gynecological work done at the

No.	Initial.	Date of admission, history of case.	Diagnosis of physical disease.	Date of operation.
15	E. McK	Feb. 9th, 1898; acute melancholia of two months.	Profuse catarrhal endometritis of the climacteric. discharge very foul; anterior cervix very hard.	April 5th, 1898....
16	B. A.	Nov. 25th, 1884; acute mania of three months.	Uterus subinvolted; cervix cystic and hypertrophic.	April 12th, 1898....
17	B. W..	Jan. 31st, 1898; recurrent mania.	Hematoma of veins of left ovary with varicose condition of vessels of and around left ovarian ligament.	April 20th, 1898....
18	M. P..	April 15th, 1898; acute mania of three months.	All organs of abdomen covered with tubercle, ranging from size of pea to a bean, and intestines adherent to everything in abdomen.	April 26th, 1898....
19	H. C..	April 9th, 1898; acute mania of three months.	Prolapsed and retroverted uterus; fibroid tumor attached to left side of uterus; cervix cystic and eroded; perineum lacerated.	May 3rd, 1898....
20	M. M..	March 4th, 1897; acute mania.	Uterus subinvolted; cervix lacerated; uterus retroverted.	May 10th, 1898....
21	E. G..	March 11th, 1898; acute melancholia.	Caruncle of urethra; cervix torn internally; uterus retroverted and subinvolted; vaginal walls prolapsed.	May 17th, 1898....
22	E. H..	Feb. 21st, 1898; chronic mania of five years' duration.	Uterus subinvolted; cervix lacerated, cystic and hypertrophied; perineum slightly torn.	May 17th, 1898....
23	L. Y..	Feb. 25th, 1898; acute mania of five months.	Endometritis; uterus subinvolted and retroverted; ovaries slightly prolapsed; perineum lacerated.	May 26th, 1898....
24	E. T..	Feb. 19th, 1898; chronic mania of twelve years' standing.	Endometritis; contracted internal os; hemorrhoids.	June 7th, 1898....
25	C. S..	May 28th, 1898; puerperal melancholia of three months.	Uterus flabby with endometritis; all parts much relaxed.	June 7th, 1898....
26	A. B..	April 1st, 1898; chronic mania of four years'.	Catarrhal endometritis, causing a severe vaginitis.	June 7th, 1898....
27	J. O'N.	May 16th, 1898; chronic mania of two years.	Endometritis and leucorrhœa .....	June 21st, 1898....
28	J. B..	March 17th, 1898; acute melancholia of three months.	Subinvolted and retroverted uterus .....	June 28th, 1898....

Curettage and amputation of cervix .....	Recovered..	Unimproved .....	Still in bed.
Curettage and an Alexander .....	Recovered..	Improving .....	Still in bed.

## GENERAL SURGERY.

In general surgery we have performed, in the last four years, 41 operations as follows : Bassini's operation for the radical cure of hernia, 27 times ; for removal of cancer, 2 operations ; for appendicitis, 1 ; trephining, 1 ; minor operations, 10. There was no death. The patient was made more comfortable, and as a result of that, apparently, he often became less irritable, more amenable to management, often very much more useful about the asylum ; but in no single instance was there such a change in the patient as could by the most sanguine be called mental recovery or even marked mental improvement.

It has been apparently doubted by some whether our gynecological work was advisable or capable of justification. I would ask such critics : What about this other surgical work ? Is it right to do that ? In it the mental health of the patient is not improved except that he is made more comfortable and less irritable ; but his physical health and often his usefulness is immensely improved. In the gynecological cases discussed above we have the same improvement in bodily health, the same increase of comfort, the same loss of irritability, the same increase of usefulness and along with these a large number of recoveries. Shall we then endorse the general surgery and condemn the gynecological ? Or shall we endorse both, or condemn both ?

Supplementary table of surgical operations, other than gynecological, done at the London Asylum for the year ending September 30, 1898.

Number.	Initial	Date of admission, history of case.	Diagnosis of physical disease.	Date of operation.	Operation.	Physical result.	Mental result.
1	N. W.	June 13, 1895. Chronic melancholia. (Male.)	Right inguinal hernia.	Nov. 9, '97	Radical cure by the Bassini method.	Recovered..	Unimproved.
2	N. M.	January 29, 1891. Epileptic mania. (Male.)	Right inguinal hernia.	Nov. 23, '97	Radical cure by the Bassini method.	Recovered..	Unimproved.
3	G. W.	February 7, 1895. Chronic mania. (Male.)	Left inguinal hernia.	Dec. 30, '97	Radical cure by the Bassini method.	Recovered..	Unimproved.
4	B. W.	January 31, 1898. Chronic mania (Female.)	Left inguinal hernia complicated by prolapsed left ovary among contents of canal.	April 20, '98	Radical cure by the Bassini method.	Recovered.	Unimproved.
5	R. J.	April 7, 1898. Acute mania. (Male.)	Large hydrocele of left testicle.	April 26, '98	Opened up tunica vaginalis sutured edges to skin around opening, packed gauze.	Recovered.	Unimproved.
6	W. F.	February 14, 1873. Chronic mania. (Male.)	Left inguinal hernia.	June 15, '98	Radical cure by the Bassini method.	Recovered..	Unimproved.
7	D. R.	April 6, 1897. Chronic mania. (Male.)	Hemorrhoids....	July 9, '98	Removed by Allingham's method.	Recovered..	Unimproved.
8	A. R.	July 15, 1898. Senile mania. (Female.)	Diseased thyroid gland by inflammation.	July 15, '98	Made two openings above and below tumor, inserted drainage tube.	Recovering.	Unimproved.
9	J. T.	July 27, 1898. Acute mania. (Male.)	Right inguinal hernia.	Sept. 20, '98	Radical cure by the Bassini method.	Recovering.	Unimproved.

## CARE OF CHRONIC AND MILD CASES.

Should all insane persons, if so desired by their friends, be sent to the provincial asylums, or should some of them be kept and cared for in county houses ? It seems impossible to give a perfectly satisfactory answer to this question. The difficulty is in the fact that there is no line between sanity and insanity, and that between those who are very

insane and those who are barely insane at all, there exists a practically infinite gradation of cases. The practical question of course is: Are there not a number of mild cases, especially senile cases, which could be as well cared for in a county house as in an asylum, and which could be kept more cheaply in the former? There doubtless are in the country many slightly insane senile paupers to whom a county house would be, from all points of view, a fairly suitable abode; but it is doubtful whether they could be there kept, in a manner to commend itself to the people of Canada, more cheaply than in a provincial asylum.

Then as to retaining quite chronic cases, say of mania or melancholia, in the county at the county house—or returning such cases from the asylum to be kept at the county house for the sake of economy? I think it is safe to say that hardly anyone competent to speak on the subject would vote for such a move. The patient, of course, supplied with poor-house clothes and diet, might be kept a little cheaper, but could not be provided with occupation or amusement as well as at a large asylum, and his life, if he had enough sense left to realize it, would be incomparable more cheerless in the poor-house than in the asylum. Medical and surgical aid and surgical appliances, in case of need, could not possibly be provided at the poor-house as at the asylum.

What I would advise would be to establish one or several colonies on the general lines laid down in my report for 1895. Such a colony could grow out (as it were) from an old asylum. Land could be obtained in the immediate neighborhood, inexpensive cottages built, farming and gardening operations carried on, and any other industry suitable to the locality taken up. In such an asylum extension patients could be kept as cheaply as they ought to be kept. They could be supplied with books, periodicals and papers from the asylum supplies, many of them could attend asylum amusements, they would have ample, suitable and constant work—the one great blessing of asylum and of all life.

Over and above (and this is a prime consideration since every lunatic is liable to acute attacks), in case of an acute exacerbation of any kind the patient could be at once removed to the wards of the asylum proper, and another patient (then quiet) sent out to the cottage in his place.

If each county would pay a minimum rate (say \$1 a week) towards the support of each lunatic (not self-supporting), I think that would go far towards solving this difficult problem. Let the county pay the rate fixed and send all patients to the asylum. This would be cheaper for the county than to keep them at home, and the asylum with its means (provided as above) of utilizing the labor of such patients could keep and care for them far better than the county could, and without material loss.

#### OFFICERS AND EMPLOYEES.

The personnel of the medical staff is the same as it was a year ago; that is, I still have as assistants Mrs. Buchan, Beemer and Hobbs. The only change among the officers is that due to the resignation of Mrs. Martin, the assistant matron. Her successor has not yet been appointed. There have been very few changes among the attendants and servants.

I have again to thank Dr. Sippi, the Bursar, for the time and ability he freely bestows upon the musical service of the asylum. Thanks to him we have here an excellent orchestra and band and a very good choir. Dr. Sippi, of course, receives nothing for the musical work he does for the institution; he does it for the love of music and because he takes a live interest in the general welfare of the asylum and desires to help all he can to make the life of the place pleasant to all—both patients and employees.

#### FARM AND GARDEN.

In view of the fact that the farming and gardening operations of this asylum seem to be so little understood and so much misunderstood, I have thought it advisable this year to give a balance sheet of them and to offer therewith such explanatory remarks as will make it, I hope, fully intelligible.

TABLE No. —

RETURN — ASYLUM FOR INSANE, LONDON.—Showing Receipts and Expenditures on Asylum Farm, Fruit and Vegetable Gardens from 1st October, 1897, to 30th September, 1898.

	<u>\$22,025 48</u>	

\$22,025 48

The asylum property here consisted originally of three hundred acres of land. Eight acres have been taken by the C. P. R. and G. T. R., the first of which runs through our property from east to west and the second of which cuts off our south-east corner. Of the two hundred and ninety-two acres left, sixty-nine are occupied by buildings, roads and ornamental grounds. The sewage field contains nineteen acres. The main garden under Mr Rennie, head gardener, contains forty-five. A field of twenty acres has never been ploughed; it is used for pasture and it contains the ice pond from which we get our annual supply of ice. The barn-yard and farm buildings occupy four acres. The piggeries, slaughter house and yard and butcher's house and garden take up four acres. The Barsar's house and garden occupy two acres. There are left one hundred and twenty-nine acres which constitutes the farm in actual use.

The acreage of the different items of the farm crop was as follows :

Hay . . . . .	31	acres.
Ensilage corn . . . . .	16	"
Ripe corn . . . . .	14	"
Oats . . . . .	36	"
Mangolds . . . . .	9	"
Potatoes . . . . .	19	"
Carrots . . . . .	1 $\frac{1}{2}$	"
Peas . . . . .	2 $\frac{1}{2}$	"
Total . . . . .	129	"

Besides the farm we have two fruit and vegetable gardens, the one of forty-five acres under Mr. Rennie, head gardener, the other called the sewage field which contains in all nineteen acres, is under Mr. Flynn. A good deal of this field is taken up by trenches, roads, grass and buildings. All that is arable of it is cultivated by Mr. Flynn, who also has charge of the sewage disposal.

The crop grown by Mr. Rennie on his forty-five acres was, this year, as follows :

#### VEGETABLES.

Asparagus . . . . .	4,765	bunches.
Beans, green . . . . .	69	bushels.
Beets . . . . .	8,608	bunches.
Beets . . . . .	820	bushels.
Cabbage, early . . . . .	2,318	heads.
Cabbage, fall and winter . . . . .	25,412	"
Cabbage, pickling . . . . .	426	"
Cauliflower . . . . .	11,416	"
Carrots . . . . .	11,320	bunches.
Carrots . . . . .	1,040	bushels.
Celery . . . . .	12,200	sticks.
Corn . . . . .	2,064	dozens.
Cucumbers, forced . . . . .	6	"
Cucumbers, garden . . . . .	1,131	"
Cucumbers, pickling . . . . .	178	quarts.
Horseradish . . . . .	150	bunches.
Kale . . . . .	670	heads.
Lettuce, forced . . . . .	178	dozen
Lettuce, garden . . . . .	1,813	"
Onions, green . . . . .	2,660	bunches.
Onions, dried . . . . .	210	bushels.
Onion, pickling . . . . .	156	quarts.
Parsnips . . . . .	630	bushels.

Peas .....	151	bushels.
Peppers, large, sweet .....	73	dozen.
Peppers, cayenne .....	60	quarts.
Potatoes .....	114 $\frac{1}{2}$	bushels.
Radish, forced .....	685	bunches.
Radish, garden .....	5,397	"
Rhubarb, forced .....	96	"
Rhubarb, garden .....	6,084	"
Salsify .....	580	"
Seakale .....	238	bushels.
Spinach .....	145	"
Squash and pumpkins .....	952	
Tomatoes .....	925	bushels.
Turnips, garden .....	1,547	bunches.
Turnips, swede .....	930	bushels.

## FRUIT.

Apples .....	360	bushels.
Apples, crab .....	54	"
Currants, red .....	3,746	quarts.
Currants, white .....	150	"
Currants, black .....	743	"
Cherries .....	678	"
Citrons .....	113	
Grapes .....	60	pecks.
Gooseberries .....	2,837	quarts.
Melons, musk .....	1,846	
Melons, water .....	50	
Plums .....	141	pecks.
Pears .....	847	"
Raspberries .....	2,174	quarts.
Strawberries .....	857	"

## HERBS.

Mint .....	150	bunches.
Parsley .....	200	"
Sage .....	400	"
Savory .....	500	"
Thyme .....	250	"

The crop grown by Mr. Flynn on that portion of the sewage field which is capable of cultivation was as follows :

Asparagus .....	1 684	bunches.
Beans .....	67	bushels.
Beets .....	98	"
Beets .....	400	bunches.
Celery .....	18,580	sticks.
Carrots .....	480	bunches.
Carrots .....	70	bushels.
Cabbage, early .....	6,027	
Cabbage, late .....	2,060	
Cucumbers, forced .....	223	
Cucumbers .....	702 $\frac{1}{2}$	dozen.
Lettuce, forced .....	110 $\frac{1}{2}$	"
Lettuce .....	240	"

Onions . . . . .	2,079	bunches.
Onions . . . . .	136	bushels.
Peas . . . . .	213 $\frac{3}{4}$	"
Radishes, forced . . . . .	216	bunches.
Radishes . . . . .	130	"
Rhubarb, forced . . . . .	45	dozen.
Salsify . . . . .	5	bushels.
Tomatoes . . . . .	220	"
Melons, musk . . . . .	2,136	
Melons, water . . . . .	544	
Strawberries . . . . .	1,133	quarts.
Honey . . . . .	28	pounds.

In making up the above balance sheet I have taken no credit for flowering plants, and yet these are as truly worth money as are the other products of the land. These plants are used, of course, for bedding throughout the ornamental grounds and for ornament in the patients' halls and dining rooms and in the officer's quarters.

We grew this year 6,524 green house plants, the market value of which would not be less than an average of twenty-five cents, *i.e.*, \$1,631, and 3,883 dozen bedding plants which would be worth an average of at least fifty cents a dozen or \$1,941; also 25,232 annuals raised under glass worth at least \$1 per hundred or \$252. There would be some expenses connected with these flowering plants, as for seeds, bulbs, pots, fuel for green-houses, repairs, etc., all of which would certainly not amount to \$400 a year (all wages have been already charged against fruit and vegetables), leaving a balance of profit from this source of at least \$3,824, for which we have full value in the beauty of our grounds.

Should we decide to include the flowers, as suggested, we should show upon the year's farming and gardening operations a net profit of at least \$18,417.

I have the honor to be, Sir,

Your obedient servant,

R. M. BUCKE,

Medical Superintendent.

## ANNUAL STATISTICAL REPORT

Of the operations of the Asylum for Insane, London, for the year ending 30th  
September, 1898.

TABLE No. 1.

Showing movements of patients in the Asylum for the official year ending 30th  
September, 1898.

	Male.	Female.	Total.	Male.	Female.	Total.
Remaining October 1st, 1897 .....				478	538	1,016
Admitted during year :						
By Lieutenant-Governor's warrant .....	16	9	25			
" Medical certificate .....	49	58	107	65	67	132
Total number under treatment during year. ....				543	605	1,148
Discharges during year :						
As recovered .....	24	26	50			
" improved . ....	7	10	17			
" unimproved .....	3	1	4			
Total number of discharges during year.....	34	37	71			
Died .....	25	23	48			
Eloped .....	3		3			
Transferred .....	1	26	27	63	86	149
Remaining in Asylum 30th September, 1898.....				480	519	999
Total number admitted since opening of Asylum .....				2,283	1,980	4,263
" discharged .....	842	788	1,630			
" died .....	681	499	1,180			
" eloped .....	74	9	83			
" transferred .....	206	165	371	1,803	1,461	3,264
" remaining 30th September, 1898.....				480	519	999
Applications on file .....	13	10	23			

TABLE No. 2.

Shewing the maximum and minimum number of patients resident in the Asylum, the total number of days' stay of patients, and the daily average number of patients in the Asylum, from the 1st October, 1897, to 30th September, 1898.

	Male.	Female.	Total.
Maximum number of patients in residence (on the 22nd of March).....	486	550	1,036
Minimum " " (on the 30th of September) .....	480	519	999
Collective days' stay of all patients in residence during year .....	176,295	194,910	371,205
Daily average population.....	483	534	1,017

	Admissions of year.			Total admissions since opening.			Total.

ANNUAL REPORT OF THE MEDICAL SUPERINTENDENT OF THE  
ASYLUM FOR THE INSANE, KINGSTON, FOR THE YEAR ENDING  
SEPTEMBER, 30TH, 1898.

To Robert Christie, Esq., Inspector of Asylums and Public Charities of Ontario :

SIR,—In accordance with the statutory requirement, I have the honor to submit the forty-third annual report of this Hospital, (the twenty-first since it became a Provincial institution) for the year ending September 30th, 1898.

	Male.	Female.	Total.

ADMISSIONS.

The seventy-nine cases admitted represented almost the total number for whom application was received, and we were able without much trouble to meet the demands made for the accommodation of the insane of this district. It was gratifying to know that only eighteen of the applicants were sent to the goals, prior to admission, and it is to be hoped the warrant system will eventually be resorted to only in cases of extreme urgency. The unfavorable nature of the cases admitted will be referred to further on in the report. Of the seventy-nine no less than fifty-one were hopelessly chronic and beyond the reach of medical aid.

A rather remarkable fact to be recorded is that no case of general paresis was received.

DEATHS.

The death rate was abnormally high, about six per cent. of the total number under treatment. It is gratifying to be able to record the fact that no suicide or regrettable accident of any kind occurred. No matter how great the care exercised, it is impossible to anticipate all of the acts of the impulsive insane, and the greatest worries in connection with the management of an institution such as this, are those arising from the care of the suicidal and homicidal. We are under deep obligations to Dr. W. T. Connell, Pathologist of Queen's University, who kindly conducted nearly all of the many post mortems made during the year. It has been of the greatest assistance to have the services of a skilled pathologist at our disposal and the results of his investigations cannot help but be of value.

## ACUTE AND CHRONIC INSANITY.

There is a prevailing impression that insanity is a disease which is steadily increasing, whereas the generality of Hospital physicians are inclined to the belief that acute insanity is not as common as it was some years ago, and when we begin to analyse the question critically we realize that the latter opinion is the one nearest the mark. It is true that our Hospitals for the Insane are crowded at all times, and that as fast as accommodation is provided, patients are found to fill the beds, but in the majority of instances the applications are not for acute cases, but for patients who have long since passed the curable stage.

In table (Acute and Chronic Insanity), are to be found some very interesting facts. A brief analysis shows that of 1071 admissions from September 10th, 1889 to September 30th, 1898 no less than 64% of those admitted were suffering from chronic insanity, in other words had been insane, in many instances, for years before being sent to a Hospital for the Insane. Only 36% of the admissions were acute, and many of these so called acute cases could be classified as chronic, if friends had told the truth when furnishing the information asked for in the Form of Application. It is difficult to make people understand that the majority of those admitted are suffering from chronic insanity, and it rather upsets the theories of many who talk glibly of the rapid increase of insanity to learn that this supposed increase, is owing, not to the occurrence of acute disease, but to the growing custom of sending chronic insane patients to Hospitals for care, rather than attempting to keep them at home. The growing confidence in institutions has its uses and as we well know, its abuses also. While it is reassuring to those of us who have the responsibility of caring for the unfortunate insane, to realize that the public have a large amount of confidence in our ability to nurse those who are hopelessly bereft of reason, it would be far more satisfactory if the majority of cases of insanity could reach here in the acute stages. It would be better for us, better for the patients. No one would attempt to deny the self evident truth that a man who has devoted his attention to diseases of the eye is more competent to deal with such affections than one who sees eye cases only at rare intervals. Nurses specially trained will do better work in carrying out the treatment suggested than those who are not familiar with the peculiar requirements of particular cases. These arguments apply in the care and treatment of insanity, and while it is true that we have not been carried away by fads involving the discovery of panaceas for every form of mental alienation, our efforts to cure have not been in vain, in the large majority of cases of acute insanity. In arriving at these results, intelligent and devoted nursing by the trained nurses and attendants has played no unimportant part. When patients have required surgical aid they have received it, and the endeavour has been to apply the best methods known for the alleviation of mental distress.

In the period referred to, 394 acute cases were admitted and of these 319 recovered and in the great majority of instances remained permanently benefited. That is to say no less than 81 per cent. of the acute admissions made good recoveries, a result that should speak more eloquently than any feeble attempt of mine to show the advisability of early treatment in Hospitals for the Insane.

Great care has been taken to classify as "recovered" only those patients who can honestly be put in this class. When it is stated that the majority of those who are discharged from this institution are sent out on probation for periods oftentimes as long as six months, it will be seen that there is ample opportunity to arrive at an opinion regarding the permanency of the cure, in almost every instance.

## TYPHOID FEVER.

About the middle of August a remarkable outbreak of typhoid fever took place. It is true that some years ago typhoid commonly occurred at Rockwood, but only in the early spring. After the boring of deep wells and the completion of a sewage disposal system the disease disappeared from our wards, consequently we were much concerned, when typhoid reappeared this summer, and we went diligently to work to determine the possible

cause. It was somewhat extraordinary that all of the eight cases, but one, developed at the same time, and it was clearly demonstrated that those who contracted the disease had received it from a common source of infection. One naturally turns to a polluted water supply as the probable medium by which the typhoid bacillus is carried to a person who has developed enteric fever, but we know that in summer Lake Ontario water near this institution is practically free from suspicion, and our deep wells contain water free from all danger of contamination. Then the peculiar fact that all of the cases had no doubt been infected on the same day, was such a striking one that it made it a comparatively simple matter to suggest the probable cause. Last winter the ice in Kingston harbor formed as usual, but was subsequently broken up by a violent storm. This harbor ice did not float down the river as it ordinarily does, but drifted from shore to shore for a time, and was then frozen together again. In this way the very thin ice from which we could obtain our supply during the unusually mild winter, contained cakes which came from different parts of the harbor. As Dr. Goodwin pointed out in making a report to the city authorities regarding the purity of last winter's ice supply, specimens of ice from what is usually regarded as the safe zone contained more bacteria than specimens of ice cut nearer shore. No doubt our typhoid patients who had been drinking large quantities of ice water, were unfortunate enough to have used ice contaminated by the presence of typhoid bacilli. This probability is rendered greater as the majority of those affected were employees who had access to ice water. For years it was customary for the Kingston people to call a good deal of attention to the matter of the contamination of their water supply by Rockwood and the Penitentiary, and I always felt that they had a good case, although it was somewhat surprising that they did not seem to realize that some sources of infection much nearer their main water pipe than those referred to, might be a menace to the health of the community. The Dominion and Ontario Governments realized that they should set a good example to the people, and at a considerable outlay erected sewage disposal works, which no longer left any reason for complaint, on the part of the City authorities, regarding the contamination of the water supply by sewage from these institutions.

The question now arises, have not we ample reason to complain of the menace to the health of our households by the neglect of the City to provide for the proper disposal of its sewage. Some large drains enter the lake at points not so far remote from Rockwood that they can be classified as harmless, and now that the danger to the ice supply has been fairly demonstrated, both by Dr. Goodwin's report and our own experience, the City should certainly be asked to consider a question of vital importance to its best interests. It is only fair to say that the Kingston press has not been negligent in calling attention to the advisability of considering a better form of sewage disposal than that in use in Kingston at present.

#### OUTBREAK OF TUBERCULOSIS IN HERD OF MILCH COWS.

Early in April it was said that tuberculosis had been discovered in some of the dairy herds about Kingston, and shortly before this date your attention was called to the appearance of several of the cows in our herd. These animals were not thriving as they should under the favorable conditions which existed, and clinical tests revealed the fact that all had elevated temperature, and in one case there was marked consolidation of portions of the lungs. Prompt measures were taken to discover the true state of affairs, and as suggested by the Honorable the Provincial Secretary and yourself, radical means were adopted to ascertain the full extent of the disease and to eliminate all source of danger to the health of the patients. As soon as tuberculosis was suspected, all milk supplied by cows apparently healthy was pasteurized; milk from cows under suspicion not used. The tuberculin test was applied to the whole herd, and from reactions shown, it was evident that the majority of the cows, forty-one in number, were diseased. Dr. Morgan, V.S., applied the tests, and conducted the post mortems, which were in nearly every instance noted also by Dr. W. T. Connell, Pathologist of Queen's University, Dr. Webster, Asst. Physician, and myself. The first cow examined was undoubtedly the one from which the rest of the herd received the infection and the extent of the disease in that particular

case was very remarkable indeed. As the examination proceeded the accuracy of the tuberculin test was thoroughly established, and the object lesson so striking that it would be a pity not to publish in detail the *reactions* after the injection of tuberculin, and the results of the post mortem examinations. Appended find these results. It may be added that careful microscopical examination by Dr. Connell and myself demonstrated the presence of the tubercle bacillus. Any persons in the community interested in the subject of tuberculosis among cattle were freely invited to witness the post mortem investigations, and many took the opportunity to advance their knowledge of the subject. There was some difference of opinion regarding the advisability of using any of the meat, but in view of the extreme virulence of the outbreak, and the possibility of danger in eating meat from animals suffering from a general tuberculosis, it was felt that there was only one course to follow, viz: to destroy all of the meat. The arguments in favor of that course were unanswerable, and when it was remembered that the insane are more susceptible to the development of tubercle than any other class, there was no hesitation in burying the carcasses of the infected animals, as soon as post mortems were concluded. The conditions surrounding these cows could not be called unsanitary, as the stables are new and carefully constructed, and embody nearly all of the most approved requirements. The air space for each animal is ample, and the outbreak can be regarded merely as a startling example of the contagiousness of tuberculosis in cattle. The stables have been sprayed several times with corrosive sublimate solution, fumigated with sulphur, and whitewashed with lime and phenyle, and have been unoccupied all summer. All cows purchased since April have been submitted to the tuberculin test and in future no cow will be added to the herd unless tested by a competent authority.

#### SPRAY BATHS FOR WEST WING.

The spray baths and new closets in the addition to the East Wing have proved such a success that it is to be hoped a similar improvement will be made to the West Wing. Such an addition is, as you are aware, a necessity, and the present unsatisfactory condition of affairs, particularly as concerns the closets, should not be allowed to exist for a longer period.

#### HOME FOR NURSES.

In last year's Annual Report I referred to the advisability of building a small home for nurses who are not on duty. The arguments which then applied still exist, and the expenditure need not be large. Our patients could easily quarry the stone required for such a home; make the necessary excavations, and do much of the ordinary labor in connection with the building operations. As the staff of nurses is not large such a building would not require to be of great size, and a very reasonable expenditure would insure an improvement that would prove a great boon to those who have long ago earned far more recognition than we have, with our limited resources, been able to give them.

#### AFTER-CARE OF THE INSANE.

In Ontario it cannot be said that there is a dearth of societies formed, presumably for the benefit of humanity, and yet strange to say a very practical question, which has long ago received recognition in European countries has been overlooked; and here charitable people have not yet felt the necessity of establishing a society for the After-Care of the needy insane. In every institution in Ontario are to be found a certain proportion of patients, who could get along very well in the world if they were to receive very slight protection and care from an After Care Society; patients who would then cease to become a burden to the Government, and who could earn their own living, and thus become useful members of society. In Great Britain, Germany, Switzerland and Italy, After-Care societies have been established for many years and have prosecuted their work with increasing enthusiasm and benevolence. The arguments in favor of the establishment of such societies are many. Some patients after an attack of acute insanity are never again able to endure the strain of struggling unaided for a living. They need to be helped over

the rough places in life, have their work mapped out for them and require to be guided past many dangers. Commonly their own relatives distrust them, they are marked men in the eyes of the prejudiced and ignorant, and instead of sympathy they receive harsh and cruel treatment even in their own houses. They return to hospitals sorrowfully, but as they have said time and again willingly, because they find little sympathy outside for their affliction. Not only that, many a discharged patient cannot live in his own community, if at all eccentric, without exciting the heartless cruelty of thoughtless boys and young men who seem to delight in persecuting the one who has fallen under the shocking blight of insanity. Time and again we have made the experiment of sending harmless and trusted patients out on probation with the hope that with ordinary care and kindness they could get along as satisfactorily as they did within the sheltering walls of a hospital. In nearly every instance the result is the same, especially when the unfortunate is without friends, or where he is repudiated by those who have been ashamed to acknowledge that "blood is thicker than water." If Prisoners Aid Societies are commendable, how much more can be said in favor of Societies for the After-Care of the Insane. We would willingly undertake this work ourselves if it were practicable, but find it impossible to do so for reasons which are self evident. Some of the experiments made on a small scale show that much could be done by intelligent effort. Not only does the remark apply to those patients who are discharged bearing the scars of disease, but also to many of those poor persons classified as fully recovered. Many of these are of unstable nervous type and need protection far more than robust and healthy types. They are frequently without relatives and without money, and when they leave us, necessarily encounter many hardships which they are ill fitted to endure. Lack of employment, shelter, food, clothing, exposure are all encountered; in fact the very conditions necessary to produce a relapse, in which chance of recovery is very much endangered. We are powerless to remedy matters, but a well managed After-Care Association could do wonders. Canada has been criticised for its neglect of this important question, but no doubt the defect will be remedied when attention is drawn to the matter. The people of the United States have been quite as negligent as the Canadians in regard to the After-Care of the Insane, but recently the Neurological Association has made a report on the necessity of After-Care and no doubt some practical effort will be made to meet the demands of the case. In their report particular stress is laid on a point already referred to under a different heading, viz.: the importance of early hospital treatment in acute cases of insanity.

The Government cannot fairly be asked to assume the burden of the After-Care of the insane, as it already does all that can be expected, and it is to the benevolence of the community at large a special appeal should be made in forming After-Care Associations.

I have the honor to be, Sir,

Your obed't servant,

C. K. CLARKE,

Medical Superintendent.

TUBERCULIN TEST AT ASYLUM, KINGSTON, PROVINCE OF ONTARIO

## POST MORTEMS.

1. Bronchial glands, lungs and liver infected with tubercle—Several masses of degenerated tuberculous tissue in lungs—Liver contained many tuberculous areas—Bronchial glands infected.
2. Mesenteric glands tuberculous—Liver showed tuberculous area in which ulceration had taken place—Tuberculous nodules about intestines—Caseous-degeneration.
3. Small tuberculous areas throughout liver—Tuberculous nodules in mesentery—Caseous-degeneration.
4. Evidently recently infected—Small nodules throughout intestines and mesentery—Many areas of ulceration beneath nodules and about glands.
5. Tubercle well marked in mesenteric glands—Large areas of degeneration in liver—Several well-marked areas in lungs and intestines.
6. Far advanced in tuberculosis—Lungs, liver, intestines, mesentery deeply involved, in fact the cow was a mass of tuberculous disease.
7. Intestines full of tuberculous nodules—Miliary tubercle of liver—Many tuberculous nodules in lungs.
8. Healthy looking cow when alive—Mammary glands tuberculous—Intestines much affected, some nodules as large as hazel nuts—Liver almost as much affected as that of No. 6—Some areas of infection as large as a walnut—Lungs far advanced in disease—Cavities and nodules.
9. In the earlier stages of disease—Intestines full of hard tuberculous nodules—Mesenteric and bronchial glands markedly affected—Lungs markedly affected—Liver affected.
10. Liver contained large areas of tubercular infection in the stage of caseous degeneration—Intestines markedly affected.
1. Intestines largely involved—Mammary gland shotty—Liver full of tuberculous nodules of size of hazel nuts—Lungs tuberculous.
2. In earlier stages nodules in lungs—Intestines tubercular—Spleen atrophied and hard—Miliary tubercles and cavities in liver.
3. Intestines tuberculous—Liver had several patches of miliary tubercles—Lungs tuberculous.
5. Intestines and mesenteric glands in earlier stages of disease—Miliary tubercle in liver—Oow in better condition than any others examined, was a comparatively recent addition to herd.
6. A healthy cow as far as external appearance was concerned—Intestines a mass of tubercular disease—One of the worst cases examined—Mammary gland tuberculous—Liver tuberculous—Some of the areas of degeneration as large as a large nut.
7. Intestines largely affected—Many nodules—Mesenteric and mammary glands tuberculous—Lungs with marked tuberculous area.
8. Intestines full of tuberculous nodules in stage of caseous degeneration—Lungs markedly tuberculous—Liver also infected.
9. Lungs contained large cavities—Miliary tubercles in liver—Intestines full of tuberculous nodules—Caseous degeneration.
10. Intestines, lungs and liver tuberculous, in earlier stages of disease.
1. Mammary glands tuberculous—Areas of caseous degeneration in lungs—Intestines tuberculous.
2. Stomach involved—Liver markedly tuberculous, also full of small infarcts—Bronchial glands enlarged—Intestines tuberculous.

23. Intestines tuberculous—Omentum covered with large tuberculous nodules—Liver had many tuberculous areas, one as large as an egg—Bronchial glands tuberculous.
24. Intestines tuberculous—Miliary tubercles in liver—Bronchial glands tuberculous in stages of caseous degeneration.
25. Intestines tuberculous—A most marked state of disease, enlarged bronchial glands—Miliary tubercle of liver.
26. Intestines, lungs and liver markedly tuberculous.
27. Many tuberculous nodules in intestines—Lungs congested—Bronchial glands diseased—Large nodules—Caseous degeneration in liver.
28. Mammary glands, intestines and liver tuberculous—Lungs with caseous tubercular nodules.
29. Intestines and apex of one lung tuberculous—Miliary tubercle of liver—Local peritonitis.
30. Cow very weak, scarcely able to walk, although well nourished—Intestines located with tubercle—Mesenteric and mammary glands tuberculous—Liver tuberculous—Bronchial glands enlarged.
31. Intestines tuberculous, markedly so—Large numbers of nodules in various stages of degeneration present.
32. Intestines tuberculous—Miliary tubercles in liver—Lung nodules—Bronchial glands and mammary glands tuberculous.
33. Intestines tuberculous—Liver markedly tuberculous—Bronchial glands tuberculous.
34. Miliary tubercles in liver—Mesenteric and bronchial glands infected—Intestines tuberculous.
35. Lungs largely involved in tuberculous disease—Intestines and liver tuberculous.
36. Intestines tuberculous—In lungs and bronchial glands nodules in state of caseous degeneration.
37. Intestines tuberculous—Miliary tubercles in liver—Lung nodular—Bronchial and mammary glands tuberculous.
38. Intestines full of tuberculous areas—Liver filled with masses of tuberculous matter—Some of the areas being an inch and a half in diameter—Lungs had many tuberculous nodules.
39. Intestines, a few small nodules—Liver, numerous well-developed nodules—Lung, caseous mass size of a hen's egg—Bronchial glands markedly affected.
40. Intestines, multitudes of nodules both large and small.
41. Intestines, multitudes of large and small tuberculous nodules—Abscess in kidney—Probably pyaemic.

## ANNUAL STATISTICAL REPORT.

TABLE No. 19.

Showing amount of mason work done during the year ending 30th September, 1898.

Locality.	
Gas house .....	Bricked up ends of gas retorts. Repaired brick work of single retorts and built brick work of new ones. Built in water trap. Built up end of retorts a second and third time. Built brick work for furnace.
New court .....	Built in one pot ash kettle, and removed two others. Rough cast portion of building.
Piggery .....	Built in agricultural kettle; broke wall for passage of water pipes and repaired the same; dug well, and stoned the sides.
Centre building.	Plastered closets on 2nd and 3rd storeys, and mended broken places. Matron's room. Broke away brick and stone wall for fire place, and laid bed for hearth foundation.
Male wards .....	Plastered with cement and lime 40 yds in No. 9. Broke away brick arches for passage of water pipe in Nos. 4, 6 and 8.
Female wards ..	Plastered 30 yds in Wards No. 5 and No. 7.
Laundry .....	Plastered with cement and lime 30 yds. Built drain and manhole for passage of pipe.
Blacksmith shop	Drilled stone wall for passage of steam pipe, repairing the same. Set foundation for engine, blow pipe, etc.
Gardner's house.	Packed around cellar door with stone and mortar.
Engineer's house	Built in door frame in cellar.
Med. Sup. house	Cut 30 ft. stone, bush-hammered, and 30 ft. stone, tooled Sill course, built and backed the same with brick, pointed and finished same. Prepared foundation for gas fire place, and tile hearth.
Boiler house .....	Cut 40 ft. curb stone and laid the same. Laid new brick floor front of boilers and passage. Built up hole in stone wall at ash shoot. Fixed fallen and loose bricks about the large boiler and main flue. Built pillars to support pipe for new boiler. Lifted stone flags and laid new ones. Built stone covers for steam pipe drain.
Vinery .....	Cut and laid stone door sill, filled remaining space with cement flooring. Built brick walls for two soil pits for vines. Leveled and laid cement floor.
Cement wall .....	Cut and dressed three stone steps 12 ft x 4. Repaired man hole for sewerage drain. Laid cement walk 510 ft. x 4.
Kitchen .....	Repaired two fire places
Store .....	Built up space left by removal of driving shaft.
Farm house .....	Repaired some yards of plastering and rough casting, after new steam fittings.

TABLE No. 20.

Showing the amount of painting and glazing performed during the year ending 30th September, 1898.

Locality.	Painted.	No.	Yards.
New court.....	Walls and woodwork of front room, sitting room, halls, kitchen, pantry and bath room. Outside: West and south ends of building, verandah roof and cow stables.....		990
S. cottage.....	1 dining room, 6 bed rooms, hall and ceilings, 3 sitting rooms. Outside—3 verandahs, floors steps and roofs.....		640
Med. Sup. house.....	Ceilings, walls and woodwork, registers, bedsteads and bookcase. Outside—conservatory and greenhouse.....		280
Beechgrove.....	2 rooms, ceilings, walls and woodwork. Outside—3 verandah floors and steps; varnished 3 outside doors.....		180
Farm house.....	3 rooms, ceilings, walls and floors. Outside—south side of building and verandah.....		285
Wards.....	Touched up all woodwork in Ward No. 1 and Ward No. 3; painted all woodwork of dining room, octagon, sitting room, hall and dormitories in Ward No. 2; the walls, sitting and dining rooms, octagon and woodwork in Ward No. 4; painted sitting room, woodwork and touched up the walls in Ward No. 5; the dining and sitting rooms, 2 halls and octagon in Ward No. 6; the dining 10 m and all woodwork in Ward No. 7; the dining and sitting rooms, hall and all woodwork in No 8; bath and closet walls and all the woodwork in Ward No. 9.....		1,820
New wing.....	4 bath rooms, 4 wash rooms and closets, 4 clothes rooms and 4 halls with dados and decorations.....		1,020
Steward's room.....	Ceiling, walls, and woodwork of sitting room.....		40
Matron's room.....	Ceiling, wall, and woodwork of sitting room and bath room.....		90
Furniture, etc.....	Painting and varnishing 120 common chairs, 15 rocking chairs, 7 tables, 3 bookcases, 20 curtain poles, 3 waggons, 1 cutter, and bronzing 14 chandeliers, and 15 radiators.....		
Glass set.....	Throughout the institution..... ft.		1,800

ANNUAL REPORT OF THE MEDICAL SUPERINTENDENT OF THE  
ASYLUM FOR THE INSANE, HAMILTON, FOR THE YEAR  
ENDING SEPTEMBER 30th, 1898.

Hamilton Asylum, October 1st, 1898.

*To Robert Christie, Esq, Inspector of Asylums, Ontario.*

SIR,—I have the honor to submit herewith the Twenty-Third Annual Report of this Asylum for the year ending September 30th, 1898.

The statistical tables annexed give such a complete record of the whole operations of the asylum during the year, that it will not be necessary to duplicate the figures here and I shall content myself with a summary of the work done during the year, together with a statement of our probable requirements for the future.

We began the official year with 966 names on our register, and at its close there are 997, showing an increase of 31. We admitted 147 new cases during the year, against 173 last year, showing an apparent decrease of 26, but 22 of the admissions last year were transfers from other asylums. The total number under treatment during the year was 1,113, of which 533 were women and 580 men. The number discharged as recovered is 54, the number discharged as recovered and improved is 64, or  $43\frac{1}{2}$  per cent. on the admissions during the year. The number who died during the year is 46, against 47 last year, which is 4 1-10 per cent. on the whole number under treatment. The number of discharges during the year is 69, 46 died and 1 eloped, making the total discharges 116.

INCREASE OF INSANITY.

A perennial stream of lunacy continues to pour in upon us from this asylum district at an average of about 150 each year. The discharges by recovery and death average 120, leaving an annual residue each year of about 30 to be provided for. This annual increment of insanity appears to be entirely out of proportion to the natural increase of population, and at once raises the question of providing accommodation for them. It also raises the pertinent question of the cause or causes of this apparent rapid increase of insanity, and whether any remedy can be suggested to stem this tide of mental incapacity which flows in upon us like a mountain torrent. It is important to know whether or not this increase is real or apparent. It is evident that the old prejudice against asylums is rapidly dying out, and that many cases which were formerly cared for at home are now sent to the asylum. Again the very liberality of the Government in providing such ample accommodation at cheap rates or even free, acts as a powerful stimulus in deciding to transfer the burden from the home to the State. Every superintendent has experience of the desire to impose on the generosity of the state by seeking admission for old and helpless people whose only mental weakness is the dotage of age. But yet making due allowance for all this, there seems evidence to prove an abnormal increase of insanity.

In the Province the census and Provincial returns show an increase of population from 1871 to 1895 of 36 per cent., while the increase of the insane for the same period is 245 per cent. The rapid increase of insanity in England suggested to the Lord Chancellor the necessity of a special enquiry and report from the Commissioners in Lunacy as to whether it was due to real or apparent causes. The result of their researches as submitted in a special report went to show that, whereas in 1859 the number of lunatics, idiots and persons of unsound mind in England and Wales reported to their department as resident in asylums and workhouses, or with their relatives or others, was 36,762, the number had increased in 1896 to 96,446, showing a ratio to every 10,000 of the population of 31.38 as compared with 18.67 in 1859. Or, making another calculation, the pop-

ulation of England and Wales had increased 56 per cent. from 1859 to 1896, while private lunatics had increased 76 per cent., criminal lunatics 12 per cent., and pauper lunatics 178 per cent., making a total increase of lunatics of 162 per cent.

The next question the commissioners had to decide was whether this increase was due to insanity producing causes, or to the ampler accommodation provided and consequent increased registration. While admitting the vast increase of the pauper insane, they endeavor to explain it on the ground of greater accuracy of registration. They say there are fewer lunatics in workhouses and more in asylums, that the low recovery and death rates tend to perpetuate their lives and thus form an ever-increasing residue of population. That asylums are now more popular among the people, and more cases of senile mania are sent to the asylums than formerly.

The Commissioners started out with the assumption that the keen and restless spirit of the age had made such enormous drafts upon the mental resources of the people that it would be easy to formulate a theory to account for the rapidly increasing ratio of mental disorder. The result of the investigation completely negated this assumption for they found that the number of private lunatics was actually lower in 1896 than in 1879 and is still undergoing an annual diminution. The popular opinion of the day is that the vast increase of insanity is due to the restless spirit of the age, the intense competition in business and the break-neck struggle for wealth and social position. No doubt there is an element of truth in this opinion, but to rank it as the great pre-disposing or exciting cause of insanity is nothing short of a popular fallacy. Experience proves that the educated classes, the busy men of affairs who propel forward at such a rapid pace the great industrial, commercial and social forces in the world do not figure prominently in our asylum statistics, but that the mass of lunatics come from the uneducated lower strata of the people, the raw materiel, as it were, of society.

The remedy seems to lie in a general uplifting of the masses by educational and moral forces. Poverty and vice must be credited with a large proportion of the insanity and crime in the world. The struggle for existence is so intense that only the fittest survive, the weakly endowed falter by the way and unable to compete in the struggle they soon become a burden on one or other of the charitable or penal institutions of the country, from which many of them go to swell the ranks of the pauper insane. There is a lamentable amount of ignorance in the world in regard to the laws which govern health and the propagation of the race and all agencies at work for the dissemination of correct knowledge on these subjects should command our best consideration.

The law of methodical selection is generally understood in breeding improved types among the lower animals, but largely ignored in breeding an improved type of men and women. Some advocate the interference of the state and the enactment of stringent laws for the regulation of marriage; they would prohibit those close of kin and the whole class of mental degenerates from marrying. Others go further and advocate the asexualization and emasculation of the mentally weak and of the incorrigible criminal as well. If such a law could be enforced it would certainly improve the race and lessen crime, for after all criminals are nothing more or less than mental degenerates. I fear public opinion is not yet educated up to the point of demanding such a law, for we have evidence of a strong opposition to any law interfering with the social customs and habits of the people.

The law of hereditary transmission of mental and bodily defects, haunts us with a persistence only equally by its universality. Let us not forget that whether we have fair skin or dark skin, light hair or dark hair, a long nose or short nose, a strong mind or weak mind, they do not come by chance, but were settled by our parentage before we were born. The transmission of bodily defects is equally persistent, and we are born into the world with a predisposition to live long or short and die of the same diseases that our parents died of before us. The law of self-preservation and the duty which each individual owes to society demand that no person shall enter the marital state without a proper sense of the tremendous issues at stake. The ability to transmit to posterity a decent progeny endowed with all the mental, physical and moral attributes essential

to good and useful citizenship is the most momentous question the human race has to deal with.

Notwithstanding the truth of the general law that like begets like we are constantly reminded by the law of atavism, of our savage ancestry, and that nature's constant tendency is that of reversion to ancient types, by the human degenerates born into the world in spite of the best breeding and most careful training. The struggle between evolution and devolution by a process of natural selection and of the survival of the fittest is ever imminent. Our boasted civilization is but of yesterday, comparatively speaking, and has been won through a gradual process of evolution reaching back through the long vista of the past. It is not to be wondered at then, that nature occasionally produces a "lapsus naturae" even from the best parentage and that a lunatic, an idiot or a criminal is born into the world. As time rolls on and the present rate of progress continues, nature will show greater stability in transmitting improved types and thus the race will tend to reach a higher plane of mental, moral and physical excellence. Of course this gradual ascent of the human race will be greatly accelerated or retarded in proportion to the constancy with which these great natural laws are applied or subverted as the case may be. There are two great forces in operation which regulate the universe, moral and physical, and neither of them can be violated with impunity. The closer we follow the teachings of both these great laws, the more rapid will be our ascent toward higher ideals of character, as well as material progress in life.

#### RATE OF MAINTENANCE.

The rate of maintenance this year is \$112.72 per capita against \$115.82 last year, showing a reduction per capita of \$3.10. I thought last year our rate was abnormally low and that we had certainly reached a rock bottom expenditure, and I was more than surprised to find that this year we had reached a still lower rate. Our per capita rate of expenditure has been gradually decreasing for several years, but the past year is a record breaker in the history of this asylum.

I almost feel it my duty to offer an apology, as I fear I am open to the charge of a too parsimonious administration, and yet after thoroughly examining every department of our work I am at a loss to know wherein anyone has suffered. Our patients were never better fed or better clothed, our furnishing and equipment is first-class in every particular, our halls are models of neatness, comfort, and even luxuriance. The large majority of our patients never enjoyed such comforts in their own homes. Judged by the standard of results, it has never been my privilege to present so favorable an all round report as this year. The number discharged recovered and improved is 43½ per cent of the whole number admitted during the year and only five were discharged unimproved. The death rate is four per cent of the whole number under treatment, which is away below the average asylum death rate.

#### HOSPITAL.

The Hospital was opened for the reception of patients on the 22nd of July, and there are at present twelve men and seventeen women undergoing treatment there. The building occupies a beautiful location and is conveniently isolated from all the other buildings. In architectural design it presents a handsome and ornate appearance, is three stories in height and is well adapted for the purpose in view. The internal construction is finished in first-class style, with dormitories and single rooms, the plastering is of hard finish cement, the floors of maple and steel ceilings throughout. The ground floor is occupied with physician's office, reception room, dispensary and operating room, the latter has a tile floor and the wall is wainscotted with white marble five feet in height. It is also furnished with an operating table of modern design and an instrument cabinet well stocked with the most improved surgical instruments, fitted to perform any surgical operation known to science, also a sterilizing apparatus of the most improved design. There

is an elevator large enough to carry a bedstead, by which a patient may be carried from one floor to another as necessity or convenience may require. Each floor has its bathroom and water-closet, semi-detached, also a dining-room and nurse's room. On the first floor is the head nurse's parlor and bedroom, also nurse's room, dormitories and single rooms. The second floor is set apart entirely for men and has no private apartments except the nurse's room. At the rear is the kitchen with rooms overhead for a cook and housemaid. The whole building, in design, equipment and furnishing is a marked expression of the tremendous advance in medical and surgical science.

It also typifies in a remarkable degree, the immense progress which spans a century of time, in the care and treatment of the insane, and stands a monument of the wisdom and beneficence of the Government in providing so liberally for their comfort. It is gratifying to know that public opinion marches step by step with science in everything pertaining to the amelioration of the sad condition of the insane and that no word of complaint is ever heard against any judicious expenditure having that end in view.

Miss Cadenhead, a graduate of the Hamilton General Hospital, was appointed to the general charge of the Hospital, and is ably assisted by a staff of male and female nurses, selected from our regular staff of nurses, each nurse serving on the hospital staff for a period of two weeks in rotation. In that way we hope from the training which each nurse receives at the hospital from practical experience, together with a course of lectures from the medical staff, to inaugurate a training school for nurses equal to any general hospital.

While we have made ample provision for those physically as well as mentally afflicted, we rejoice to know that less than five per cent of our population require special hospital treatment. The large majority of our patients are physically healthy and their treatment is largely of a moral and disciplinary character. Experience proves that well directed mental and physical exercise on industrial and educational lines are the means we must trust to for restoring discordant brain function. A wide field in this direction waiting to be exploited, unfolds itself to our view, and how to utilize it by well-directed, concentrated, systematic effort is a problem which presses upon us for solution.

#### FARM AND GARDEN.

The products of the farm are well up to the average with the exception of the root crop. The intense drought during the months of July and August was very trying. Turnips and mangolds did not braird well and there were consequently numerous blanks. The early potatoes were a failure, the late varieties had the advantage of frequent rains and turned out a fairly good crop.

We threshed 550 bushels of fall wheat and 233 bushels of spring wheat, also 1810 bushels of oats. The hay crop was excellent, amounting to 160 tons. Corn was a fair crop and 220 tons were cut and placed in the silo. We sold 165 hogs for which we received \$1,222.58. This is rather below our average receipts. I refer you to the table appended to this report for a detailed statement of the products of the farm with an approximate valuation.

Besides the ordinary work of our farm our teams were engaged during the winter in hauling 110 loads of gravel from the beach, also thirty loads of sand and forty loads of stone from the quarry for roadmaking and building purposes. In field draining 106 rods were laid with tile. Besides general repairs sixty rods of picket fence was constructed.

The products of the garden are a comparative failure, and never in my experience has there been such a poor return. As the garden comes very closely in touch with our dietary the loss has been severely felt. The gardener attributes the failure to lack of fertilizers and the severe drought, and there is no doubt an element of truth in this, but I doubt if this accounts for the whole of it. The ornamental grounds also suffered from the drought but were well looked after and at the time of writing this report are exceedingly beautiful.

## ELECTRIC LIGHT AND POWER.

The question of light at the asylum has been a perplexing one for years. The gas main from the city is a 4-inch pipe and was intended to supply an institution of one-fourth our present capacity. Large additions have been made from time to time to the original building and East House, Orchard House and Hospital have since been added, so that when the full number of jets in all the buildings are in active consumption the light is very defective. The gas company suggests the putting down of a larger main from the city which they say will overcome the defect.

It cannot be denied that for safety as well as healthfulness electric light is superior to gas. The question of relative cost is of course a prime consideration in deciding a question of this kind. For the year ending to day we expended \$3,795.79 for lighting. This is a large sum and it is certainly worthy of our best consideration to enquire whether or not a change to electricity would effect any substantial reduction and at the same time furnish us with a more effective light. It is said the Cataract Power Company are prepared to furnish electric light and power in Hamilton at a cheap rate, and I understand the Company has already effected an agreement to light the city of Hamilton and that many manufacturing concerns are negotiating with the Company to furnish electric power instead of steam. It seems evident that the whole question of light and power in the city is to undergo a complete revolution in the near future.

Another heavy item of expenditure is for water. Last year we paid to the city for water \$3,021.07. The water has to be pumped from the Queen street pumping house up the mountain to the reservoir. It has then to be pumped from the reservoir to the high level tanks for purposes of pressure. At Queen street there is a costly plant for pumping by steam. On an average 200 tons of coal screenings are consumed at an average of \$1.80 per ton for hard and soft screenings, which is equal to \$3 60 a ton for fuel alone. Two large boilers have to be kept in order and this year a new one is put in to replace an old one condemned. At the asylum an equal quantity of coal is consumed in pumping the water from the reservoir to the high level tanks, except that hard coal is used at a cost of \$4 87 per ton for 200 tons, which is equal to \$974.00. For fuel alone the cost of pumping our water amounts to \$1,334.00, this added to \$3,020.07 the amount we pay the city makes a total cost of \$4,355 07. The wages of two firemen and the loss from wear and tear in keeping up boilers and fire grates are not included. It is a question for consideration whether or not this large expenditure could be materially reduced by utilizing electric instead of steam power.

## CAPITAL EXPENDITURE.

An appropriation of \$500 was made for building a house for one of the farm hands. This work has been all done by asylum labor and is now approaching completion. Appropriations were also made for an iron fence and gate at front entrance to avenue at James street, also for alterations to water-closets and bathing system at main building, also for a new ice house, but for some reason these works have not been gone on with. The water-closet system at the main building is antiquated and insanitary. The bath tub system is inconvenient, uncleanly and extravagant in the use of water. I trust a substantial grant will be made next year to renovate the water closets and introduce the spray bath system. I referred last year to the inconvenient and dangerous position of the amusement hall; which can only be reached by a circuitous climbing of stairs and the accident of a fire might be attended by disastrous results. An amusement hall including a chapel on the level would be a great boon to us. A gymnasium and skating rink would also be a welcome addition to our equipment. A house for the gardener near the garden should be erected, since we suffer by stealing of fruit and vegetables sufficient each year to pay the interest on the investment.

## AMUSEMENTS.

The past year has been more than ever prolific in providing amusement and mental recreation for our patients. There was a time when we were largely dependent upon

outside help for amusement. I am glad to say that day has passed away, for by cultivating and utilizing the resident talent among our employees and patients, we are able to furnish on short notice a rich and varied programme of entertainment which is always highly appreciated. Dancing continues to be a favorite form of amusement and when alternated by the performances of our musical and dramatic club, the time passes pleasantly by, the minds of our people are refreshed and invigorated and many disordered minds are thus gently helped onward to a resumption of that mental balance which fits them to resume their citizenship and again return to their kindred and homes. The public have the idea that an asylum is a place of gloom and despair. It is not so, our beautifully kept lawns and richly crowned flower beds and shady groves all proclaim the wisdom and beneficence of an all-seeing Father who watches over and cares for all who are in trouble. The interior comforts and artistic furnishings of our buildings are scarcely less attractive than the exterior, and everything is made conducive to a quiet, happy and contented life. In this I am sure, lies the secret of a happy home whether inside or outside the asylum and in proportion as we reach up to this standard shall we be instrumental in reflecting ourselves for good upon the weak and disordered minds committed to our care.

In winter our somewhat rigorous climate prevents us from indulging in much outdoor sport. The game of curling on the ice for men and skating for women continues to be popular, and many curling matches are played amongst ourselves as well as with outside clubs. A large covered skating rink would be a great boon to us, and I trust you will remember this when the estimates for next year are made up. In summer base ball and bowling on the green are very popular among the men, and tennis and croquet among the women. Our brass band continues to flourish and is every year becoming more efficient. On the warm summer evenings, band concerts are held weekly on the lawns and are very enjoyable. The annual picnic and sports, which is always a gala day at the asylum, were held on the 26th of September, a long programme of events was presented and competed for. Many of our friends in the city contributed prizes for which I return my hearty thanks and everybody was happy. A splendid display of ladies' work was also on exhibition for which beautiful prizes were offered. Mrs. Gibson and Mrs. Charlton of the city acted as judges, and once again put us under obligation to them for their kindness. During the summer the Hamilton Steamboat Company, the Street Railway Company and the Incline Railway Company offered free transportation to 200 of our inmates on a trip to Toronto on the steamer Modjeska, and to all of these companies I return my warmest thanks for their kindness.

#### RELIGIOUS SERVICE.

The Ministerial Association in the city takes charge of our religious service every Sunday morning at 9 a.m. During the summer we hold the service in the beautiful grove at the rear of the asylum. This summer we held no less than fourteen services in this grove. From 400 to 500 patients are seated as decorously and devoutly as within the walls of the most sacred edifice and with our splendid choir and orchestra under the leadership of chief attendant Thompson, sweet songs of praise reverberate among the trees and warble their way I trust to the throne of grace. I need not say the whole service is most refreshing and impressive spiritually as well as healthful and invigorating physically. I again tender to the Ministerial Association my warmest thanks for the regularity with which they minister to our spiritual wants.

#### GENERAL REMARKS.

The past year has been uneventful in everything but good works. We have pursued the even tenor of our way undisturbed by any untoward circumstance. With over 1,000 people in all stages of mental alienation it is always a matter of deep concern to the officer in charge, to know that everything is going well with them. An ever vigilant and not too charitably inclined public is always on the alert to find fault. Many delicate

and perplexing problems have to be solved between patients and their friends outside of the asylum which require careful thought and consideration. The sense of responsibility resting with the superintendent puts him often in a very trying position.

Our East House building being set apart by order in council for the criminal insane of the Province, a number of lunatics are committed to our care who have been charged with the gravest crimes known to the law, and the public look to us for protection against them. A different discipline has to be enforced to insure their safe keeping, which largely increases our responsibility. I am strongly of opinion that the insane criminal should be cared for in a separate institution from the ordinary insane. One of the chief aims of our asylum treatment is to rob it in every way of its penal aspect and make the surroundings as nearly as possible like a home instead of a prison. I need not say this benign influence cannot be harmoniously wielded in an asylum where a section of it is set apart for the care of the insane criminal. I trust the time may soon come when the Government will determine to treat this class in a separate institution.

No changes have taken place among the staff officers since my last report and comparatively few among the employees and attendants. The relations between myself and subordinates have been most cordial, and only a few cases have arisen during the year where any form of discipline had to be enforced. It is often a greater hardship to enforce discipline than to receive it, and I trust all my decisions have been tempered with mercy as well as justice. Where there is so large a number of men and women engaged, there is always a tendency for some one to err, even though the greatest care is observed in their selection. I am glad to report that the past year has been almost free from wayward conduct requiring discipline, and that one and all, from the highest to the lowest, have given to the institution and myself their loyal support.

I have the honor to be, Sir,

Your obedient servant,

JAMES RUSSELL,

Medical Superintendent.

## ANNUAL STATISTICAL REPORT

Of the operations of the Asylum for Insane, Hamilton, for the year ending 30th  
September, 1898.

TABLE No. 1.

Shewing movements of patients in the Asylum for the official year ending 30th  
September, 1898.

October 1 To balance

ANNUAL REPORT OF THE MEDICAL SUPERINTENDENT OF THE  
ASYLUM FOR INSANE, MIMICO, FOR THE YEAR ENDING SEP-  
TEMBER 30TH, 1898.

To ROBERT CHRISTIE, Esq.,  
*Inspector of Asylums, Toronto, Ont.*

SIR,—In accordance with the requirements of the statute, I have the honor to submit the fourth annual report of this asylum for the year ending September 30th, 1898.

	Male.	Female.	Total.
There were in residence on October 1st, 1897.....	297	295	592
Admitted during the year by warrant.....	15	15	30
“ certificate.....	22	36	58
<b>Total number under treatment during year.....</b>	<b>334</b>	<b>346</b>	<b>680</b>
Discharged during year recovered.....	16	14	30
“ unimproved.....	1	.....	1
<b>Total number discharged during year.....</b>	<b>17</b>	<b>14</b>	<b>31</b>
“ died “.....	17	18	35
“ transferred “.....	.....	14	14
“ leaving institution during year.....	34	46	80
<b>Remaining in residence 30th September, 1898.....</b>	<b>300</b>	<b>300</b>	<b>600</b>

ADMISSIONS.

During the official year there were 88 patients admitted to this asylum, and of this number 34 were reported to have been insane over one year, and one other was an epileptic; from this it will be seen that only 53 were suffering from acute mental disease at the time of admission, providing, of course, that the information on this point in the history papers was accurate. It will be observed that of the total number of admissions: 15 were over 60 years of age, and the reason for their admission was more that they should be cared for than that their friends expected them to recover. Of the total number of admissions, 30 were admitted by Lieutenant-Governor's warrant showing them to have been residents for some days or weeks, or perhaps even months, of a gaol before their admission to the asylum, thus in some instances giving them an unfavorable start towards recovery in the course of their mental illness. Considering, therefore, the large number of chronics admitted, and the large number beyond the recovery age admitted, and the unfavorable start of many who were residents of the gaol, there remains but a small number, somewhat under 50, of those admitted whose prospects of recovery could be considered at all favorable.

## DISCHARGES.

The number of discharges during the year was thirty-one and the number of transfers was fourteen. Computed on the basis of the acute admissions for the year the percentage of discharges would amount to sixty per. cent, and if those acute admissions who died during the year were deducted from the actual acute admissions, the discharges would amount to seventy-five per. cent of the possible recoverable patients admitted. But some of those discharges were admitted during previous years, and others admitted during the year will be discharged during the coming year, so that anything like useful deductions from the recovery rate cannot be satisfactorily made.

## DEATHS.

The number of deaths was exactly the same as last year namely thirty-five and of this number fourteen were between sixty and seventy years of age, five were between seventy and eighty, two were between eighty and ninety and one had reached her ninety-first year, showing that a large proportion had reached a good average duration of life. In two instances death occurred from unusual causes: in one case a man who suffered from alcoholic insanity recovered and went out on probation to work for a former employer, but he found the burden of life too great and drowned himself: in the other case a woman who had practically enjoyed the freedom of the institution for nearly a year, and who was apparently happy in her daily occupation in the Kitchen, suddenly and with no warning decided to end her life and did so with the aid of a small cord.

## WATER SUPPLY.

After three years repeated recommendations a well was put down last fall at the pumping station so that now the water enters it by gravity, and by this provision not only is there a considerable saving in the consumption of coal which was formerly necessary to bring the water by suction to the pump, but there is also secured an exemption from polluted water entering at any small imperfections in the joints of the intake pipe. Unfortunately however when the connection was being made between the old intake pipe and the well, at the point of junction between the new pipe and the old one, a defect in one end of a section of the new pipe was soon followed by a break which allowed local contaminated water to enter the well with the usual result under like circumstances, namely an epidemic of typhoid fever among the Asylum residents. On account of the lateness of the season when this work was completed there was no opportunity before the bad weather of the fall to properly inspect it and the break was not discovered till the spring after the fever had furnished strong inferential evidence of the existence of some serious defect. From the time of the appearance of the typhoid cases till the complete restoration and repair of the pipe the supply of water for drinking purposes was taken from the well in the garden and delivered daily to every cottage. After having the necessary repairs made in the broken pipe the Provincial Architect ordered that part near the pier which was most exposed and most likely to be disturbed by heave seas, to be securely rock-bolted to prevent the possibility of the joints becoming loosened or opened by the action of the water and ice. The Architect also secured the services of a reliable diver who calked all the defective joints, and there were many, throughout the whole course of the intake pipe: about one hundred feet from the outer end of the intake pipe a large break was found and repaired with a sleeve. Now at the present writing, for the first time since the water supply system was put in, all the water supplied to the institution is admitted from the outer end of the intake pipe, and the water supply is now what it appears to be, namely lake water taken nearly two thousand feet from the pump.

## DISPOSAL OF SEWAGE.

In the annual report of 1895, I had the honor of pointing out the inadequacy of the present filtration system for the disposal of the sewage of the institution, owing to the presence of soapy water from the laundry in the sewage four days of each week. In the

annual report of 1896, this inadequacy was again pointed out: the danger of polluting the water supply of the institution was indicated; and a better system of land disposal was urgently suggested. In the annual report of 1897, the same question was again reviewed and the provision of a sewage farm earnestly recommended.

When sewage containing saponaceous material is turned upon the filter beds an impervious incrustation soon appears on their surface and on this account from 250,000 to 300,000 gallons of unfiltered sewage have necessarily to be emptied into the lake every week. It is true that this unfiltered sewage is turned into the lake on the east side of the Asylum property, but as the intake pipe for the water supply on the west side of the property is only 400 yards distant and is liable to breakage from storms and ice, the danger of pollution is by no means theoretical even when the outer end of the intake pipe is nearly 700 yards distant from the pumping station. In view of the above facts, I would now again urge upon you the extreme desirability of providing a better method for the disposal of sewage than that at present in operation.

#### GARDEN AND GROUNDS.

The work of laying out and grading the grounds around the cottages has been steadily pursued by the gardener and a large staff of patients during the past year and it has now been sufficiently advanced to indicate in an imperfect way the general design. If a sound body is a prerequisite to a sound mind that occupation which favors the re-establishment of normal physical health will most efficiently contribute to mental restoration. Of all forms of outside manual labor there is perhaps no other variety so useful to men as employment in making and taking care of ornamental grounds and working in a garden, and it would be almost impossible to over-estimate the benefit accruing to many of the male patients here, from the patience, skill and tact exhibited by Mr. Matheson in this department.

The yield of garden products has been large considering the small available garden area and it is devoutly to be hoped that a more extended scope in this direction will be provided before the lapse of another year, by the acquisition of adjacent ground on the west side of the present Asylum property.

#### FARM.

The work at the farm under the management of Mr. Boulton, has been conducted in his usual careful and efficient manner. A good deal of under draining has been done and the yield as shown in the following tables has been such as to prove the most prudent and assiduous attention to the possibilities of the ground. Even in four years there has been a marked improvement in the general condition and fertility of the soil and in a few years more what was at one time an unpromising and unproductive piece of land will have been converted into the most valuable and most productive in the community.

During the past summer an implement shed which has been so long needed for the protection of the farming implements and large wagons from the weather, has been erected by the carpenter.

#### COMPLETION OF CHAPEL AND AMUSEMENT HALL.

Since last year's report was written the Chapel and Assembly Hall have been finished and at the present time the cement floor which will soon be put down is about all that is required to complete the store for use. The Assembly Hall was used for patients' dances during the last six weeks of last winter's season, and it has been used ever since on Sundays for divine service. The accommodation furnished by the hall is ample for the needs of an institution of this size, and the whole structural arrangement and location have proven to be convenient and satisfactory.

## HOT WATER HEATING IN COTTAGES 5 AND E.

I am glad to be able to report that the important work of heating cottages 5 and E. with hot water has been successfully carried forward to completion by the Public Works Department this year and during the coming winter these cottages will be comfortably heated for the first time since their occupancy. As pointed out last year a four-inch steam main was divided in the subway behind cottage 4 into two other four inch pipes, one of these supplying cottage 4 and the other was extended through the subway to cottage 5, the largest of the group, in the vain attempt to supply it with heat. As it was impossible for one four-inch volume of steam to be successfully sub divided into two other volumes of the same size, the supply of steam to cottage 5 was always uncertain and often lamentably insufficient. Nor was this engineering anomaly the only one in the heating of these cottages, for it was found by the engineer when dismantling them that there were 1,260 feet of direct radiating surface in cottage 5, and 1,540 feet of indirect radiating surface, upon which latter columns of cold air were admitted from the outside; so that even if there had been sufficient steam conveyed to the radiating surface to afford adequate heat for the patients, it would have been largely neutralized by the imperfectly heated columns of air entering the large cold air shafts. All this waste of coal and suffering from cold is now happily remedied by the introduction of hot water heating in these two cottages. It would appear, however, that a further extensive saving of coal could be effected in all the other eight cottages by adding somewhat to the direct radiating surface in each cottage and cutting off the indirect radiators. While there will now be no suffering by the patients because of insufficient heat, I would strongly urge on the ground of economy in the coal consumption, the above modification in the steam heating system of the cottages, together with an over-hauling of the return pipes to cause them to operate more efficiently than at present.

## FIRE PROTECTION.

The fire hydrant system when originally put down was so placed as to afford protection to the cottages, Centre Building and Administration Building. In order to provide similar fire protection for the Chapel and Assembly Hall and Medical Superintendent's house, it became necessary to extend the fire hydrant system in the direction of these buildings, and this was done during the past summer by laying two new mains and connecting them with new hydrants situated near these buildings. The labor involved in digging trenches, and laying 1,100 feet of 4-inch pipe for this purpose, added greatly to the ordinary work of the engineer and gardener, but the protective value of the work cannot well be over-estimated.

## SIDE WALK AND CINDER PATH.

The old sidewalk from the Asylum gate eastward to New Toronto had become much worn and out of repair from long use and notwithstanding annual repairs were carefully made, there was always some danger to pedestrians using it. Although this walk was put down by the institution for the accommodation of friends of patients visiting them at the Asylum and also for the use of employees, the necessity for it largely passed away with the extension of the electric railway westward to the Asylum gate. On account therefore of the reduced necessity of its existence—the annual outlay to keep it in repair—the element of danger to those who continued to use it—and the fact that it occupied the space desired by the Cinder Path Association for the extension of their bicycle path westward from New Toronto—the sidewalk was removed this summer.

At your suggestion a cinder path was constructed by institution labor along the whole front of the Asylum property so that the Cinder Path Association will be relieved of the labor and expense of building this somewhat extended section of their path.

---

**PUBLIC WORKS DEPARTMENT.**

The chief works undertaken during the past season by this department were the heating of Cottages 5 and E. with hot water and the repairs upon the intake water pipe in the lake. While the responsibility for the heating of these Cottages was assumed by this department the actual labor connected with removing the old steam pipes from both Cottages, and the placing of the hot water system in Cottage 5 (the larger of the two) was performed by the Engineer Mr Gourlay and his staff. The building of the chimneys and bricking in of the boilers and making coal vaults in each Cottage was done by the mason Mr. Watson. In this way and by using the old reconstructed steam boilers no longer required in the boiler house, the outlay of this department for this most important work was greatly lessened.

Too much praise cannot well be bestowed upon the Architect for the thorough manner in which he has secured the repairs and improvements to the intake pipe.

**[[SUNDAY SERVICES.**

A much larger number of the patients have been able to attend services on Sundays during the past spring and summer than formerly on account of the accommodation afforded by the new chapel, and the institution is indebted to Rev. Mr. Tremayne Rev. Mr. Hamilton and Rev. Mr. Caldwell for their continued faithfulness in conducting these services. Rev. Father Cherier has also been assiduous in his attention to those of the Roman Catholic faith.

**OFFICERS AND EMPLOYEES.**

There have been no changes in the staff of Officers during the past year and very few changes among the employees. All the members of the staff understand the responsibility belonging to their respective posts and I have only words of commendation for the manner in which they perform their duties: they live in peace and amity with each other and in unsurpassed loyalty to their chief. On their behalf and on my own I desire to thank you for your consideration and counsel in the many perplexities which we have encountered during the past year.

I have the honor to be, Sir,  
Your obedient servant,

N. H. BEEMER.

## ANNUAL STATISTICAL REPORT

Of the operations of the Asylum for Insane, Mimico, for the year ending  
30th September, 1898.

TABLE NO. 1.

Shewing movements of patients in the Asylum for the official year ending  
30th September, 1898.

	Male.	Female.	Total.	Male	Female.	Total.

ANNUAL REPORT OF THE MEDICAL SUPERINTENDENT OF THE  
ASYLUM FOR INSANE, BROCKVILLE, FOR THE YEAR ENDING  
SEPTEMBER 30TH, 1898.

*Robert Christie, Esq., Inspector of Asylums, Ontario.*

SIR.—In compliance with the statutory requirements, I herewith submit the fourth annual report of this Asylum, for the year ending September 30th, 1898.

	Male.	Female.	Total.
Patients in residence October 1st, 1897 . . . . .	257	194	441
“ admitted during the year . . . . .	40	101	141
Total number under treatment . . . . .	297	295	592
Discharged :			
Recovered . . . . .	16	19	35
Improved . . . . .	3	5	8
Unimproved . . . . .	3	2	5
Total discharged . . . . .	22	26	48
Died . . . . .	20	10	30
Eloped . . . . .	1		1
Remaining in residence September 30th, 1898 . . . . .	254	259	513
Average daily population . . . . .	259	229	488

ADMISSIONS.

There were 141 patients admitted during the year. Of this number, thirty-nine were transfers from the other provincial asylums, while sixty-two were admitted by medical certificates direct from their homes, and forty by warrant from the gaols. It is gratifying to observe that the number coming to us through the gaol process is diminishing yearly. This means of commitment is usually the result of either of two causes, viz., ignorance of the necessary steps to be taken in order to secure the admission of a patient to an asylum, or hesitancy on the part of relations towards making application until violence on the part of the subject necessitates final and hurried measures. This reluctance, while of course natural, is to be deprecated as after the appearance of insanity the sooner a diseased mind is subjected to hospital treatment the better; and the most expeditious means of accomplishing this is to apply to the superintendent of the district asylum for the necessary papers.

As usual a number of old people, many having passed beyond the allotted span and who are merely suffering from the natural decadence of age, have been forced upon us. This I fear is an evil which can scarcely be overcome until the erection of district “homes for the aged” will enable us to refuse admission to all but those who are eligible.

## DISCHARGES.

The total number of discharges was forty-eight, of these thirty-five had recovered, eight had improved and five were unimproved. A large proportion of the transfers having been of the chronic class the percentage (twenty-five) of recoveries on the whole number admitted is no criterion. The percentage of recoveries on direct admissions was thirty four.

## DEATHS.

There were thirty deaths during the year, representing a percentage of five on the total under treatment.

## EMPLOYMENT.

As will be seen by the appended tables, large numbers of patients have been encouraged to engage in occupation of some kind or other. Idleness in an Asylum as elsewhere is simply a synonym for mischief and if permitted gives opportunity for the abnormal mental conditions to feed and grow and for new erratic impulses to develop, while the physical identity suffers concurrently. Out door exercise works inversely, the attention to and interest in the work crowding out morbid ideas, and the body recuperates under the invigorating influence of the pure air and sunlight. Of course while all in a fit condition to work are encouraged to be actively employed, the material results of patient labor are held in only secondary consideration, and it is continually impressed upon attendants in charge of working parties that the work exists solely for the benefit of the patients, not vice versa. This fact combined with the enervated physical condition of so many of our people renders the result of their work disproportionate to that of a like number of sane men, yet when the limitation and the physical disability are considered the amount of work accomplished on the grounds and elsewhere during the last year is surprising.

## GENERAL IMPROVEMENTS.

Since my last report, considerable progress has been made towards converting the eight acres of wood in front of the Asylum into a park, and though we found it in a very rough state with enormous boulders disputing the right of territory with the trees, it could be seen from the first that its possibilities were magnificent, and each month finds us progressing towards their realization though necessarily at a rather slow pace as our grounds are extensive, and their very picturesqueness renders work upon them more laborious than if a flat monotonous condition existed. The boulders in the park were pressed into service and form a permanent substratum for the main drive, and the soil excavated from the roadbed was utilized in levelling the park. We hope to complete the main drive this Autumn, and then we shall be in a position to pay attention to the laying out of the walks, flower beds and other details.

A number of ornamental and shade trees have been planted on the lawns, and on the borders of the drive parallel with the buildings.

Increased accommodation for 20 patients has been secured by the removal of the partitions over the dining rooms of two of the cottages, thus transforming the limited small rooms into two large dormitories, well lighted, ventilated and heated and more sanitary and pleasant than the individual rooms. The work was done by patients under the direction of the carpenter.

The Public Works Department have just completed a root house and a much needed addition to the carpenter shop. The carpenter work of the latter and the painting and glazing of both were done by institution labor under the direction of the carpenter, and the excavation for the two buildings was done by the patients.

The interior walls throughout the executive building and two of the cottages have been painted and decorated by a couple of attendants assisted by patients. While only the ordinary painting materials were used the result is decidedly satisfactory, and the work has been commended as equal to that done by professional decorators. This improvement in the walls of the cottages is a welcome one to the attendants, as a laudable rivalry exists as to the substantial and ornamental nature of their respective wards, and co operation with them on these lines is appreciated.

The Engineer Department besides attending to the numerous alterations and repairs throughout the institution did the fitting for the steam heating in the carpenter shop, and hot water heating in the new dormitories.

The installation of a telephone system connecting all the cottages with the office and thus effecting direct and speedy inter-communication is a great advantage. The work was done by the Bell Telephone Co., and gives thorough satisfaction.

Besides assisting in the laundry and kitchen and accomplishing a large amount of sewing and mending, the female patients have under the direction of the nurses made a great deal of fancy work which goes far towards beautifying the wards.

#### CHAPEL AND RECREATION ROOM.

The want of a chapel and recreation room was specified in my report of 1896, and with the increase of population the necessity becomes more emphatic. Devotional exercises and amusements should form an integral part of the lives of all well regulated people, and as our aim is to redirect the mental and physical forces into the normal channel whence illness diverted them, we urge the attendance of patients at church and games whenever possible. The compound disadvantage of size and position possessed by our chapel and amusement room (it is 25 x 35 ft. and situated over the boilers) forced us to abandon religious services for the summer, as we concluded that this was a lesser evil than the crowding of patients into so small and hot a space.

When the indoor games and entertainments are resumed for the winter, we shall be obliged to send the patients in relays, and even when crowding is thus avoided, the temperature which holds high revel will make the attendance a questionable privilege. When the facilities for the erection of a combined church and amusement hall are taken into consideration, it seems all the greater pity that our equipment in this respect is practically nil. The walls of the present coal vaults would constitute a splendid foundation for a building which would be completed for about \$4,000.

#### ENCLOSURE.

I can only reiterate what I said on this subject in my report of 1897, time but emphasizing the necessity which existed then for a fence around the Asylum grounds. The patchwork affair that disfigures the precincts serves only to keep out wandering bovines, and to furnish visitors with material for good natured raillery on the subject of economy. So far as being of use in preventing the exit or ingress of human wanderers the present structure might just as well be cleared away.

I feel it almost superfluous to mention the fact that around a hospital of this nature there should be placed an enclosure, both to aid in the safe keeping of our patients, and to maintain a check on outsiders, a large proportion of whom are wandering Willies or members of gipsy bands who, once the warm weather sets in, infest the Prescott road. A picket fence six feet high would secure privacy to our inmates and enable us pretty effectually to exclude any undesirable element. I would suggest that the entrance gates at the south and west be of iron as the appearance and durability of wooden gates are soon sacrificed to continual opening and shutting, and to the effects of the weather.

## A GREENHOUSE.

This still remains on the list of wants and I would urge that an appropriation for even a small greenhouse be granted. Under existing circumstances we do not possess means of housing during winter even the few plants that are purchased from year to year.

## RECOMMENDATIONS.

I would again urge the desirability of supplying the patients with at least a small number of books. In respect of a library we are not even up to the standard of prisons which have the felons amply supplied with good reading matter. Surely when these places have their libraries, an institution with mental science for its watchword, should not be lacking in this respect after four years of existence. True, we are indebted to our local editors for newspapers, but the general matter that must necessarily be furnished in a daily paper is not always healthful food for melancholy, depressed or excited minds; consequently numbers of the patients are deprived of one of the chief pleasures of their lives.

A sidewalk from our gates to the town limits, 350 yards away, would be a great boon to the employees, the friends of patients, and the patients themselves, whose promenades would thereby be greatly extended. As the distance is comparatively short and as the work of construction could be accomplished by Asylum labor, the cost would not be large, and I would recommend that a small appropriation be made for the necessary lumber.

In the cottages which contain sixty patients three attendants are in charge, a number quite inadequate for the proper supervision of so many. As an attendant must accompany each walking or working party, it frequently happens that a large number are left to the care of one attendant, who in addition has to perform the work incidental to the meals, keeping the cottage in order, etc., etc. If an additional attendant were permitted for each cottage, the average number of patients to each would be fifteen, a number quite sufficient to tax the ability and energy of any one man, when the peculiar and responsible nature of the charge is considered.

Another pressing want is light for the grounds at night. When the moon does not favor us, we grope about in a state of Cimmerian darkness, and as a consequence those who, like the bats, prefer to roam under these conditions, make the asylum precincts their *rendezvous*, and the feeling of insecurity of those connected with the asylum increases in proportion with the frequency of the midnight prowlers' visits. The electric light company would supply sufficient lights for the proper illumination of the grounds at a moderate cost, and with the consequent opportunity afforded us of having the place patrolled, we would be in a position to indulge in more exclusiveness.

Our female patients have enjoyed many a pleasant hour through the medium of two pianos in their halls. The soothing effect of music on the disturbed mind is proverbial and those amongst our women who are musicians enjoy themselves and at the same time give pleasure to their afflicted audience. Visitors, too, often perform for the benefit of those in the wards, and it is touching to witness the half abashed, half defiant way in which, perhaps, a noisy patient issues from her room, and sits quietly in a corner enjoying the concord of sweet sounds and with the look of care banished from her face for the time. And there are others who, when the rollicking airs are struck, gradually brighten up and execute a *pas seul* for the diversion of their co-inmates. The good effects of this diversion, exhilarating to some and soothing to others, is undoubted. I am almost ashamed to say that the pianos have been rented and are paid for by the nurses, and I would urge that they be relieved of an expenditure from which the patients derive more benefit than themselves.

Ornamental and fruit trees should be planted without delay. Every year of delay in this respect is so much time to be regretted in the future.

It would appear from the many wants and recommendations enumerated that the appetite of this institution is insatiable, but while I have to thank you for multiplied wants supplied during the past years, I would remind you that, owing to the demand for accommodation at the time, our hospital suffered what I might call a premature birth, and many of the essentials that combine towards forming a perfect whole were left for later consideration, but as the patients of to-day are of just as much importance as those who will follow in the future, I feel that my list of requests contains nothing but what I am justified in asking for. Even these, if granted without exception, would only find us well equipped from a custodial standpoint. We are doing, and shall do the best we can for our charges, realizing that each mind committed to our care is an additional responsibility to that list, for which one day we shall be expected to give satisfactory reckoning, but our opportunities as I said, with even this list of wants and recommendations supplied, must be limited greatly to custodial and hygienic means. I have not yet asked for any pathological equipment—not that it by any means is of secondary importance, but it, I suppose, must wait till the specified essentials are supplied. In the meantime we cannot help envying those of our confreres further afield, who have every opportunity of scientific research and experiment afforded them, and I believe that the time will come when the pathological will be considered as essential an adjunct of a hospital for insane as the culinary department. I have rather anticipated myself, however, and trust that a year or two will find me in a position to lay before you my wants relative to the subject.

#### THE FARM.

The crop was very good with the exception of the potatoes, which, in consequence of the drought were almost a complete failure. The yield of our farm must necessarily be limited owing to the rough and rocky nature of a great portion of it.

The milk from our own cows was sufficient for the requirements of the institution

#### THE GARDEN.

The yield of the garden was satisfactory, and the gardener may congratulate himself that the supply of vegetables will be almost sufficient for the year. The absence of fresh fruit upon which to regale the patients is to be regretted, but the currant and berry bushes planted last year are doing well and will, we hope, begin to bear next year. Besides cultivating vegetables, Mr. Richards has put in a great deal of work on the ornamental grounds, the result being quite apparent.

#### AMUSEMENTS.

The usual games and amusements were indulged in during the winter, and provided a decided means of diverting the patients.

Several of the town choirs and secular organizations furnished us with concerts, and greatly delighted appreciative audiences.

The band of the 41st Battalion gave two open air concerts which were much appreciated.

A large number of patients attended the Walter Main's circus and it is safe to say that they added their quota of applause for the performers.

#### ACKNOWLEDGEMENTS.

The ministrations of the clergymen of the various denominations has been a means of great spiritual comfort and solace to our afflicted family, in whose name we thank them.

---

We are indebted to the editors of the Recorder and Times respectively for exchanges, and for weekly editions of the local papers.

Mr. Patterson, our neighbor, won the thanks of the patients for a treat of apples from his fine orchard.

#### THE STAFF.

The medical staff is still limited to one assistant physician besides myself, and the inadequacy which made itself felt when mentioned in a former report, increases proportionately with the population.

The appointment of Mr. W. P. Dailey to succeed Mr. J. W. Baker as bursar is the only change which took place in the official staff.

The changes amongst the attendants and employees have been few. The existing staff of employees, a number of whom have worked in the interests of the asylum since its organization continue to exhibit their wonted interest, which augers well for another year's satisfactory progress.

Your obedient servant,

J. B. MURPHY,

Medical Superintendent

# ANNUAL STATISTICAL REPORT.

Of the operations of the Asylum for Insane, Brockville for the year ending  
30th September, 1898.

Carried forward

Carried forward

ANNUAL REPORT OF THE ASYLUM FOR IDIOTS, ORILLIA, FOR THE  
YEAR ENDING SEPTEMBER 30th, 1898.

To JAMES NOXON, ESQ.

*Inspector of Asylums, Toronto, Ontario :*

SIR,—I beg to submit the twenty-second annual report of the operations of this asylum, being for the year ending September 30th, 1898.

There were in residence on October 1, 1897, 344 Males, 286 females, total 630. There were admitted during the year by Lieutenant Governor's warrant, three males and one female, and by medical certificate 27 males and 34 females, total 65, which added to the number in residence made 695. Of this number there were discharged during the year six males and four females, seven of whom were much improved. 18 males and 26 females died, leaving in residence 359 males and 291 females, total 641.

It has been my privilege and duty to submit each of those twenty-two annual reports, and many and great have been the changes since the first. From the old building on the shore of Couchiching, to the magnificent pile overlooking Simcoe is a long step; from the 130 inmates of our first year to the 641 of to day is a large increase; from the old and almost helpless demented and idiots gathered from the insane asylums to the hundreds of young boys and girls with happy countenances and mirthful laughter is a great change. During those twenty-two years there have been no less than six ministers in charge of this institution, and four inspectors. We have had four bursars, and four matrons; while the changes in the staff generally have been many; and yet the work goes on, and the institution has not only justified the wisdom of the Government and Legislature that gave it existence, but has won for itself a prominent position among the large and important institutions of the province.

#### APPLICATIONS.

There are no less than 220 applications for admission on file as against 139 last year. This is a large increase and calls for some action on the part of the Government to extend our accommodation. It is but fair to say, however, that many of those applications are unsuitable for this institution. As a rule, when some of those are refused admission to an asylum for the insane, the applicants are referred to this asylum as a more suitable place for them. Some of these are either subject to a mild form of insanity or suitable subjects for a poor-house. Again there are many epileptics who certainly should not be admitted here, and who are more insane than idiotic; but while this is true, there still remains a large number for whom provision should be made. And while recognizing the fact that the largest expenditure from the public revenue goes for the maintenance of our public institutions, and that there must be a limit to this form of expenditure, the knowledge that the Government has assumed the full care and support of the insane and defective must also be recognized. In my opinion it is only a question of time when it will be found necessary to require the counties to assume a portion of this expenditure. It would not only be a relief to the Government, but it would be a positive good to the municipalities in causing them to take a greater interest in their unfortunates; and it would have the effect of increasing the number of industrial homes.

#### HOW TO PROVIDE ROOM.

The question of increased accommodation is a serious one, and will require careful consideration, and a few thoughts and suggestions may not be amiss here.

First, either the erection of new buildings here, or the acquisition of buildings already erected in some other locality, where 300 custodial cases could be cared for, would make ample provision for at least ten years. The State of New York had this problem to solve, and it was done by opening an institution for feeble-minded women at Newark, N. Y., where about 500 of this class are provided with a comfortable home, and are at the same time kept beyond the possibility of multiplying their kind. Heredity being the most fruitful source of idiocy, it follows that anything that can be done to curtail that source would be a long step towards the decrease of idiocy and imbecility. A custodial asylum has also been opened at Rome, N. Y., where there are now between four and five hundred cared for, and Ontario should follow the example of New York and at least establish a custodial asylum, which would afford relief to this institution and allow it to deal with the younger and more hopeful for which it was particularly designed.

Second, another plan well worth considering is to begin the establishing of a colony for epileptics. This plan has been urged in previous reports and reasons given for such a step. This would not only relieve our institution of about 140 epileptics, but it would relieve the asylums for the insane of some 400 more, thereby making provision for five or six hundred patients in various asylums. There is no question about the advantage and wisdom of colonizing epileptics. It is being done in many of the neighboring States and many European countries, notably in Germany and England, with most satisfactory results. Such a colony becomes self supporting, and if economy alone were considered the thing would pay.

Third, purchase more land and provide suitable buildings to accommodate forty or fifty of our working patients. Now that the clearing of land owned by the Government is near completion, it will be an absolute necessity to buy more if for no other reason than to provide work for our inmates. It would be a great mistake to keep so many here without supplying them with ample employment, more especially as a large number of them are able-bodied men and capable of doing a vast amount of work. It is hoped therefore that two or three hundred acres of land surrounding us may be purchased soon. It would be a paying investment from the start, and would have the additional recommendation of providing room for some of those whose applications are being constantly urged from time to time. If a house were erected for the medical superintendent, that portion of the building now occupied by him could be fitted up for the reception of paying patients. There are many who would willingly pay five dollars per week, or even more, if they could be provided with suitable rooms for their unfortunates, and where it would be possible to keep them from mingling with the general crowd of our inmates. Twenty such patients would mean one hundred dollars per week, and there is not the slightest doubt but that number would take advantage of such a provision; indeed many have already made application and visited the institution to see what kind of accommodation could be obtained, and while expressing themselves as well satisfied with the general appearance of the building and surroundings, yet desired a sharper classification, and expressed themselves as willing to pay handsomely. More room, therefore, could be obtained at a moderate outlay—First, by colonizing the weak minded women either here, which would be the preferable plan, or elsewhere. Second, erect a custodial asylum, or utilize the building at Penetanguishene or Cobourg for the old and useless inmates of both sexes, with a capacity for three or four hundred. Third, establish a colony for epileptics, which would not only relieve us of 140, but would also relieve the insane asylums of many more. Fourth, buy a sufficient area of land and make a farm colony, and build a house for the medical superintendent.

#### THE SCHOOLS.

Since my last report the Department has thought advisable to make some changes in the school by which the number of teachers has been reduced, and which have in view the making of better provision for the industrial instruction of the more capable inmates, that they may be trained to fill positions of greater usefulness in the industrial work of the institution. Those changes are now in course of formation and not yet being com-

pleted further reference to them is unnecessary. The work of the four teachers to which our staff is reduced has been and is satisfactory and those in school are making progress, but more attention requires to be given to industrial training and it is to be hoped the changes now being made will supply this need. About six years ago I made a special report on our system of training and the results that might be expected from it, and so pertinent is it to our present condition that I insert a portion of it here:—

“It is long since the training and education of idiots or imbeciles passed the experimental stage, and it has been proven beyond all manner of doubt that all imbecile children, except the paralytic, can be improved to a certain point, that a large majority can be so improved as to make them not only helpful to themselves, but to others; that a certain percentage, depending very largely on the plane from which they start, can be made self supporting. Speaking of some of those who occupied the higher plane, Dr. Brown, of Barre, Mass., says in one of his reports: “several of those who have been cared for and educated by me are now filling stations of usefulness and responsibility in life, having served in the army and navy during the war, are managing small farms or maintaining themselves by some mechanical trade.” Dr. Kerlin in one of his reports says: “Of five hundred individuals received and treated at this institution eighty-one are capable of earning their own support.” Dr. S. G. Howe, of Mass., many years ago wrote of one of those institutions: “It has given speech to some who were dumb, and who, if left without special aid would have remained dumb. It has greatly improved the condition of more than four-fifths of its pupils. They have been put into a higher state of health and vigor, they have been trained to the command of muscle and limb, they feed themselves, dress themselves, and conduct themselves with decorum.”

We have here two very remarkable instances of giving speech to the dumb. First, nearly three years ago we received a girl, twelve years of age, who did not articulate one word, and to-day she talks so fast and loud that she has almost become a nuisance. Second, a short time ago a boy, fourteen years of age, the son of one of Ontario's most distinguished educationists, was received here. He could not articulate a word except no; for yes he would say ugh. He is now after six or seven months beginning to talk. The other day an attendant brought him and another boy into my office to be disciplined for fighting, and to my question the boy answered he struck me; when the other boy gave the reason for striking him that he had thrown slippers at him. The boy instantly exclaimed no, one boot. Now, this boy had every advantage at home, had been sent to school, had been instructed by mother and father and yet could not speak, and here a few months after his admission he can make himself understood perfectly. The girl mentioned above can read and write and sew, and has made remarkable progress. Her father, who comes to see her twice a year, is perfectly amazed at the improvements made, and stated that he could do nothing with her at home. I may say that these two are the better grade of children and like a good many others here could be brought up to the self supporting point.

Dr. H. B. Wilbur, who did more in establishing these institutions in America than any other man, in his twentieth annual report of the institution at Syracuse thus wrote: “seven experimental schools, started under State patronage, have resulted in the establishment of as many public institutions, built and supported by these several States. In nearly every instance these experiment schools have been located at the State Capital, where their modes and operations and their results, could be conveniently scrutinized by the members of the legislative bodies, upon whose favour they were dependent. They are, therefore, now the exponents of the intelligent conviction of the respective legislatures that founded them.” The seven States referred to were Massachusetts, New York, Pennsylvania, Ohio, Illinois, Kentucky and Indiana, and since then eight other States have founded splendid institutions. If no benefit resulted from the instruction given in those institutions, the respective States would not maintain them. Massachusetts, Pennsylvania, New York and Ohio have institutions dating back in the fifties, and they are among the most popular in their respective States.

We have commenced our instruction on the same lines followed by those older ones, and we think with very gratifying results. Our system consists of physical as well as

mental training; indeed the physical with the majority of cases received here, should receive the greater prominence; and it is one of the essential qualifications of the successful teacher with this class that she should be a woman of remarkable patience and firmness, refined, ladylike, and well educated. The inmates are benefited by the instruction imparted, in their general appearance and demeanor, in making them more happy and cheerful, in making them helpful to themselves and kind to each other, in making some to walk who could not stand alone when they came here, in making some to talk who could not utter a word when admitted, in teaching many to read and write, so that they write letters home to their friends, in teaching the girls to sew and knit and other useful employments. In fact there is no limit to the benefits that flow from the instructions imparted to those poor creatures. Many of them, in fact, the great majority of our most hopeful cases, if allowed to grow up without training, as thousands have done before them, would become hopeless, drivelling idiots, instead of the bright, happy active boys and girls they are now, with a certainty of being useful men and women, useful to themselves and others and capable of engaging in useful and profitable employments.

The system of instruction, therefore, should embrace the physical as well as the mental, for neither art nor book, but life itself is the ground work of education and teaching. To produce improvement we must act on the whole being, body as well as mind, for idiocy is not simply a mental deficiency to be remedied by a course of instruction directed to the mental faculties, but is also a deficiency of nervous functional power, the result of nervous or brain diseases, largely depending on a feeble constitution. The aim should be to improve the bodily frame by exercises of some kind to be adapted to the individual cases in hand. This we try to do, and we think with very fair results."

"The methods of instruction vary with the varied capacities of the children, and much must depend on the varied capabilities of the individual teacher. According to an eminent authority "the ideal teacher is well educated, refined, intensely interested in her pupils, and has a professional zeal to grow in her work. She is original, striving to introduce new and bright methods, but not passing hastily from subject to subject before the child has grasped the first. She is patient but energetic, sweet tempered but persistent, and to the influences of her education she adds the charms of personal neatness and attractive manners. She possesses naturally, a well-grounded religious sense, which finds its best expression in self sacrifice, conscientious duty and instinctive kindness."

#### INDUSTRIAL TRAINING.

As already pointed out, all our efforts to educate or train the feeble-minded will be of little practical use unless they are taught to work so as to be useful to their friends or to the institution if it is found necessary to keep them here. In this country where the winters are so long that at least for half the year neither farm nor garden labor is practicable, it is clear that we should have shops of different kinds fully equipped, and with industrial teachers under whom the boys can learn some of the simpler trades, such as shoemaking, carpentering, mat weaving and brush and broom making. We have now four boys working with the tailor since last June, and one of them runs the sewing machine very well. The others make all the button holes and sew on the buttons as readily as expert workmen. This class should be increased to eight, and so with the other trades. Owing largely to the patience and care of our baker, three or four of the boys have been made very useful in the bakery. For the girls an intelligent, well-educated woman of a kind and gentle disposition should be appointed to take a class of ten or fifteen girls to learn dressmaking and sewing generally. One-half of each day should be spent in the workrooms, and the other half in the schoolrooms. There should be no let up on Saturday. Teachers and instructors in an institution for the feeble-minded have as much right to work six days in the week as the attendants and employees in all the other departments have to work seven. A holiday for our children is not appreciated by them, for they are better and happier in school, and so express themselves.

## MILITARY DRILL.

For the last year a company of the boys have been under a drill instructor (one of the attendants), and a very marked improvement is noticeable in their general bearing and physical appearance. They are becoming quite proficient in the various movements.

A class of girls is also instructed in physical culture and calisthenics, and their exercises will compare very favorably with those of the public and high schools. It is to be regretted that these exercises were not continued in connection with the school proper, for there can be no question as to their benefit to the class of children sent here.

## THE BAND.

About a year ago a band was organized under the instruction of one of our attendants, who had been a band master before coming here. The progress made has been very gratifying. It is made up of about an equal number of inmates and employees, and the intention is to have it composed exclusively of inmates as soon as a sufficient number can be trained to the use of the instruments. It is needless to say that this music is much enjoyed by our boys and girls, and it adds cheerfulness and life to the whole institution.

## THE GARDEN.

The products of the garden have been fairly satisfactory. They would have been much better, however, had it not been for the long spell of dry weather. You will see from the following table that the results have been up to the average.

Asparagus.....	200 bunches.
Beans, green.....	44 bushels.
Beets.....	400 "
Beets.....	60 bunches.
Cabbage.....	7,550 heads.
Cabbage, red.....	300 "
Cauliflower.....	400 "
Carrots.....	600 bushels.
Celery.....	1,500 heads.
Corn.....	975 dozen.
Cucumbers.....	60 "
Lettuce.....	280 "
Onions, green.....	196 bunches.
Onions, dried.....	100 bushels.
Parsnips.....	60 "
Peas.....	12 "
Parsley.....	200 bunches.
Peppers.....	12 dozen.
Radish.....	40 "
Rhubarb.....	4,040 bunches.
Spinach.....	50 bushels.
Squash and Marrow.....	20 dozen.
Tomatoes.....	130 bushels.
Turnips.....	150 "
Apples.....	5 "
Currants, red.....	301 quarts.
Currants, white.....	38 "
Currants, Black.....	487 "
Citron.....	4 dozen.
Grapes.....	58 pounds.
Gooseberries.....	362 quarts.
Musk Melon.....	16 dozen.
Raspberries.....	860 quarts.

Strawberries.....	399 quarts.
Mint.....	70 bunches.
Summer Savory.....	300 "
Sage.....	100 "
Thyme.....	400 "

## IMPROVEMENTS.

Some improvements have been made in connection with our heating plant, which now, I think, is nearly perfect both in respect to efficiency and economy.

The new cow stables have been completed, which gives us ample room for some time to come.

A verandah was added to the gardener's house, and in addition to these some finishing touches were given to the grounds and roads.

## WANTS.

The convenience and economy of having coal vaults in connection with our boiler house have been frequently referred to in my reports. The loss in the frequent handling of our coal and the time consumed might be saved if my suggestions were acted upon, and I would again respectfully urge that an appropriation be asked for this very desirable improvement.

The laundry has been taxed to its utmost capacity in keeping up with the work, and more machinery is required to meet the demands of our increased and ever increasing population. At present we have three washing machines, one of which is worn out and useless. There should be four good machines, and as we have only two that can be depended upon, two new ones should be procured. We should also have an ironing machine as well as a starcher. With these four machines our laundry would be no more than properly equipped for the large amount of work passing through it.

I call your attention again to the necessity of improving or changing our system of lighting. For the last two or three years it has been anything but satisfactory. The present plant is too small for so large an institution, and in the early part of the night, with the large number of burners in use, the power or pressure is so weak that the flame is sometimes little better than a candle. This should not be, and I would again recommend the installation of electric light, which in the end would be not only cheaper but much safer than gas.

During the summer months we have found our water supply almost too low. This is especially the case if there is an extended drought, and something should be done to increase the supply. Of course, we would have ample supply if the pumping plant were removed to the lake, but this will not be necessary for some time, as there are several springs that might be conveyed to the reservoir if we had a supply of piping. With the additional supply we could get in this way there would be no danger of failure for several years.

## ATTENDANTS AND EMPLOYEES.

A word of praise is due to our staff of attendants and employees generally. I often think we are exceedingly fortunate in being able to secure the services of such an efficient staff, of attendants especially. In point of intelligence and education they are much above the average found in similar institutions, so that their duties are performed not only faithfully, but intelligently as well.

I have the honor to be,

Your obedient servant,

A. H. BEATON,

Medical Superintendent.

# ANNUAL STATISTICAL REPORT

Of the operations of the Asylum for Idiots, Orillia, for the year ending 30th  
September, 1898.

TABLE No. 1.

Shewing movements of patients in the asylum for the official year ending 30th  
September, 1898.

	Male.	Female.	Total.	Male.	Female.	Total.
Remaining, October 1st, 1897.....				344	286	630
Admitted during year :—						
By Lieutenant-Governor's Warrant .....	3	1	4

# THIRTY-FIRST ANNUAL REPORT

UPON THE

## COMMON GAOLS, PRISONS AND REFORMATORIES.

Considerable improvement has been made in the gaols throughout the province during the past year, but much more remains to be done before they will be in a creditable state of repair and perfectly safe for the detention of criminals.

Quite a number of the county councils have, during the year, put in furnaces for heating the gaols, new cells, electric light, town water supply, etc. But there are still a number of counties, some of them the most wealthy in the province that seem determined to do nothing in this direction. Their sole consideration appears to be to have a place where they can imprison their aged destitute people and keep them at the lowest possible cost to the municipalities.

It is gratifying to know that during the year a number of comfortable and well equipped county homes have been erected for the care of the poor, and that other counties are now moving along the same lines. The very liberal grant of money which the Legislature offers for this purpose should induce the others to provide such institutions for their aged pauper class, and discontinue the practice of committing them to the gaols under the Vagrancy Act. I trust that the coming year will show a still greater increase in the number of these homes throughout the province and especially in the eastern section.

The gaols and lock-ups in the districts of Algoma, Nipissing, Parry Sound and Muskoka have been kept in good repair, and much improved by introducing proper heating, lighting and drainage. The gaol at Parry Sound requires enlarging; the gaol yard at Mattawa should be extended; and the gaol and court house building at Rat Portage requires a new system of heating, all of which will have to be completed during the coming year.

There has been quite a large decline in the number of prisoners committed during the past year, viz., 628, the total being 8,256, as compared with 8,884 in

---

1897. The number of adult males committed was 559 less than last year; while the number of adult females showed a decrease of 100. Of boys under sixteen years of age there was an increase of 49; and of girls under sixteen years of age a decrease of 18.

The number committed for crimes against the person was considerably less than in any previous year for twenty-two years; while the committals for crimes against property the number was slightly more than in previous years with the exception of 1888.

The committals for crimes against public morals and public decency were less than they have been for the past five years.

For offences against public order and peace the decrease is about twenty-five per cent. as compared with previous years.

All other causes for which persons were detained as prisoners, including insane persons and dangerous to be at large, show a smaller number than in any other year since 1877.

The committals for drunkenness were less than for the past seven years, being 1,707.

The total number of prisoners in the gaols of the province at the end of the year was 644, an increase over the previous year of 34.

The total gaol expenditure of the province during the past year was about \$5,000 less than in 1897.

In the tables will be found details as to prisoners committed to gaols, the places where they resided, the gaols to which they were sent, their crimes, nationality, religion, cost of maintenance, etc.

In my notes of inspection of the gaols for the past year will be found details as to the condition of buildings, crimes for which prisoners were committed recommendations for improvements, etc.

## COMMON GAOLS.

The following table shews the number of prisoners committed to the Common Gaols in the Province in each year, from the 1st October, 1869, to the 30th September, 1898.

Date of commitment.	Men over 16 years of age.	Boys under 16 years of age.	Women over 16 years of age.	Girls under 16 years of age.	Total.

The disposition made of the persons committed to the gaols of the Province is set forth in the table printed below :

Acquitted on being brought to trial and discharged .....	1,479
Discharged without trial by order of judges, magistrates and courts including remand cases .....	699
Detained for want of securities to keep the peace .....	33
Detained as witnesses .....	14
Detained as fraudulent debtors .....	29
Detained as lunatics, idiots and persons unsafe to be at large .....	340
Died before trial .....	3
Detained by civil processes other than above .....	19
Waiting trial and otherwise detained on 30th September, 1897 .....	88
Found guilty and sentenced .....	5,311
Discharged under suspended sentence .....	241
<b>Total number of commitments .....</b>	<b>8,256</b>

The places of confinement to which the convicted persons were sentenced are set forth in the following statement, and similar information is given as regards the sentenced prisoners of the previous year :

	1897.	1898.
Sentenced to Kingston Penitentiary .....	176	148
do to the Reformatory for Boys .....	45	67
do direct to the Central Prison .....	522	540
do to the Common Gaols and subsequently transferred to the Central Prison .....	62	65
do direct to the Reformatory for Females .....	96	93
do to Common Gaols and subsequently transferred to the Reformatory for Females .....	18	20
do to the Common Gaols and there detained until the expiration of sentence .....	4,580	4,349
Died while undergoing sentence .....	41	29
<b>Total .....</b>	<b>5,540</b>	<b>5,311</b>

The summaries given below shew the nature of the offence committed by the convicted persons :

### 1. Crimes against the Person.

	Total commitments for the year.	Number found guilty and sentenced.
Assault, common .....	334	233

A summary is given below showing the days' stay respectively of those prisoners whose maintenance was chargeable to the Province and of those who were a charge on the municipalities:

	Days' stay.
2,904 Criminal prisoners remained in gaol.....	86,717
5,352 Municipal " " " .....	<u>158,418</u>
8,256 Prisoners in all " " .....	245,135

#### STATISTICAL TABLES.

Following this portion of the report will be found the tables named in the list given hereunder:

Table No. 2, showing the total number of prisoners in the several gaols on the 30th September, 1898, and the nature of their imprisonment.

Table No. 3, showing the number of prisoners over and under 16 years of age, the number of recommittals, the number of persons acquitted on being brought to trial and the number of persons committed under civil processes.

Table No. 4, showing the offences for which prisoners were *committed*.

Table No. 5, showing the number of prisoners, male and female, *committed* under each offence during the year.

Table No. 6, showing the number of prisoners, male and female, *sentenced* during the year, and a comparison of the same with the preceding year.

Table No. 7, showing the number of prisoners upon whom sentence was passed the nature and periods of the sentences, and the operation of the County Judges' Criminal Courts.

Table No. 8, showing the offences for which prisoners were *sentenced*.

Table No. 9, showing the total number of prisoners, male and female, *sentenced* under each offence.

Table No. 10, showing the nationalities, religious denominations, social state, etc of the prisoners committed.

Table No. 11, showing the occupations, trades, or callings of the prisoners committed during the year.

Table No. 12, showing the number of escapes and deaths, the revenue derived from prison labor, the cost of diet, accommodation of the gaols, and the highest and lowest number of prisoners in custody in each gaol during the year.

Table No. 13, showing how the prisoners committed during the year were maintained, the cost thereof, and the salaries of officials.

Table No. 14, showing the daily cost per prisoner in each of the gaols of the Province, for the year ending 30th September, 1898.

After these tables will be found the separate reports upon the gaols and lock-ups.

TABLE No. 2.

Shewing the total number of prisoners who were in the several gaols of the Province on the evening of 30th September, 1898, and the nature of their imprisonment.

Name of gaol.	Classification.				Nature of imprisonment.						Total number of persons who remained in custody 30th September, 1898.
	Men.	Women.	Boys under 16 years.	Girls under 16 years.	Waiting trial.	Under sentence for periods of 2 months and under.	Under sentence for periods over 2 months.	In default of sureties to keep the peace.	Insane, idiotic or imbecile persons.	Otherwise detained.

# REPORTS UPON COMMON GAOLS.

## BARRIE GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	244	227	201
Greatest number confined at any one time .	40	53	46
Number of re-committals . . . . .	62	62	51
Total cost of maintaining gaol . . . . .	\$4,887.68	\$5,695.48	\$5,749.45

Copies of reports made by me to the Government upon this gaol are annexed

I made an inspection of this gaol on the 22nd January, on which occasion there were thirty-eight prisoners in custody—thirty-seven males and one female.

Five were committed for larceny, one for counterfeiting, one for arson, four for assault, one on a *capias*, two as insane, and the remainder for vagrancy.

The general condition of the building was good, beds, bedding, corridors yards, etc., were in well kept order. Good drainage and ventilation. Town water supplied. Dietary according to regulations; supplies contracted for Twenty suits of clothing in good order. Books, properly kept.

I made a second inspection of this gaol on the 22nd October, and found thirty-two prisoners in custody—all males, committed as follows:

Rape, two; assault, one; larceny, two; procuring abortion, one; insane, one; and the others for vagrancy.

The premises were clean and in good order. The building is heated by hot water and electric lighted.

Plenty of clothing on hand, Books entered up.

## BERLIN GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	100	105	108
Greatest number confined at any one time .	15	16	18
Number of re-committals . . . . .	38	32	42
Total cost of maintaining gaol . . . . .	\$1,836.33	\$1,984.76	\$2,380.51

Copies of reports made to the Government by me upon this gaol are annexed

I made an inspection of this gaol on the 10th February. On that occasion there were thirteen prisoners in custody—all males—two of whom were committed for larceny, and the remainder for vagrancy.

The beds and bedding, cells and corridors, yards and water-closets, were clean and in good order. The books were well kept.

This gaol can be enlarged by adding another storey to the portion used for kitchen and bath room, using the upper part for lunatics and hospital, and taking

the room over the turnkey's apartments for bedroom for that officer: a stairway would be required from the hall in the turnkey's apartments up to the second flat. This should be done.

I instructed Mr. Aikins to make the second inspection of this gaol. A copy of his report is annexed:

The second inspection of Berlin gaol was made by Mr. Aikins on July 25th. Four male prisoners and one female were in the building. Of the total gaol population up to date one-half were vagrants, thus turning what was intended to be a penal institution into a house of refuge, and the same is true, perhaps to a less extent, all over the Province. Why the decrease in crime should mean an increase in pauperism is difficult to see, unless it be that law being more vigilant, overtakes its victim before he has had time to gravitate from laziness and aimlessness to positive crime. Tramps shun the gaols where the county provides work, and this makes an unfair comparison of one gaol with another, unless the several counties interested be taken into comparison.

I made a minute examination into the gaol appliances, which I found very satisfactory; the only change being the addition of a neat book case, which the gaoler told me was the nucleus of a gaol library. This is an idea, quite inexpensive, and might be adopted with profit by similar institutions in the Province.

#### BELLEVILLE GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	180	150	159
Greatest number confined at any one time . . . . .	23	24	26
Number of re-committals . . . . .	17	15	16
Total cost of maintaining gaol . . . . .	\$2,255.20	\$2,270.60	\$2,199.00

Copies of reports made to the Government by me upon this gaol are annexed:

I made an inspection of the Belleville Gaol on the 1st February. There were then seventeen prisoners—all males, committed as follows:—Seven for vagrancy, five for larceny one for smuggling, one for indecent assault, one for want of sureties to keep the peace and two insane.

The beds and bedding, cells and corridors, yards and water-closets were clean and in good order. Good drainage and ventilation. Town water supply.

The dietary is as required by the regulations and the supplies are contracted for. There are thirteen suits of clothing in good order. Books properly kept.

It is very necessary that water-closets should be placed in the gaol corridors for the prisoners' use.

Another inspection of this gaol was made by me on the 22nd December. There were then nineteen prisoners in custody, eighteen men and one woman. committed as follows:—Of the men, four for assault, seven for larceny, one for extradition, one for indecent assault, one for drunkenness, and four for vagrancy: the woman was insane.

The building generally was in very good order. There were thirteen suits of clothing in good order.

As previously recommended the placing of water-closets in the corridors is a much needed improvement and I hope the County Council will soon have the change made. It is very desirable also that electric light be put in the building.

## BRANTFORD GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	250	234	198
Greatest number confined at any one time . .	24	22	22
Number of re-committals . . . . .	113	122	100
Total cost of maintaining gaol . . . . .	\$2,631.03	\$1,670.82	\$2,907.03

Copies of reports made to the Government by me upon this gaol are annexed :

I made an inspection of this gaol on the 6th June. Ten male prisoners were in custody—five for larceny, two for drunkenness, one for fraud, one for vagrancy, and one insane.

I found the premises in satisfactory condition, and the corridors, cells, bedding, etc., in well kept order.

The sheds in the gaol yard require a new roof : and the brick wall enclosing the yard requires repairs. Twenty-five suits of clothing in good order.

My second inspection of this gaol for the current year was made on the 22nd November. There were nine prisoners in custody—eight males and one female. Of the former, three were committed for larceny, two for vagrancy, one for drunkenness, and one as insane. The female was held on a charge of larceny.

The general condition of the building was very good. There were twenty-four suits of clothing in good order. The books were correctly kept.

## BRAMPTON GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	288	126	63
Greatest number confined at any one time . .	23	25	18
Number of re-committals . . . . .	83	27	20
Total cost of maintaining gaol . . . . .	\$2,084.48	\$1,773.97	\$1,772.34

A copy of my reports upon this gaol is annexed :

This gaol was inspected by me on the 28th of January. There were then fifteen prisoners in charge, namely, eleven men and four women. The men were charged as follows :—Eight for vagrancy, one for assault, one for obtaining goods under false pretences, and one for want of sureties to keep the peace. The women—two for vagrancy, one for prostitution, and one insane.

I found the premises in good order, and the beds, bedding, etc., clean and tidy. The regulation dietary is carried out, and the supplies are contracted for in part. There were fifteen suits of clothing in good order. Books properly kept.

I instructed Mr. Aikins to make an inspection of this gaol, a copy of his report is annexed :

I made the second inspection of this gaol on September 23rd, when I made a thorough tour of the building and grounds. The interior had been kalsomined throughout and presented a clean and fresh appearance, although the presence of stoves in the corridors is both unsafe and unsightly. One stove especially was cracked and liable to fall in pieces, and I advised the gaoler to have the attention of the Council called to it. The cells were fairly orderly and clean and the yards in good condition.

Ten prisoners were in the building, six males, three females, and a babe. Half of this number were vagrants and the others committed for crime. The prison population this year is less than half the year before, being only fifty-five up to the date of my inspection as compared to 127 in 1897.

I examined carefully the several books and records in use. These were written up to date and gave all the information necessary.

## BROCKVILLE GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	145	160	153
Greatest number confined at any one time . . . . .	20	20	16
Number of re-committals . . . . .	64	82	81
Total cost of maintaining gaol . . . . .	\$2,364.15	\$2,123.15	\$2,330.25

Copies of the reports, made by me to the Government are annexed :

I inspected this gaol on the 25th March, when there were four male prisoners in custody, namely, one committed for arson, one a witness in same case, one for wounding policeman, and one for vagrancy.

The building is being entirely remodelled, and an addition made for a residence for the gaoler.

I made another inspection of this gaol on the 30th November. There were then fourteen prisoners in custody—twelve males and two females, for the following offences:—Males—manslaughter, two ; assault, one ; fraud, one ; larceny, two ; vagrancy, two ; drunkenness, two ; gambling, one ; idiocy, one. Females—assault, one ; drunkenness, one.

Since my last inspection the locks have been fixed, and the bars in the iron cells have been properly refitted and made secure.

Mr. Dana, the newly appointed Sheriff, has entered upon the duties of his office and now has oversight of the management of the gaol.

## BRACEBRIDGE GAOL.

	1896.	1887.	1898.
Prisoners committed during the year . . . . .	84	60	56
Greatest number confined at any one time . . . . .	16	14	11
Number of re-committals . . . . .	9	3	6
Total cost of maintaining gaol . . . . .	\$2,013.76	\$1,660.28	\$1,749.24

A copy of the report upon this gaol, made by me to the Government is annexed :

I inspected the Bracebridge gaol on the 25th January, when there were seven prisoners in custody—six males and one female, who were charged as follows :—Males—murder, one ; forgery, one ; larceny, one ; vagrancy, one ; idiocy, one. Female—murder, one.

The gaol was found to be clean and in good condition. Good drainage and ventilation. Town water supplied. Dietary according to regulations—supplies purchased as required. Fourteen suits of clothing on hand in good order. Books properly kept.

There were four male prisoners in custody when I inspected this jail on the 22nd October. One committed for debt, one for breach of inland revenue, and two for vagrancy. One of the latter is insane—he is a young man twenty-five years of age.

The supply of clothing was deficient in shirts and boots. All departments were clean and in good order, and the books properly kept.

CAYUGA GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	106	120	89
Greatest number confined at any one time.....	24	22	21
Number of re-committals.....	58	70	60
Total cost of maintaining gaol.....	\$1,903.13	\$1,790.20	\$1,877.12

Copies of my reports to the Government upon this gaol are annexed :

I made an inspection of the Cayuga gaol on the 31st March.

There were then thirteen males and two females in custody. Nine of the males were committed for vagrancy, one for abusive language, one for cattle stealing, one for larceny, and one for drunkenness. One of the females was a vagrant and the other was waiting trial for murder.

The prisoners are employed in breaking stone.

The gaol was in very good order, and the beds, bedding, etc. clean. Good drainage and ventilation. Water supply from a well. Food supplies mostly bought by contract, and served according to regulations.

Eighteen suits of clothing in good order. Books well kept.

I instructed Mr. Aikins to make the second inspection of this gaol. A copy of his report is annexed :

I made the second inspection of Cayuga gaol on July 26th. Only two prisoners were in charge, a vagrant and a demented old man. Committals for crime have been about the same as for a number of years, but there have been less vagrants.

Structurally the building was in a very fair condition. It was also clean and free from any offensiveness. It was late in the evening when I made my visit to the gaol and the gaoler was absent. I made a note of some changes which I considered desirable, especially in recording the daily movements of the prison population, in their diet, etc., and requested the turnkey to communicate the same to the officers interested.

CORNWALL GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	73	82	110
Greatest number confined at any one time.....	10	19	19
Number of re-committals.....	18	30	26
Total cost of maintaining gaol.....	\$1,695.13	\$2,177.85.	\$1,975.39

Copies of reports made by me to the Government upon this gaol are annexed :

My first inspection of this gaol for the current year was made on the 24th April. There were thirteen prisoners in custody, ten males and three females, for the following offences: Males—wounding, one: threatening, one: larceny, two; assault, one: insane, one: trespassing on railway, four. Females—infanticide, one: vagrancy, one: larceny, one.

The general condition of the building was good; the beds, bedding, cells, corridors, water-closets and yards were in well kept order.

Good drainage and ventilation.

Town water supplied.

Some more clothing is required.

I made an inspection of this gaol on the 24th September. Sixteen prisoners were in custody on that date, namely, fourteen males and two females, committed as follows: Males—larceny, one: rape, one; drunk and disorderly, two; insane, one; vagrancy, nine. Females—bigamy, one: infanticide, one.

The corridors and cells were in well kept order. Dietary according to regulations. More clothing required. Books properly kept.

#### COBOURG GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	212	162	151
Greatest number confined at any one time.....	48	44	50
Number of re-committals.....	78	81	89
Total cost of maintaining gaol.....	\$6,355.84	\$6,653.56.	\$5,653.78

A copy of my report made to the Government on this gaol is annexed :

I made an inspection of this gaol on the 31st January. There were then forty-three prisoners in custody, thirty-six males and seven females, of the former, two were committed for larceny, one for rape, one for drunkenness, one for perjury and one for assault: the remainder were vagrants. The females were vagrants with the exception of one, a prostitute.

The cells, corridors, beds and bedding, yards and water-closets were clean. Drainage is good; ventilation not very good. Water supply from well. The regulation dietary is observed, and supplies are contracted for. Thirteen suits of clothing on hand in good order. Books well kept. Discipline and management good.

I instructed Mr. Nicholson to make a second inspection of this gaol. A copy of his report is annexed:

I visited the gaol on the 7th September, and found it clean and in good order generally.

There were thirty-five inmates, namely, twenty-six men and nine women. Of the former, one was certified insane, one was waiting trial for attempted rape, two were undergoing short sentences for vagrancy, and three for drunkenness. One of the women was under sentence for prostitution. All the others (nineteen men and eight women) were of the indigent class which should be cared for in a

county poor-house. Their being domiciled in the gaol must make the duties of the gaol officials somewhat onerous.

There were 141 prisoners committed during the year. The records were entered up to date. The gaol surgeon's book shewed frequent entries.

#### CHATHAM GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	164	183	173
Greatest number confined at any one time.....	15	20	17
Number of re-committals.....	11	11	10
Total cost of maintaining gaol.....	\$2,314.80	\$2,564.14	\$2,259.68

Copies of my reports to the Government are annexed :

I made an inspection of the Chatham gaol on the 8th March. The prisoners then in custody numbered eight ; seven men and one woman. The woman was committed for larceny, and the others as follows : Horsestealing, one ; assault three ; indecent assault, one : larceny, one ; seduction, one.

This gaol is not in good condition. The beds and bedding, cells and corridors, yards and water-closets were clean. The drainage and ventilation are not good. City water supplied. Food according to regulations, supplied by contract in part. Twenty suits of clothing in good order. Books properly kept.

#### GODERICH GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	81	75	44
Greatest number confined at one time.....	32	32	18
Number of re-committals.....	36	22	15
Total cost of maintaining gaol.....	\$2,268.20	\$2,447.77	\$2,485.44

Copies of my reports made to the Government upon this gaol are annexed

I made an inspection of the Goderich gaol on the 15th April, when there were six male prisoners in custody ; four committed for vagrancy and two for housebreaking.

The beds, bedding, cells, corridors, etc., were clean and in good order. Good drainage and ventilation. Water supply from town system. Food supplies contracted for and furnished as regulations require. Twelve suits of clothing in good order. Books properly kept.

I instructed Mr. Aikens to make a second inspection of this gaol. A copy of his report is annexed.

This gaol has been much improved of late years, but it is unfortunate that the good work was not carried a little further. The plumbing and inside closets will remove the sanitary objections hitherto existing, but as only cold water is carried through the pipes, hot water for bathing purposes will still have to be carried by hand. The extra cost of putting in hot water pipes would have been small if done when the present plumbing was in progress. There should also

have been a separate bath room and tub for the gaoler's use. The practice of forcing the gaoler to occupy two or three of the corridors and use the prisoner's bath room is decidedly objectionable. Yet on account of his own apartments being still damp and unsanitary this is what he has to do. The gaol will be incomplete so long as this continues.

After inspecting the plumbing, etc., I looked over the yards and found them much improved since the removal of the old rotten closets. I also examined the register and dietary and other books, and found that the officials paid daily attention to this part of their duties.

GUELPH GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	80	105	90
Greatest number confined at any one time.	15	10	15
Number of re-committals.....	2	11	30
Total cost of maintaining gaol.....	\$2,634.48	\$2,753.95	\$2,680.63

A copy of my report made to the Government upon this gaol is annexed :

I inspected the Guelph gaol on the 10th February. There were six prisoners in custody on that day—five men and one woman. Of these four were charged with larceny, one drunkenness, and one vagrancy.

I found the premises in good order and cleanly kept. The water-closets are in the yards. The drainage and ventilation are good. Food according to regular tions: supplied partly by contract. Twelve suits of clothing are in good order.

Books properly kept.

I instructed Mr. Aikins to make a second inspection of this gaol. A copy of his report is annexed.

I inspected the Guelph gaol, the second time, for the year on July 23rd. It then contained five prisoners, including one female vagrant. Of the males, one was waiting to be taken to the penitentiary as a pickpocket, another was a wife beater, having already tried his hand on two wives, and while speaking to him I learned that he intends to get a divorce from wife No. 2 and get one that will submit more patiently to his wife-beating propensities.

I looked over the books in the office which were all in a satisfactory condition, and made a tour of the building. Some kalsomining and slight needed repairs have been made, and with the assistance of the prisoners, the authorities keep the building clean and free from offensive and unhealthful smells, which so commonly attach to even a small number of prisoners.

HAMILTON GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	549	457	466
Greatest number confined at any one time.	44	36	43
Number of re-committals.....	262	354	244
Total cost of maintaining gaol.....	\$4,730.09	\$6,331.27	\$4,678.57

Copies of my report to the Government upon this gaol are annexed :

My first inspection of this gaol for the current year was made on the 7th April, when there were thirty-five prisoners in custody, namely, twenty-nine men and six women. Of the men, seven were committed for larceny, sixteen for vagrancy, one for aggravated assault, one for escaping from constable, one for assaulting police, one insane, one for receiving stolen goods, one for unlawfully entering premises.

Of the women, two were committed for larceny, one for vagrancy, one for keeping house of ill-fame, and two were insane.

The prisoners are employed in cutting wood and breaking stone.

Plastering and general repairs were being done. The general condition of the building was very good: the beds, bedding, corridors and cells, yards and water-closets were clean and in good order. There is good drainage and ventilation. City water is supplied. Dietary in accordance with regulations: supplies mostly obtained by contract. There were thirty-five suits of clothing in good order. Books properly kept.

I inspected the gaol again on the 10th December. On that date there were twenty-eight prisoners (twenty males and eight females) in custody, committed as follows: Males—drunkenness one, disorderly conduct one, assault four, larceny two, fraud one, horse-stealing one, drunk and disorderly one, vagrancy nine. Females—larceny one, robbery one, vagrancy three, insane three.

The gaol was in good order throughout. There were thirty suits of clothing in good order. Books entered up to date.

#### KINGSTON GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	119	117	127
Greatest number confined at any one time . . . . .	21	26	24
Number of re-committals . . . . .	4	8	7
Total cost of maintaining gaol . . . . .	\$3,970.00	\$3,047.00	\$3,352.89

Copies of my reports upon this gaol are annexed :

I made an inspection of the Kingston gaol on the 21st April and found six prisoners in custody—five males and one female, committed as follows: Males—forgery one, malicious injury to animals one, vagrancy two, one larceny. The female was a vagrant.

The premises were in their usual state of good order.

The drainage and ventilation are good. City water supplied. Dietary according to regulations, supplies bought by contract. Eighteen suits of clothing in good order. Books properly kept.

There were thirteen male prisoners in custody when I inspected this gaol on the 15th December. One was committed for larceny, and the others for vagrancy and drunkenness.

The beds, bedding, cells, corridors, and water-closets were clean and in good order. The drainage and ventilation are defective. The dietary is as prescribed, and the supplies are obtained by contract.

There were twenty-four suits of clothing in good order. Books properly kept. Management good.

## LONDON GAOL.

	1896.	1897.	1898.
Prisoners committed during the year....	552	488	497
Greatest number confined at any one time	47	8	45
Number of re-committals.....	200	238	235
Total cost of maintaining gaol.....	\$5,761.84	\$6,737.51	\$6,631.22

Copies of my reports made to the Government upon this gaol are annexed

I inspected the London goal on the 4th of April, on which occasion there were thirty-two prisoners—twenty-three males and nine females. Of the males, five were committed for larceny, one for rape, one charged with insanity, fifteen for vagrancy, and one for murder. Of the females, five were vagrants, one insane, one committed for contempt of court, one for larceny, and one for being drunk and disorderly.

I found the beds, bedding, cells and corridors in well kept order. The water closets require renewing; they are very dirty and hard to keep clean, and a more improved style of closet should be substituted. There is good drainage; the ventilation not very good. City water supplied.

Food according to regulations, supplied partly by contract.

Thirty suits of clothing in good order. Books well kept.

A short time ago a prisoner escaped by climbing up the water-pipe and scaling the walls. The water-pipe should be removed immediately, as in its present position, it affords an easy means for prisoners to escape.

I inspected this gaol a second time on the 25th November, and found thirty prisoners in custody—twenty-seven males and three females. Males—six for larceny, eight for drunkenness, one for giving liquor to Indians, one for murder, one for carrying unlawful weapons, one for perjury, one for abusive language, three for housebreaking, two for vagrancy, three insane. Females—One for vagrancy, one for drunkenness, one insane.

The beds and bedding, cells and corridors, yards, etc., were clean and in good order. The general condition of the building is not good.

## LINDSAY GAOL.

	1896.	1897.	1898.
Prisoners committed during the year....	108	69	63
Greatest number confined at any one time	17	14	13
Number of re-committals.....	7	5	4
Total cost of maintaining gaol.....	\$1,706.18	\$1,760.59	\$1,775.65

I made an inspection of the Lindsay gaol on the 9th February.

The gaol premises were clean and in good order generally. The water-closets are in the gaol yard. The fixtures are in the corridors of the gaol and ready for connecting, so that water-closets may be put into each of the corridors. This should be done immediately.

Town and well water are in use. The food supplies are served according to regulation, and obtained by contract. There were twelve suits of clothing in good order. Books properly kept.

I instructed Mr. Nicholson to make an inspection of this gaol. A copy of his report is annexed:—

I made an inspection of this gaol on the 9th September. There were five prisoners in custody, all males. One was insane, and the others were undergoing short sentences for minor offences.

New water-closets have been placed in the corridors during the past season, and a new bath tub has also been added. The gaol and premises were found to be in satisfactory order.

#### L'ORIGINAL GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	39	33	10
Greatest number confined at any one time . . . . .	13	12	8
Number of re-committals . . . . .	2	3	1
Total cost of maintaining gaol . . . . .	\$1,575.76	\$1,621.13	\$1,373.31

At my inspection of this gaol, on the 24th April, there were four male prisoners in custody—all vagrants. They are the same men I found in the gaol at my last inspection. They are employed in cutting wood and breaking stone.

The premises were in good order, and the cells, bedding, etc., clean and tidy. The water supply is from a well. The food supplies are partly contracted for and served according to dietary regulations. There were four suits of clothing in good order. Books properly kept.

This gaol was inspected by me on the 24th September. There were four prisoners in custody—three males and one female—all of whom were committed for vagrants.

The corridors, cells, etc., were clean and in good order. Plenty of clothing on hand. Books well kept.

#### MILTON GAOL.

	1896.	1897.	1897.
Prisoners committed during the year . . . . .	312	325	237
Greatest number confined at any one time . . . . .	15	19	19
Number of re-committals . . . . .	33	36	24
Total cost of maintaining gaol . . . . .	\$1,170.63	\$1,213.68	\$1,360.57

Copies of my reports to the Government upon this gaol are annexed:

I inspected the Milton gaol on the 27th January. There were then nine prisoners in custody—all males. One was committed for larceny and the others for vagrancy.

The general condition of the building was good. The beds and bedding, cells and corridors, yards and water-closets were clean and orderly. Dietary as prescribed by regulations: Supplies partly obtained by contract. Twelve suits of clothing in good order. Books properly kept. Electric light has lately been put in the building. Prisoners are employed in breaking stone.

I instructed Mr. Aikens to make an inspection of this gaol. A copy of his report is annexed:

I made the second inspection of this gaol on October 3rd. Three old vagrants and one man, said to be insane, were all the prisoners in custody on that day. For one cause or another there have been nearly 100 less committals in 1898 than in 1897, Tramps especially have not been so numerous.

The building had been kalsomined during the past season and the floors oiled, all of which gave a fresh and clean appearance to the halls and corridors.

In the yards were the usual pile of stones that the town supplies and which the prisoners break up during the winter. The outbuildings I looked into and noted that they were equally as satisfactory as the main building; and the same remarks might be applied to the gaoler's books.

#### NAPANEE GAOL.

	1896.	1897.	1898.
Prisoners committed during the year .....	51	48	66
Greatest number confined at any one time.....	11	11	13
Number of re-committals .....	19	13	15
Total cost of maintaining gaol .....	\$1,501.02	\$1,748.68	\$1,884.96

Copies of my reports made to the Government upon the gaol are annexed:

This gaol was inspected by me on the 31st January, on which occasion there were seven male prisoners—no females. One was committed for selling liquor unlawfully, one for larceny, four for vagrancy and one was an idiot.

I found the building in good order. The beds and bedding, cells and corridors, yards and water-closets were well kept.

Food according to regulations and supplies obtained partly by contract. Well water supplied. Drainage and ventilation very good.

Four suits of clothing in good order. Books properly kept.

I found that the water-closets are on pits in the ground, near the well. They must be removed to some other place and dry-earth closets be substituted. It is important that connection be made between the water system and the bath tub in the gaoler's house as soon as possible, and a hot water tank should be attached to the cook stove.

The prisoners are employed in breaking stone and cutting wood.

I visited this gaol again on the 21st December. Eight prisoners were under charge, viz., seven men and one woman. The woman was held for prostitution, and the men—two for burglary, four for vagrancy and one an idiot.

The general condition of the building was very good. Beds and bedding, cells and corridors, yards and water-closets in well kept order.

The drainage is to be connected with the town system. The water-closets are still in the yards. Eight suits of clothing in good order.

I met the county property committee and went over the gaol and gaoler's and turnkey's residences with them. I pointed out where the water-closets should be placed in each of these quarters; also a bath tub in the gaoler's residence. The expenditure will not be very great in making these improvements and connecting the drains with the town sewer. Another very desirable change would be the heating of the court house with hot water or steam furnace. I would strongly urge upon the county council that this work be done as early as possible. It can be done as economically during the winter as at any other time.

#### OTTAWA GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	534	564	542
Greatest number confined at any one time....	44	55	54
Number of re-committals .....	41	67	71
Total cost of maintaining gaol.....	\$4,549.92	\$5,014.00	\$5,084.83

Copies of my reports to the Government upon the gaol, are annexed :

I made an inspection of the Ottawa gaol on the 23rd March. There were then in custody twenty-nine male and eight female prisoners, committed as follows: Males, one for perjury, one for keeping an illicit still, one for arson, eleven for larceny, ten for being drunk and disorderly, and four for lunacy. Females, four for keeping a disorderly house, and the others for lunacy.

The gaol was in good order throughout. Good drainage and ventilation. City water supplied. Food according to regulations, mostly supplied by contract. Thirty suits of clothing, in good order. The prisoners are employed in breaking stone and cutting wood. White-washing, spring cleaning and general improvement going on. The books are properly kept.

I inspected the gaol again on the 3rd December. Twenty-seven prisoners were in custody on that day, viz., eighteen males and nine females. Of the former, seven were committed for larceny, one for vagrancy, or idiocy, one for attempted rape, one for contempt of court, six for being drunk and disorderly, and two insane.

Two of the females were committed for larceny, one for selling liquor unlawfully, two for disorderly conduct, and four insane.

The general condition of the premises, beds, bedding, cells, corridors, etc., was satisfactory.

Thirty suits of clothing on hand in good order. Books well kept.

## OWEN SOUND GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	165	184	184
Greatest number confined at any one time. . .	54	69	69
Number of re-committals.....	88	80	96
Total cost of maintaining gaol.....	\$4,859.48	\$4,045.56	\$4,763.70

Copies of my reports to the Government upon this gaol, are annexed :

I made an inspection of this gaol on the 1st August. There were fourteen prisoners in custody, viz., eleven males and three females, charged with the following offences: Males, indecent assault, 1; aggravated assault, 1; drunkenness, 2; destroying property, 1; insane, 2; vagrancy, 4. Females, larceny, 1; vagrancy, 1; insane, 1.

The beds and bedding, corridors and cells, yards and water closets were in satisfactory order. Good drainage and ventilation. Town water supplied. Food according to regulations. Supplies mostly bought by contract. Thirty suits of clothing, in good order. Books properly kept.

A safe or other secure place should be provided for the gaoler in which to keep the keys of the gaol and other appliances. Electric light has been put in since my last inspection.

I requested Mr. Christie to make the second inspection of this gaol, and he reported as follows:—

In compliance with your request, I made an inspection of the Owen Sound gaol on the 17th October, and found sixteen prisoners in custody—twelve males and four females. Nine males and one female were vagrants, three males and one female were charged with theft, and two females were insane.

I found the books well and neatly kept, and the gaol itself vastly improved. Electric light has been substituted for coal oil lamps; painting and kalsomining have been thoroughly done and the whole institution presented a neat and well cared for condition. During the past year 184 prisoners were committed to the gaol, which is about a corresponding number with former years.

## ORANGEVILLE GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	72	133	114
Greatest number confined at any one time.....	24	28	21
Number of re-committals.....	16	27	22
Total cost of maintaining gaol.....	\$2,172.17	\$2,335.00	\$2,050.07

A copy of my report upon this gaol is annexed :

I made an inspection of the Orangeville gaol on the 23rd December. Sixteen prisoners were in custody, all of whom are old people committed for vagrancy.

The general condition of the building was good; and the beds, bedding, cells, corridors, etc., in well kept order. Good drainage and ventilation. Nine suits of clothing in good order. Books properly kept.

The water closets should be in the gaol corridors. A new furnace for heating is, I understand, about to be placed in the building.

## PERTH GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	75	79	120
Greatest number confined at any one time . .	21	30	32
Number of re-committals . . . . .	29	21	13
Total cost of maintaining gaol . . . . .	\$2,200.75	\$2,269.93	\$2,333.64

Copies of my reports upon this gaol are annexed;

I made an inspection of the Perth gaol on the 27th April. There were nineteen prisoners in custody, namely, fifteen males and four females, whose offences were as follows:—Males—vagrancy, nine; drunkenness, two; practicing medicine without qualification, one; larceny, one; insane, two. The females were all vagrants.

The beds, bedding, etc., as well as the building generally I found in good order. Well water supplied. There is no system of drainage. Food according to regulations. Five suits of clothing in good order. Books properly kept.

I made an inspection of this gaol on the 31st November. There were twenty-six prisoners, twenty-one males and five females, in custody. One of the former was committed for larceny, and one of the latter as insane; all the others were of the vagrant class.

The gaol was in good order throughout. There is no drainage, and the ventilation is poor. Some clothing is required. Books well kept.

## PICTON GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	36	49	58
Greatest number confined at any one time . .	4	6	9
Number of re-committals . . . . .	18	26	14
Total cost of maintaining gaol . . . . .	\$1,017.98	\$1,124.78	\$1,196.09

A copy of the report made by me to the Government upon this gaol is annexed:

I made an inspection of this gaol on the 8th June. General repairs were being done. The cells and corridors, yards, etc., were in good order. An ample supply of clothing on hand. Food supplies purchased by contract, and served according to dietary regulations. Books properly kept.

There were three prisoners in custody on this date—two men and one female.

## PEMBROKE GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	56	71	83
Greatest number confined at any one time . .	13	19	19
Number of re-committals . . . . .	24	27	25
Total cost of maintaining gaol . . . . .	\$1,529.75	\$1,881.97	\$1,664.00

Copies of the reports made by me to the Government upon this gaol are annexed:

I made an inspection of this gaol on the 22nd March, when there were ten prisoners in custody—eight males and two females. Males: one for larceny, one threatening to kill, one a debtor, one for bigamy, and four for vagrancy. The females were vagrants.

The beds and bedding, cells, corridors, etc., were clean and in good order. Steps are being taken to improve the drainage. Town water supplied. Food according to regulations, all supplies by contract. Ten suits of clothing in good order. Books well kept.

Water-closets require to be placed in the corridors and connected with the town sewerage. The Council are about to do this. Two bath-tubs and twelve iron bedsteads are also required.

A second inspection of the gaol was made by me on the 1st December. Seven prisoners were in custody—six males and one female. Of the former, two were committed for larceny, one for indecent assault, one for obtaining goods under false pretences, and three for vagrancy. The female also was a vagrant.

The general condition of the gaol was good. Since my last visit a new system of drainage has been laid from the gaol to the river, and a bath-tub wash-basins and water-closets of the latest improved pattern have been placed in the corridors of the building.

## PETERBOROUGH GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	174	166	186
Greatest number confined at any one time . .	22	21	24
Number of re-committals . . . . .	54	49	65
Total cost of maintaining gaol . . . . .	\$2,441.03	\$2,437.61	\$2,564.44

A copy of my report made to the Government upon this gaol is annexed:

I made an inspection of the Peterborough gaol on the 8th February, when there were eighteen male prisoners in custody, whose offences were as follows:—Larceny, two; horse stealing, one; cattle stealing, one; indecent assault, one; seduction, one, and the others were vagrants.

The general condition of the building was good; the corridors and cells, beds and bedding, yards and water closets were in well kept order.

There were thirty suits of clothing in good order. The prisoners cut wood and break stone. Painting and white-washing were being done.

The water-closets require fixing, and electric light should be placed in the building. The records were entered up.

I instructed Mr. Nicholson to make a second inspection of this gaol, a copy of his report is annexed :

I made an inspection of this gaol on the 8th September. There were then in custody sixteen male and two female prisoners, for the following offences :

Males, two for larceny ; one for procuring a girl for the purposes of prostitution ; eleven for vagrancy ; one for breaking gaol ; one insane.

Females, one for vagrancy : one for prostitution.

The commitments for the year were 172.

A new drain has been laid, connecting with a town sewer.

Wood stoves are used for heating, and coal oil lamps for lighting.

Electric bells should be placed in the quarters of the gaoler and turnkey connecting with the gaol, to be used by prisoners in case of sickness, etc.

#### PORT ARTHUR GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	36	45	38
Greatest number confined at any one time ..	12	13	10
Number of re-committals.....	3	8	..
Total cost of maintaining gaol.....	\$1,499.58	\$1,538.60	\$1,732.41

My annual inspection of the Port Arthur gaol was made on the 9th September. Seven prisoners were under charge—six males and one female.

They were held on the following charges :—Males, housbreaking, one ; larceny, one ; murder, four.

Females, disorderly conduct, one.

The building was in good condition with the exception of a leak in roof over the female ward, which I ordered to be repaired. I also ordered that stove pipes were to be renewed where they were burned out, and that a new mattress was to be got for the turnkey's bed. This will incur a total expenditure of about \$9.00

I made arrangements for the introduction of electric lights ; it costs about the same as coal oil and is much safer.

I found that the cesspools which receive the sewage required cleaning out, and ordered this to be done.

#### PARRY SOUND GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	24	29	58
Greatest number confined at any one time ..	8	8	10
Number of re-committals.....	1	4	9
Total cost of maintaining gaol.....	\$976.00	\$1,033.05	\$1,279.76

I made an inspection of this gaol on the 19th October and found four male prisoners in custody—two for sheep stealing, one for larceny, and one for illicit distilling. The doors, windows and fencing were in bad condition.

The building should be improved by building an addition on the front, with a second story, so as to provide eight or ten cells for males, and five cells for females. Water-closets should be placed in the corridors; and the gaol yard should be extended to the rear, and part of it partitioned off for the use of female prisoners.

The woodshed requires shingling; it will require about two and a half thousand shingles and cost about \$6.00.

#### RAT PORTAGE GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	83	155	188
Greatest number confined at any one time . . . . .	10	11	11
Number of re-committals . . . . .	15	57	19
Total cost of maintaining gaol . . . . .	\$2,523.97	\$2,537.13	\$2,966.05

This gaol was inspected by me on the 2nd September, when there were five prisoners in custody—two males and three females—for the following offences:—Males—Assault, one; larceny, one. Females—Assault, one, larceny, two.

The cells and corridors, officers' apartments, and court room were in well kept order.

I found the heating arrangement defective, and a new system will have to be put in another year.

Three or four more electric lights are required, and a new ice-house should be provided the coming winter, as the old one has entirely rotted away. The stove used in the kitchen is about burned out and will have to be replaced with a new one another year.

There is a good supply of clothing and blankets on hand.

#### SIMCOE GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	84	105	94
Greatest number confined at any one time . . . . .	11	12	14
Number of re-committals . . . . .	24	46	41
Total cost of maintaining gaol . . . . .	\$1,528.71	\$1,501.48	\$1,515.74

This gaol was inspected by me on the 31st of March. There were seven prisoners in custody on that day, viz.: five men and two women, whose offences were as follows:—

One, murder; two, larceny; one, fraud; and three, insane.

Neither of the parties reported to be insane can be so regarded. They are simply cases of senile dementia. The prisoners are employed in cutting wood.

The gaol was in a satisfactory condition. Drainage and ventilation very good. Well water used. Food supplied according to regulations, partly contracted for. Fourteen suits of clothing in good order. Books properly kept.

I instructed Mr Aikins to make a second inspection of this gaol, a copy of his report is annexed:—

I inspected this gaol on July 26th. Ten prisoners were in custody, eight males guilty of crimes, mostly of some magnitude, and two partly insane females. One of the latter is clearly a case more suitable for the County Poor House than for the gaol. She is the same individual for whom admission has been sought more than once to an asylum, on the principle that it is easier to shift the responsibility for the care of such to the Province than look after her in the municipality where she came from.

I made a thorough tour of the building inside and out, saw several prisoners, and examined the plumbing, means of ventilation, water supply, food, clothing, etc. These were all well up to the standard. The gaol books also were kept neatly and bespoke daily attention.

#### ST. CATHARINES GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	95	53	67
Greatest number confined at any one time . . . . .	25	10	17
Number of re-committals . . . . .	44	15	21
Total cost of maintaining gaol . . . . .	\$2,250.44	\$2,053.29	\$3,124.26

I made an inspection of this gaol on the 30th of March, and found nine male prisoners in custody, seven of whom were committed for larceny, one for assault, and one on a *capias*.

The prisoners are employed in sawing wood and doing general work about the premises.

The gaol was in a good state of cleanliness and order. Good ventilation, but no drainage. Water supply from city main. Food supplies are contracted for, and served according to regulations. Six suits of clothing in good order. Books well kept.

I instructed Mr. Nicholson to make a second inspection of the gaol, a copy of which is annexed:—

I made an inspection of this gaol on the 6th of August. There were in custody on that day nine males and two females. One of the males was waiting trial for shooting with intent, five were sentenced for six months for being drunk and disorderly, one for three months for trespass, and two for incendiarism.

One of the females was under sentence for six months for being drunk and disorderly, and the other was a case of senile dementia that should be cared for in the County Home.

I found the gaol in good order with the exception of one of the corridors for male prisoners where some of the plaster had fallen from the ceiling, and requires repairing. The books were properly entered up.

#### SARNIA GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	187	183	189
Greatest number confined at any one time . . . . .	33	18	18
Number of re-committals . . . . .	44	56	60
Total cost of maintaining gaol . . . . .	\$2 381.78	\$2,467.10	\$2,506.78

Copies of my reports to the Government upon this gaol are annexed:—

An inspection of the Sarnia gaol was made by me on the 9th April. There were eight prisoners in custody, all males, committed as follows: Four for vagrancy, two for drunkenness, and two insane. They were employed in cutting wood.

The general condition of the building was good. The beds, bedding, cells, corridors, waterclosets and yards were in proper order. Drainage and ventilation very good. Town water supplied. Food supplied as required by regulations. Twelve suits of clothing in good order. Books correctly kept.

I made a second inspection of the gaol on the 23rd November, when it contained sixteen prisoners, fifteen males and one female. The latter and ten of the former were vagrants. Of the others, two were insane, one committed for larceny, and one for drunkenness.

The beds, bedding, and premises generally were in a well kept condition of cleanliness and order. Twenty-four suits of clothing on hand in good order. Books properly kept.

#### STRATFORD GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	184	133	107
Greatest number confined at any one time.....	18	20	17
Number of re-committals.....	78	50	12
Total cost of maintaining gaol.....	\$2,652.96	\$2,331.64.	\$2,344.76

A copy of a report made by me upon this gaol to the Government is annexed:

This gaol was visited by me on the 11th February, when I found ten prisoners in custody: seven males and three females, who were charged as follows: Males—two for assault, two for carrying unlawful weapons and burglars tools, two for vagrancy and one for fraud. Females—one for keeping a house of ill-fame and two insane.

I found the gaol in good order throughout. Good drainage and ventilation. Town water supplied. Food according to regulations and supplied by contract. Ten suits of clothing in good order. Prisoners employed in cutting wood. Books well kept.

I instructed Mr. Aikins to make a second inspection of this gaol. A copy of his report is annexed.

I made the second inspection of Stratford gaol on Sept. 29th. The building both inside and out, was in good condition, neat, clean and orderly. The compact and simple character of the structure makes this condition of things possible, but apart from that, the gaol is well conducted throughout by the officials in charge.

Five male prisoners were in custody on the above date, three of them being of the vagrant class and the other two committed for crime.

I examined the various records in the gaoler's office and found them satisfactory in all respects.

## SANDWICH GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	183	179	144
Greatest number confined at any one time.....	22		20
Number of re-committals.....	23	33	23
Total cost of maintaining gaol.....	\$3,500.51	\$4,384.34	\$2,813.81

Copies of reports made to the Government by me upon this gaol are annexed:

I made an inspection of the Sandwich gaol on the 11th April, and found nine prisoners (seven males and two females) in custody. Five of the men were committed for larceny, one for drunkenness, and one for assault. One of the women was insane and the other a vagrant.

The premises were in good order. The drainage and ventilation are good. Town water supplied. Food supplies are bought by contract and served according to dietary regulations. Twenty suits of clothing on hand in good order. Books properly kept.

## ST. THOMAS GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	139	131	101
Greatest number confined at any one time.....	25	20	17
Number of re-committals.....	33	40	28
Total cost of maintaining gaol.....	\$2,050.91	\$2,041.81	\$2,078.03

Copies of the reports made upon this gaol by me to the Government are annexed:

This gaol was inspected by me on the 6th April. There were nine prisoners, all males, committed as follows: One for fraud, one for horse-stealing, one for using insulting language and six for larceny. They are employed in cutting wood.

The beds, bedding, cells, corridors, yards, etc., were clean and in good order. The water-closets are not in good condition and should be attended to as soon as possible. The drainage also is not good, there not being sufficient fall to carry off the water. There were twenty suits of clothing in good order. Books properly kept.

I inspected the gaol again on the 12th August. Six male prisoners were in custody on that day, two for burglary, one for vagrancy, two for larceny and one for contempt of court.

The beds, bedding, cells, corridors and yards were in well kept order. Drainage and ventilation good. The water-closets are in the corridors. City water supplied. Food according to regulations. Supplies partly obtained by contract and partly in the open market.

## SAULT STE. MARIE GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	82	71	49
Greatest number confined at any one time.....	13	11	13
Number of re-committals.....	6	3	2
Total cost of maintaining gaol.....	\$1,839.54	\$1,826.61	\$1,927.80

A copy of the report made to the Government by Mr. Mann upon this gaol is annexed:

On the 20th August, 1898, I inspected the Sault Ste. Marie gaol, according to your instructions. On the occasion of my visit there were seven prisoners in custody—five males and two females. The males were committed for the following offences, viz., larceny, 3; contempt of court, 1; vagrancy, 1 and the two females for being drunk and disorderly.

Some improvements are required in connection with the gaol, which may be enumerated as follows: First, a drain should be built from the terminus of the present drain to the river. The exact distance I did not ascertain, but it is not very far and the cost, the gaoler estimated, would be about \$75. This amount does not appear to be excessive, and the work should be done as soon as possible. There is also a new fence required in the front and rear of the gaol property, the old one being a disgrace to the place, as it is decayed and tumbling to ruin through lapse of time. By building a new fence in the front and rear, the fences on each side of the property could be repaired with the old material so as to last for some years. The expense in this connection probably would not exceed \$200. Gaoler was instructed to get an estimate and forward the same to the department.

The gaol was in good order and the books properly kept.

#### TORONTO GAOL.

	1896.	1897.	1898.
Prisoners committed during the year . . . . .	2,277	2,221	2,077
Greatest number confined at any one time . . . . .	207	189	193
Number of re-committals . . . . .	1,018	938	928
Total cost of maintaining gaol . . . . .	\$22,485.25	\$23,525.19	\$21,981.79

Copies of my reports to the Government upon this gaol, are annexed:

I inspected the Toronto gaol on the 12th October. There were then in custody 109 males and thirty-two females, making a total of 141 prisoners. Of this number thirteen males and seven females were committed as lunatics; eleven males and three females were waiting trial; thirty-three males were under sentence for indictable offences; forty males and twenty females were under sentence for minor offences; and twelve males and two females were vagrants.

The general condition of the building, beds, bedding, cells, corridors, water-closets, yards, &c., was very satisfactory.

The food supplies were of good quality, obtained by contract. An ample supply of clothing on hand.

A few heavy wire screens for the protection of the windows inside the corridors are required and should be supplied at once.

One of the adult males was violently insane, and should be removed to the asylum as soon as possible; also a boy who is idiotic should be taken to the Orillia asylum.

I would recommend that the vessels from which the prisoners eat their food should be porcelain lined instead of tin; they would last longer, be more easily cleaned and more sanitary. The books are properly kept, and the institution well managed.

I instructed Mr. Nicholson to make a second inspection of this gaol, a copy of his report is annexed:

According to instructions, I beg to report that I inspected the Toronto gaol on the 30th December.

The prisoners then in custody numbered 202—173 males and twenty-nine females, namely, lunatics, sixteen males, eight females; waiting trial, two males; on remand for indictable offences, fifteen males, two females; waiting removal to Central Prison, thirty-nine males; waiting removal to Boys' Reformatory, two males; old vagrants, twenty-four males, two females; under sentence, minor offence, seventy-five males, seventeen females.

Forty-one of the male prisoners were at work levelling ground in Riverside Park. The number of male lunatics awaiting removal to the asylum occasions some inconvenience by taking up room that is required for other prisoners.

The gaol was in very good order throughout. The wooden clothes dryer in the laundry is becoming dilapidated and unworkable, and should be replaced by a metal dryer.

#### WALKERTON GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	107	105	79
Greatest number confined at any one time ..	13	16	15
Number of re-committals.....	44	25	37
Total cost of maintaining gaol.....	\$3,127.74	\$2,192.73	\$1,918.33

Copies of reports made to the Government by me upon this gaol are annexed:

I inspected this gaol on the 16th April. Eight prisoners (six males and two females) were in custody on that day. Of the males four were vagrants, one insane, and one committed for larceny; one of the females was charged with refusing to pay a loan, and the other was a vagrant.

The gaol and its surroundings were in very good order, and the beds, bedding, etc., clean and well kept. The drainage and ventilation are good. Town water supplied. Twelve suits of clothing were in good order. Prisoners employed in breaking stone. Books properly kept.

I instructed Mr. Aikens to make the second inspection of this gaol; a copy of his report is annexed:

This gaol had fifteen prisoners in residence on the date of my inspection September 30th, thirteen of whom were males. Of these three were insane, four were vagrants and the others were committed for crimes.

I made a minute examination into the different parts of the building from furnace room to the top, also into the heating, ventilating and sewerage appliances, and, taken as a whole, this gaol is well up to the standard of county gaols in Ontario.

Outside the yards were neat and clean. I also looked closely over the books in the office. From the register I saw that many of the prisoners might better be accommodated in a poor house, which, by the way, is now nearly completed. The dietary, surgeon's book and other records on examination showed that the gaoler is neat and systematic in this part of his duties.

## WOODSTOCK GAOL.

	1896.	1897.	1898.
Prisoners committed during the year.....	232	184	169
Greatest number confined at any one time ..	27	26	20
Number of re-committals.....	87	83	84
Total cost of maintaining gaol.....	\$1,309.76	\$2,921.99	\$3,735.49

A copy of my report to the Government upon this gaol is annexed :

My first inspection of the Woodstock gaol was made on the 2nd April, when there were twelve prisoners in custody—eleven men and one woman. Of the men, five were committed for vagrancy, three for drunkenness, one for pointing a gun and one insane. The woman was committed for prostitution.

The general condition of the gaol was very good; the beds, bedding, cells, corridors, yards, etc., were in well kept order. The water-closets in the corridors were in good order.

There is good drainage and ventilation. Town water is supplied. The dietary is according to regulations; supplies are partly obtained by contract.

There were twelve suits of clothing in good order. The books were well kept.

On examining the walls around the gaol yard I found that the brick was bulging into the yard, and would strongly recommend that the county council cause to be built some brick abutments on the inside of the wall in such a manner as to prevent it from going any further or being damaged in event of a heavy wind storm.

A few suits of civilian clothing are required for persons committed under the vagrancy act, who are residents of the county.

I instructed Mr. Nicholson to make a second inspection of this gaol; a copy of his report is annexed :

I inspected this gaol on the 1st September. There were eleven male prisoners in custody—no females.

One was waiting trial on a charge of fraud, and three were said to be insane; the others were under sentence—one for larceny, one month: one threatening to shoot, two months: three for drunkenness, and two for vagrancy, undergoing short sentences. One of the "insane" is blind and deaf, and evidently should be cared for in the County House of Industry, as he is quite harmless.

The walls around the gaol yards have been straightened and repaired. The roofing of the wall-towers requires to be repaired as the wood-work is decaying. The pipes for ventilating the lower portions of the gaol appear to be too small for carrying off the foul air.

The premises were in good condition generally, and the books entered up.

## WELLAND GAOL.

	1896.	1887.	1898.
Prisoners committed during the year.....	376	259	176
Greatest number confined at any one time ..	55	55	43
Number of re-committals.....	120	90	57
Total cost of maintaining gaol.....	\$3,292.42	\$3,070.00	\$3,040.00

Copies of reports made to the Government by me upon this gaol are annexed:

An inspection of the Welland gaol was made by me on the 1st April. Twelve male prisoners were in custody on that day, ten of whom were vagrants, and two committed for larceny.

The gaol was in well kept order, and the beds, bedding, etc., clean.

Drainage and ventilation very good. Town water supplied.

Food served according to regulations, supplied partly by contract.

Forty suits of clothing were in good order. Books properly kept.

I instructed Mr. Nicholson to make a second inspection of this gaol; a copy of his report is annexed:

I made an inspection of this gaol on the 8th August. There were then four male prisoners in custody—no females. One was undergoing a short sentence for being drunk and disorderly, and the others for vagrancy.

Two prisoners were reported to have escaped from the gaol on the 3rd inst under the following circumstances:—The turnkey left them in the bath-room for a few minutes while he went for an article of clothing. The window in the room being unprotected, they climbed out on the coping and thence to the top of the wall where it was an easy matter to drop to the ground outside. They were followed at once, but only one has been recaptured so far. The bath-room window has since been secured by an iron grating.

The gaol was found to be in good order throughout, and the books well kept. Natural gas is now used in the gaol and county buildings for heating, etc.

#### WHITBY GAOL.

	1896	1897	1898
Prisoners committed during the year.....	55	60	54
Greatest number confined at any one time..	16	20	12
Number of re-committals .....	21	20	29
Total cost of maintaining gaol.....	\$2,014.85	\$2,100.82	\$2,127.86

Copies of my reports made to the Government upon this gaol are annexed:

I made an inspection of this gaol on the 12th February. There were in custody on that day nine men and one woman, for the following offences:—

One for indecent assault, one for larceny, one insane, and the others for vagrancy

The gaol premises were in good order—drainage and ventilation good—well water supplied. Food according to regulations supplied by contract. Ample supply of clothing on hand. Books properly kept.

Some of the locks and fastenings on the cell doors require fixing; also the wall in one of the corridors at the baseboard. The work was ordered to be done.

I made another inspection of the gaol on the 28th December, when its inmates were nine male prisoners—one charged with murder and one with house-breaking; the others, excepting one a lunatic, were vagrants.

The beds and bedding, corridors and cells, yards and water-closets, were clean and in good order. Eight suits of clothing in good order.

## MATTAWA GAOL

I visited this gaol on the 2nd November. There were no prisoners in custody at the time; nine were committed during the year.

The end of the gaol yard wall requires to be taken down and extended some twenty feet so as to enlarge the yard for the purpose of storing and cutting wood. And a door should be put in between the men's yard and the women's yard, enclosing sufficient ground for passage way so that wood can be taken into the cellar. The two pumps were not in order and I instructed the gaoler to have them fixed at once. Some repairs were required to the doors of the building.

## SUDBURY LOCK-UP.

I visited this lock-up on the 31st October. There were four male prisoners in custody, committed for larceny. The cells, yards and water-closets were well kept. The courtroom also was in good order. Some clothing is required for prisoners.

The gaol yard requires white-washing inside, and I instructed the gaoler to see that it was done. The building will require painting outside next spring.

Supplies are bought as required. Cost of prisoners per day  $7\frac{3}{4}$  cents. Books properly kept.

## NORTH BAY GAOL.

Three male prisoners were in custody when I visited this gaol on 3rd November—one for larceny, one for obtaining goods under false pretences, and one for bigamy.

I found three of the new cells considerably damaged as a result of the foundation not being substantial enough to carry the walls.

Scandinavian locks are required for the doors, and the sheriff was instructed to obtain them and have them put on immediately. New locks are also required for the doors opening from outside into the corridor, a prisoner having lately escaped from the gaol which is supposed to have been caused by some person who had been a prisoner and had been discharged, breaking the lock of the door between the hallway and the prison.

## GORE BAY LOCK-UP.

I instructed Mr. Mann to make an inspection of this lock-up. A copy of his report is annexed.

As requested by you I inspected this lock-up on the 19th August, 1898. There were no prisoners in custody at the time of my visit, although 16 had been serving terms during the year. The general state of this lock-up is fairly good. Some repairs are however required to the steps leading up to the building. The yard fence required to be painted as well as the doors, sashes, etc., of the building.

## LITTLE CURRENT LOCK-UP.

I instructed Mr. Mann to make an inspection of this lock-up. A copy of his report is annexed :

On the 19th August I visited the lock-up at Little Current as instructed by you. On this occasion there were no prisoners in custody, but during the past year there had been nine male prisoners in charge. This lock-up would appear to be all that is necessary for the requirements of the place. There are, however, a few improvements required, such as a well (at present water has to be carried a considerable distance) estimated cost of well would be about \$60. The drainage from this property is also defective, this could also be improved at a small expense.

## MANITOWANING LOCK-UP.

I instructed Mr. Mann to make an inspection of this lock-up, a copy of his report, dated August 19th, 1898, is annexed :—

On this date I inspected the above named lock-up and found very much the same state of affairs as has existed for some time (that is in previous years). There was one prisoner in custody (a man) for being drunk and disorderly, and during the year there had been imprisoned eight males altogether, most of them for the same offence. So far as the building is concerned it requires to be generally repaired, especially in the way of plastering and painting. This could be done at comparatively small expense.

The land upon which the building stands is Government property, well situated, but very rocky. A portion of the land might be advantageously used for any prospective public buildings, and I would advise that the ground upon which the building stands and the lots belonging to the Government be fenced with a good substantial fence so that this property may not be encroached upon as is at present by the proprietors of a neighboring saw-mill, logs and lumber being strewn promiscuously over the place mentioned.

## HUNTSVILLE LOCK-UP.

I inspected this lock-up on the 26th January and found it clean and in good order. No prisoners in custody on this date.

Plenty of clothing on hand. For supplies purchased as required.

Books properly kept.

I authorised the purchase of twenty cords of two foot hard wood at \$1.00 per cord, and eighteen cords of two foot wood at \$1.50 per cord, also some fixtures for windows. Tenders are to be called for for the erection of a fence.

This lock-up was empty of prisoners when I visited it on the 21st October. The buildings, fences, etc., were in a good state of repair.

## FORT WILLIAM LOCK-UP.

There were five prisoners (four males and one female) in custody when I inspected this lock-up on the 9th September. They were committed as follows:

One for drunkenness, one for disorderly conduct, and two for vagrancy; the female was a prostitute. During the year sixty-three prisoners had been committed, and two escaped. The daily number in custody was from seven to eleven.

I would recommend that an addition be made to the east end of the building, to be used as a kitchen for the gaoler. This should be done next season. The cost would be \$450 or \$500.

#### BURK'S FALLS LOCK-UP.

On visiting this lock-up on the 21st October I found one male prisoner in custody, committed for larceny.

The register showed quite a number of commitments during the year.

The building was in good order throughout.

Five electric lights have been arranged for, one in sitting-room, one in cellar, or in hall downstairs, one upstairs, and one in men's corridor. The price to be \$3.00 per light per year, all lamps to be kept in good order and renewals furnished by the company.

#### MASSEY LOCK-UP.

I visited this lock-up on the 4th November and found it clean and well cared for. Some of the locks on the cell doors are defective and will have to be repaired. I learned that the lock-up keeper has not received payment for wood which he has supplied to the lock-up for fuel since it was opened. This matter should have been attended to by the sheriff of the district of Algoma.

#### WERWOOD LOCK-UP.

I inspected this lock-up on the 29th October. There were no persons in custody. The building was in a clean condition. There was a good supply of wood for the winter, and plenty of bedding. An examination of the register showed that forty prisoners had been committed during the year.

#### STURGEON FALLS LOCK-UP.

This lock-up contained no prisoners when I visited it on the 1st November. The gaol plot contains an acre of ground which should be fenced in next season.

#### FORT FRANCIS LOCK-UP.

This lock-up was empty of prisoners when I inspected it on the 5th September. The building was in good condition with the exception of the cell locks which require shifting, and the doors require a little trimming. I ordered this work to be done.

A small working yard for the prisoners should be provided in which they could be employed at sawing wood, etc. It is desirable also that a small house be erected on the premises, as a residence for the keeper.

TWENTY-FIFTH ANNUAL REPORT  
OF THE  
INSPECTOR OF PRISONS AND PUBLIC CHARITIES  
UPON THE  
CENTRAL PRISON  
AND REFORMATORIES

OF THE  
PROVINCE OF ONTARIO,  
BEING FOR THE YEAR ENDING 30TH SEPTEMBER,

# CENTRAL PRISON.

---

## INTRODUCTION.

The committals during the year were 574, which with 391 in custody at commencement of year (1st October) and one recaptured, makes up the total number incarcerated during the year 965, as compared with 979 the previous year. The committals direct number 529, and to Common Gaols and transferred therefrom, 45. Never since 1880 have the committals been so few in number, being 289 less than in 1888, when the number 862 was the highest known. The average population for the year is 385, and average period of sentence eight months, fourteen days, as compared with 398 population and nine months period of sentence the previous year. In the first half of the last twenty-four years the average period of sentence was six months, eleven and one-quarter days, and in the last half, seven months, eleven and one-fifteenth days. In the last four years of the second period the average is eight months, seventeen and one-fifteenth days. Hence it will be seen there has been a gradual extending of the period of sentence all along the years, and coincident therewith, a growing average of population in proportion to the number of commitments. There has been a large falling off in the yearly average of vagrants committed since the erection of numerous houses of industry throughout the Province. The yearly average number of vagrants committed for the ten years ending 1894 is 113, and in the succeeding four the average is only forty-six and one-half. The falling off in this class of commitments largely accounts for the reduction in total commitments already referred to; and likewise for the increased average length of sentence, as vagrants are usually short term prisoners. The uneducated represent seventeen per cent. of the total number committed as compared with 14.35 per cent. in 1897. The intemperate constitute sixty-four per cent.; those reported temperate thirty-five and two-tenth per cent., and only three in number strictly temperate of the total commitments. Of the whole number, 348 were thirty years of age and under. The total stay of prisoners was 140,614 days, a reduction of 4,823 days as compared with 145,437 of the previous year. The gross per capita cost per diem for maintenance is (44 1-7) forty-four and one-seventh cents, against (39 1-10) thirty-nine and one-tenth cents in 1897, an increase of (5 1-20) five and one-twentieth cents. The total cost of maintenance outlay for the year is \$62,088.42 as against \$56,806.24 the preceeding year. This increase is explainable by the overlapping of some of the accounts from the previous year, and the increased cost of food supplies. The earnings of industries paid into the treasury amount to \$15,000, thus reducing the net cost of maintenance to 33.48 cents

per diem, the cost per annum to \$122.30, and the total cost for the year to \$47,088.52, as compared with twenty-two cents, \$80.69 and \$24,690.59 respectively for 1897. The unfavorable comparison as to net cost with the preceeding year is the result, in very large measure, of the two fires which occurred in the prison and which caused a serious interruption to the industries. There were gratuities paid out of industries to good conduct prisoners for the year, amounting to \$2,763.87, and out of maintenance \$445.56, as compared with \$2,281.78 and \$464.45 for 1897.

The following tabulated statements shows the results of the industries in operation at the prison for the year:—

RESULT OF YEAR'S INDUSTRIES FROM 1ST OCTOBER, 1897, TO 30TH SEPTEMBER, 1898.

DR.

To stock on hand beginning of year .....	\$67,984 73	
" amount for material and repairs .....	73,663 74	
" " fuel and general expenses .....	5,484 77	
" " salaries and wages.....	13,155 72	
" balance net gain .....	12,194 08	
		\$172,483 04

CR.

By sales.....	\$105,520 16	
" stock on hand and accounts receivable at close of year .....	66,962 88	
		\$172,483 04

The net earnings for the year were \$12,194.08, after paying \$2,763.87 gratuities to prisoners, \$687.86 insurance premiums, and providing for \$3,640 fire loss on lumber: the total earnings being \$19,287.81, notwithstanding the serious interruption to the broom-making while the shop was rebuilding, and the complete stoppage of the twine mill because of the prisoners who were operating it, being required for other work after the fire. In the work of reconstructing buildings and machinery damaged and destroyed by fire, it became necessary to take the prisoners out of the twine mill for this purpose, and before the work had been finally completed, a second fire broke out in the main building of the prison, making still further employment for them. In addition there were other works to construct for a more abundant water supply and better fire protection, so that the twine mill necessarily remained idle the entire year.

Statements of amounts chargeable to the various industries in carrying on the manufacturing operations of the Central Prison.

## A SUCCESSION OF FIRES.

The first fire to which allusion is made occurred 4th October 1897, which completely destroyed the broom shop and machinery, and partially destroyed the wine shop and machinery, as described in the report of last year.

It is extraordinary there should be four accidental fires in the Prison within twelve months. The first occurred in the month of August 1897, when a spark set fire to and partially destroyed the roof of the Warden's residence; the second happened in the month of October following, already referred to; the third in the month of April last, caught from a spark on the roof of the chapel, which is a portion of the main building, completely destroying the roof and ceiling; and the fourth originated from a spark which set fire to the roof of the north cell block and was put out before any damage was done. Here we have three fires from sparks falling on slate roofs in good order, and all wood work apparently well protected. On each occasion the fire broke out in the afternoon, while the prison was active, and with a strong wind blowing from the north-west. There were just two sources from which the sparks could come that set the fires, one from the brick chimney of the north shop, and the other from the smoke stack of passing locomotives. The brick chimney was at the time eighty feet high, and located fifty-five feet west and eighty-five feet south from the north end of the main building set on fire. Locomotives are almost constantly passing on a number of tracks parallel with the north end of the main building the nearest pair of rails, being eighty-four feet from it, and on a heavy grade.

The fires in the main building of August and April in the direction the wind was blowing, might have been caused from sparks from either source, but after the April fire the brick chimney was increased to 100 feet in height, and covered by a cage of copper wire with 3-16 mesh, when shortly after completion another fire occurred, having caught in the roof near the eave at the extreme north east corner of the main building. The location of this fire was on a line eighty-five feet north of the brick chimney, and with the direction of the wind at the time, a spark from it could not have lodged where the fire started. The conclusion therefore is that this fire to a certainty, and probably the other two also, were caused by sparks from passing locomotives. In view of this ascertained source of danger, which it is not possible to remove, it will be necessary to have all roofs of buildings carefully examined and the parts protected wherever there is a possibility of sparks gaining access to any part of the wood work.

## WATER SUPPLY AND FIRE PROTECTION.

The extent of the water supply provided by the construction of the water tank referred to by the Warden in his report, and its value as a protection against fire, will be better understood when it is stated that the water in the tank cannot be drawn upon by any connection made with it for ordinary prison purposes, to a lower level than will still leave not less than 300,000 gallons in store, which reserve can only be drawn upon by the fire pump in case of fire. It will therefore be seen there will at all times be 300,000 gallons of water in reserve for fire purposes—a quantity sufficient even though not replenished, to keep in play eight streams of water through one and a quarter inch nozzles for effective fire duty for five consecutive hours before being exhausted. The tank however, has a six inch connection with the city waterworks system as well as a connection with reservoirs in the brick yard, in the form of two wells of large capacity, with a special pump to deliver the water from them to the prison tank, so that these sources of supply being drawn upon, the water available is ample to meet the heaviest de-

mand that can be made for every possible duty. It may be further mentioned that the special provision made by the prison for fire protection, in no way interferes with the protection supplied by the city waterworks, except in case of a fire of more than four or five hours' duration when it might become necessary if the full number of eight streams were kept in continuous play to turn on the city waterworks connection to replenish the prison tank. To the efficiency of the appliances provided, the following report made by Chief Graham of the city Fire Department to the engineer of the Prison, bears ample testimony.

FIRE DEPARTMENT OFFICE.

TORONTO, Nov. 15th, 1898.

DEAR SIR,—I beg to forward you herewith a report of the test of the fire protection appliances at the Central Prison, on the 8th inst. as follows:

I found one Northey Pumping Engine, two steam cylinders 18 inches in diameter, two double action piston pumps 12 inches in diameter, capacity 1,000 gallons of water per minute. The engine is stationed in a very suitable house, a safe distance from the main building and workshops.

The first test made was through 200 ft. of  $2\frac{1}{2}$  inch fire hose with a  $1\frac{1}{2}$  inch nozzle; when a stream was thrown 175 feet horizontally. In this test the engine had to move very slowly on account of the small quantity of water discharged. Three streams were then turned on with  $1\frac{1}{2}$  inch nozzles when stream dropped back to 165 feet; this  $1\frac{1}{2}$  inch stream was taken as the governing stream for the other three streams.

On the second test, two lines of hose were siamesed into one branch pipe with a two-inch nozzle, when a two-inch stream was thrown 210 feet vertically up into the air.

The tests were made in the prison yard where no advantage could be taken of the wind, as the streams had to be thrown either across or against the wind.

During the test the engine was not run to its full capacity and I think the engine is quite capable of throwing 8  $1\frac{1}{4}$  inch streams over the highest buildings belonging to the prison.

I also wish to compliment you upon the very able and efficient manner in which you handled the engine during the test, which was also to the entire satisfaction of all the spectators present.

Yours truly,

(Signed) THOMAS GRAHAM,  
Chief Fire Department.

There is therefore every reason to believe the prison property is now thoroughly protected against fire, and that with an efficient organization to handle the appliances provided, a destructive fire at the prison may be regarded as next to an impossibility.

## DOMESTIC.

The management during the year has been satisfactory. Discipline has been well maintained and good order has prevailed in all departments. The sanitation of the prison and the health of prisoners have been good. The food supplied to prisoners has been wholesome and well served, while there has been a most gratifying freedom from complaints of any kind.

## RELIGIOUS AND EDUCATIONAL.

The continued zeal and devotion of clergy and teachers to the religious services, and to the Sunday school, and night school work, have had a marked influence for good upon, and have been of distinct benefit to prisoners. These must ever be regarded as the most powerful reformatory agencies of the prison.

The reports in connection with these services are herewith transmitted.

(Signed) JAMES NOXON,

Inspector.

## WARDEN'S REPORT.

TORONTO, Oct. 13th, 1898.

*Mr. James Noxon, Inspector of Prisons, etc., Toronto :*

SIR,—In submitting the annual report for the year ending Sept. 30th, 1898, we have to chronicle a series of disasters. On Oct. 4th, 1897, the broom shop was completely gutted by fire, leaving only the bare walls, all the machinery being destroyed. At the same time the roof of the twine mill was burned with considerable damage to the binder twine machinery. The twine mill and machinery were fully covered by insurance.

Adversity tests resources and the Central Prison was equal to the occasion. The roof of the twine mill was repaired at once, and the broom shop—basement and two flats—was rebuilt and ready for occupation the first week in February, 1898, a great part of the work being done by prison labor.

On the 4th of April, this year, fire broke out in the middle of the afternoon in the chapel roof, a location difficult of access by the firemen. The roof was burned completely off the chapel, the interior badly damaged and the Warden's apartments rendered quite unfit for occupation by fire and water. The chapel was at once repaired, but nothing has been done to the Warden's quarters, as they are urgently required for other purposes, in view of which it was deemed inexpedient to expend time or money on them.

During the past summer, considerable energy has been used in perfecting a modern and complete equipment for fire protection at this Institution. We have constructed a tank 110 feet long, 55 feet wide and 15 feet deep, capable of hold-

400,000 gallons of water. Quarter of a million of bricks were used in its construction, and the entire work of excavating and brick-laying was done by prison labor. We have an almost inexhaustible supply of water in two large wells on the premises, outside the prison walls, from which we pump to fill the tank. In addition to protecting the property, this will effect a saving to the Institution of \$1,500 per annum for water rates hitherto paid the City of Toronto. The saving thus effected will pay for the entire fire protection plant in about three years. An Underwriter's pump, built by the Northey Co., is installed, and at a recent and thorough test the most desirable results were obtained. Chief Graham of the Toronto Fire Department, whose report is appended, witnessed and directed the test, and pronounced it most complete in every respect.

While the average population is lower than last year, this does not indicate a diminution in commitments, as last winter many sentenced to the Central Prison were kept in the county gaols rather than permit the pernicious and demoralizing custom of putting two men in one cell.

The pressing needs for better hospital and school room facilities still exist. These were dealt with in detail in the Surgeon's and Teachers Reports of last year, and I am glad to learn that relief in this line is dawning.

I beg to recommend that the school teacher now engaged by the Prisoners' Aid Association and paid with monies received by the Association from the Government, be engaged by the Government as one of the prison staff. The present teacher, Mr. Finlay Spencer, is an efficient, conscientious and successful worker in his department, and if permitted to give all his energies to the work here he will accomplish considerably more than hitherto.

I desire to most gratefully acknowledge the self-sacrificing and ennobling work of Mr. Hamilton Cassells, Supt. of the prison Sabbath School and his loyal staff of teachers; also the services of Rev. Father Walsh who ministers to the Roman Catholic inmates with a zeal and fidelity which speaks for itself.

During the past year we have enjoyed the cordial co-operation and loyal support of the staff in the management of the Institution.

Enclosed please find the statistical report and the reports of the various departments of the Institution.

I have the honor to be, sir,

Your obedient servant,

J. T. GILMOUR,

Warden.

## ANNUAL STATEMENT OF EXPENDITURE.

On Maintenance Account at the Central Prison, Toronto, for year ending 30th September, 1898, compared with former years.

## SURGEON'S REPORT.

*James Nowon, Esq., Inspector of Prisons, Etc.,*

SIR,—In forwarding my report for the past year, it gives me much pleasure to state that the health of our inmates has been very satisfactory. With the exception of some mild cases of la grippe, there has been a complete absence of epidemic or contagious diseases among them. Care, in keeping the prison properly warmed and ventilated, in seeing that the food is of wholesome character, properly prepared and served, the clothing of the prisoners and themselves kept as clean as practicable, has had, I think, a share in producing the satisfactory condition at present existing. We have had but few accidents this year and they have been perfectly recovered from. There have been no deaths, and but few serious cases in hospital. I have examined, frequently, the bread, meat, etc., served to the prisoners and have to report them as good in kind and quality and well cooked and served. The change made by which each prisoner receives his own underclothing after being washed is a good one, and has given satisfaction, I make no remark upon the desirability of increased hospital accommodation having heard that changes are in contemplation, which may result in giving us better facilities in this respect: in the meantime, it is cause for thankfulness, that our hospital requirements have been but limited during the past year, less, I am informed, than for several years preceding.

I wish to acknowledge the kindness and assistance of the Warden in matters medical, to note the excellent work of my assistant Mr. Cochran, and his untiring efforts to be useful to those in need of attention, and the uniform courtesy of the official staff, in all matters in which I have been brought into contact with them. I subjoin the usual table of applications at the prison surgery.

Yours respectfully,

W. SLOAN,  
Prison Surgeon.

## CENTRAL PRISON NIGHT SCHOOL.

The work in the Night School has been carried on during the year with but one brief interruption, caused by the fire in the Prison last spring.

The average attendance during the year was 68.80. The highest average attendance for one month was 77.72, and the lowest was 60.57.

The more illiterate class of prisoners attending School continue to evince a desire to improve their time. So interesting and important has the Junior Department become, that some few months ago the demand for seating room was so taxed that, after consulting with the Warden, we decided to cancel the Fourth Class altogether, as some had acquired High School standing in some subjects. This change gave rise to a general reorganization of the School, and we find ourselves again crowded in some of the classes, particularly the Junior Arithmetic.

I would again call your attention to the unsuitable location and bad ventilation of the present school room. Fifty men in a room twenty by thirty feet, for two hours, with eighteen or twenty gas jets burning, cause the air to become so impure as to be offensive. I would urge that better accommodation be provided for this most important department of our work.

When visiting the New York State Reformatory at Elmira last May, I was impressed by the extensive preparations they were making there for secular education among the prisoners. Thirty large airy rooms, each with seating accommodation for fifty pupils, were being fitted up.

In closing I desire to thank Warden Gilmour and his staff for their kind co-operation in everything intended to promote the best interests of the men who wish to improve, not only their mental, but moral condition, while in prison.

FINLAY SPENCER,

Teacher.

## PRISONERS' AID ASSOCIATION.

## REPORT OF THE DIRECTORS.

With a single exception, the three Sunday Schools conducted by the Association (with a full staff of teachers every Sunday morning), have been carried on uninterruptedly during the year. A fire at the Central Prison last spring, caused considerable damage to the chapel, and the Sunday School for several weeks was suspended in consequence.

Members of the Toronto Ministerial Association continue to give their valuable services in conducting a preaching service every Sunday at the Central Prison and the Reformatory for women. These services are very highly appreciated by both the officers and the prisoners, and there is always keen disappointment when the clergyman appointed for the day fails to keep the appointment, which unfortunately sometimes occurs.

## WORK OF THE AGENT.

Mr. Finlay Spencer, the Agent of the Association, continues his work of aiding discharged prisoners and the families of prisoners, and he still conducts the Night School at the Central Prison four nights a week. The prayer-meeting organized by him in January, 1897, is now conducted by the teachers of the C. P. Sunday School.

## COTTAGE HOME FOR GIRLS.

The Cottage Home for Girls, established by Mrs. Bellamy, our Bible-woman, two years ago, has become an important factor in prosecuting our work among girls and young women. The aim of the Home is to rescue young girls who are simply on the border-line of vice or crime. Many of these girls are committed to our keeping from the Police Court, instead of being sent to jail. They do not usually remain with us more than two or three weeks, as there is no difficulty in obtaining good positions for those whom we can recommend. Our success in this line of work has been so marked that the supply of young female prisoners in the city jail has been practically cut off. The female prisoners in the city jail are now almost exclusively confined to what are known as "old timers."

## PRISON REFORM.

It is said that the only way to effect reform is to "agitate, agitate, agitate." For seven years we have been pressing for certain reforms that remain as yet to be brought about. From the Dominion Government we have been asking for the establishment of a reformatory for young men on the Elmira plan, and for the adoption of the indeterminate sentence and parole system. From the Ontario Government we have been asking for the re-organization of the Boys' Reformatory, Women's Reformatory and Refuge for Girls, and the establishment of a Reformatory for Inebriates. From the County Councils of the Province we have been asking for the adoption of the County Poorhouse system and for better classification and more reformatory treatment of jail prisoners, and from the Toronto City Council we have been asking for the adoption of the cellular or separate system for young first offenders and for making better provision for the destitute poor of the city, and separate provision for the treatment of inebriates. The necessity for these reforms is candidly conceded, but nevertheless the reforms are not inaugurated.

As an offset to this, however, it is but just that we should make grateful mention, firstly, of the Children's Aid Act and its inauguration by the Ontario Government; secondly, that a number of the counties in Ontario during the last four or five years, have established county poorhouses, and thirdly, that at the Toronto Jail a beginning has been made in the direction of keeping first offenders absolutely separate, not only from other prisoners, but from each other. We are gratified also in being able to announce that we have recently been assured by Inspector Noxon that he and the Provincial Secretary have under consideration some important changes in the Reformatory for Women which will be carried into effect early next year—changes that will render it possible to effect a proper classification of the inmates.

We desire to again call attention to the great need of some remedy being found for the anomalous state of affairs whereby delinquent boys all over the Province are sent either to jail or allowed to go to the bad "on suspended sentence," instead of being sent to the Industrial School or "placed out" by the Children's Aid Societies. In some of these cases, possibly corporal punishment by a judicious officer of the court would have a salutary effect.

#### THE INDETERMINATE SENTENCE AND PAROLE SYSTEM.

During the last session of Parliament Dr. J. T. Gilmour, Warden of the Central Prison, and Hamilton Cassels, Esq., acting as a deputation from our Association, had an interview with the Minister of Justice with regard to the adoption, in Canada, of the Indeterminate Sentence and Parole System, and we were hoping that the necessary legislation would have been introduced before the close of the session, but in this we have been disappointed. The Montreal Prisoner's Aid Association, we are pleased to state, has kindly offered to join us in a second deputation to wait upon the Minister of Justice.

#### THE TREATMENT OF INEBRIATE PRISONERS.

About twelve months ago the attention of the members of the Executive Committee of the Prisoners' Aid Association was called to the question of the practicability and advisability of affording prisoners addicted to alcoholism, medical treatment for their inebriety, while undergoing imprisonment. Pressure was brought to bear from two different sources for the purpose of securing the influence of the Prisoners' Aid Association in favor of the adoption of the particular remedy in which they were respectively interested, financially or otherwise. These efforts on behalf of proprietary remedies were made so persistently and perseveringly that it was deemed wise to appoint the Secretary of the Prisoners' Aid Association a commissioner to investigate the different modes of treatment, and also to formulate a scheme, if possible, for the economical treatment of pauper inebriates, such as could be endorsed by the Association and recommended to the favorable consideration of the Government. In executing this commission, he visited three institutions in Canada devoted to the treatment of inebriates, and four in the United States, and he conferred with the medical superintendents of these institutions and others, some of whom have more than a national reputation in their department of scientific medicine.

The Secretary found that proprietary remedies have no advantage whatever over remedies known and used by the regular profession; that in fact the ingredients in some of these proprietary remedies are injurious, and that according to high and disinterested authority insanity and suicide have actually resulted from their use. He found moreover that about 50 per cent. of those taking the

best known of these proprietary remedies relapsed in nine months, and after a period of two years these relapses amounted to about 75%. On the other hand, he found that on collating statistics both from England and the United States, of those taking treatment in hospitals conducted by members of the regular profession, only about 60% relapsed in 10 years; that is, that fully one-third were permanently reformed.

The practical recommendation of the Secretary regarding the treatment of pauper inebriates in Ontario have been submitted to the Board of Managers and the matter is now under consideration.

Before closing this report we desire to express our obligations to the Womans' Christian Temperance Unions and to the National Council of Women, for kind co-operation in the work of prison reform.

During the year 110,000 pages of prison reform literature was printed the greater part of which has been distributed.

A. M. ROSEBRUGH,  
*Secretary.*

S. H. BLAKE,  
*President*

#### CENTRAL PRISON SABBATH SCHOOL.

I have the honor to present the annual report of the work carried on in the Sabbath School at the Central Prison for the year ending 30th September, 1898.

During the year the average attendance per Sabbath has been, of teachers 27½, of scholars 223.

For five weeks we were unable to hold any services, owing to the disastrous fire in the main building, which partially destroyed the chapel; but this temporary interruption of our work only helped to show us how greatly we would miss the privilege that we now enjoy, of ministering to the spiritual needs of the men, were we to be deprived of it.

In connection with the Sabbath School, a prayer-meeting is held every Monday evening, for one hour, at which two or three of the teachers are always present, and the attendance at which on the part of the men is confined to those who are sincerely seeking to gain strength to lead better lives. We consider this a very helpful and encouraging feature of our work.

The courtesy and consideration of the Warden and other officers of the Prison have, as usual, been all that could be desired and we have pleasure in extending to them our grateful acknowledgements of their kindness.

HAMILTON CASSELS,  
*Superintendent C.P.S.S.*

## LIFE MEMBERS.

His Excellency The Earl of Aberdeen.  
 Hon. E. J. Davis.  
 W. Davies, Sen.  
 Mrs. Massey Treble.

NOTE.—Anyone paying twenty-five dollars at one time is entitled to become a Life Member.

## AGENT'S REPORT.

In presenting my annual report I desire to note the following:—

The men discharged from the Central Prison and Toronto Jail during the year has been shown that attention which is the aim of the Association to extend to them on their release. Assistance of a practical character has been given to many from both institutions. Meals and lodgings have been most acceptable to many, while others have had tools purchased for them, or railway fares advanced in order to reach their homes, as the case might be. One of these men was helped in starting a legitimate business which has proven most successful and profitable, and he feels very thankful for the assistance rendered. The families of several prisoners have been supplied with groceries and fuel during the severe winter months. But few prisoners have had cash loans advanced on their discharge. Besides having assistance of a tangible nature, an encouraging word has been spoken to the men when starting out to begin life again as a free citizen.

Those prisoners whose homes are in Toronto, and who have trades, when questioned as to their prospects of obtaining work when released have, in most cases, expressed their ability to find employment without assistance.

Nearly every request for assistance in this direction has come from men who have never resided in Toronto but who desire to remain in the city when discharged. This wish on the part of single men, and also the desire of young married men, with little or no means, to have their wives come to the city while they are doing their terms of imprisonment, we seek to discourage. The result of encouraging this class to become residents of Toronto will be apparent to all.

I regret to state that so many of the young men whom I meet in the prisons are there through the use of intoxicating liquor. Many have expressed their desire to be free from its influence, but so long as saloon doors are open and boys congregate about them, so long may we expect to see our prisons filled with young men who are living the first half of life so as to make the last half miserable.

It is gratifying to report that the Monday evening prayer-meeting which was started at the Central Prison over a year ago continues to be well attended. Some of the men, after their release, have expressed themselves to this effect. "If a man wishes to reform while in the Central Prison he has every encouragement to do so."

In closing I wish to thank Warden Gilmour and his officers at the Central Prison, and Governor Green and his staff at the Jail for their courtesy and co-operation in everything pertaining to the well being of those committed to their respective institutions.

FINLAY SPENCER,  
 Agent.

ONTARIO REFORMATORY FOR BOYS.

---

## ONTARIO REFORMATORY FOR BOYS.

The number of commitments is fifty-two as compared with thirty-seven in 1897. Of the total commitment, forty-three are of Canadian, and nine of foreign birth; while fourteen were thirteen years of age and under, and thirty-nine were over thirteen when committed. Of the whole number forty-three were committed for larceny, nine in the more serious, and thirty-four in the minor degree. The number apprenticed out is five, reprieved sixteen, and escaped one. The average population is 123 as against 134 the previous year. The good discipline, elevating in character, that has marked the management in past years, has been well maintained during the year. The boys are kept in full activity whether at work or play, and the days are fully occupied in the one way or the other. The regular hours of work are strictly observed, but no less strictly are the hours of recreation when an active participation on the part of all is required. There is a thoroughness in all this, that impresses upon the character of the boys that whatever it is well to do, should be well done, and with hearty energy and will.

There have been better results obtained from the farm than in the previous year, and, it is expected there will be still further improvement in its cultivation, and in the increase of its products. The inmates receive a fair amount of training and instruction in farming and gardening, and in the several trades of shoe-making, tailoring, carpentering, steam-fitting, etc., to fit them in a considerable measure for general usefulness in the ordinary walks of life. No doubt more could be done in this way under more favorable conditions, as to location and adaptability of surroundings; but there is manifest an earnestness on the part of management and staff to make the most of existing conditions, and to advance the interests of inmates and of the institution as the opportunity offers.

The buildings and grounds have been maintained in good order and in an excellent sanitary condition.

Their general appearance is neat and attractive, and the grounds especially present an attractive object lesson to the inmates as to the results that may be obtained by industry and thoughtful care.

The total cost of maintenance is \$28,628.38 and per capita, \$232.34 as compared with \$31,601.32 and \$235.82 of the previous year. The reduction of population has made it possible to effect economies in expenditure, which is being availed of wherever possible.

The several reports in connection with the work of the institution are herewith transmitted.

(Signed)      JAMES NOXON,  
Inspector.

## ONTARIO REFORMATORY FOR BOYS.

The summary given below shows the operation of the Reformatory during the year, as well as in the two preceding ones.

### REPORT OF SUPERINTENDENT.

Again, as will be observable from the tabulated returns now before you, we have to report a decrease in population, the number of inmates averaging only 123 for this year, as against 134 last year, and 150 the year preceding.

This year, under your wise direction and best assistance, the strictest economy in all matters, within and without, has been exercised. In this connection the staff has been reduced to the lowest possible standard, consistent with safety and efficiency, and in this particular feature we are, if anything, sailing a little too close to the wind should any unusual or unlooked for emergency present itself. The supply of fuel was limited to the immediate needs of the year, and other economies in similar lines were also rigidly enforced. No expenditure of any moment was incurred without your sanction and concurrence, and this only was obtained after reasons, satisfactory to you, had been given for the contemplated outlay. Through this careful supervision, together with reduced numbers to feed, clothe, and educate, and with lower prices for many of our supplies, the gross expenditure for the year, as compared with that of last year, is close on \$3000.00 less, yet the per capita rate is only a fraction under that of 1897, the figures standing thus: 1897, \$235.82; 1898, \$232.80 per capita, just \$3.00 per head per annum under that of the former year. The Feed and Fodder account, owing to various favouring circumstances, was just one-half of that of the previous year, and shows a saving in that item of over \$500, and had this particular saving not been made the per capita rate, even in the face of the other economies specified, would have been greater than that of 1897.

The above facts are emphasized for the purpose of showing that it is with public institutions as with railroads, passenger steamers, in fact, all organizations requiring assistants, the average cost of moving or carrying on the business in hand increases or diminishes in the ratio of the greater or lesser number of people or pieces of goods, etc., handled.

[Will not seek to have the information conveyed in the foregoing sentence copyrighted or otherwise protected, fearing its originality might be called in question; but will consider ourselves well repaid for drawing attention to such self-evident results if a certain apparent obtuseness in relation to matters affecting rates per capita be thereby enlightened.]

Regarding matters more immediately relating to the inmates, and to the progress and advancement manifested by them during the year, one may say—without being over optimistic—that in this connection good grounds for satisfaction have been given. In the first place, there has been much less unrest displayed by the boys than in any year of the past twenty. This is shown by one only attempt at escaping having taken place during the whole year—meaning thereby

one worthy of being formally reported to you—although to some extent the personal liberty permitted embraced a wider range, and in consequence greater freedom of action. Of course, in the monthly punishment returns there are, now and then, attempts at escaping noted, but these being but few, and of a futile, foolish, and ill-considered character, easy of frustration, and confined to the homesick and the thoughtless, hence not taken into account. This freedom from restlessness indicates that the opposite features, that of contentment, cheerfulness, and hopefulness—the foundation stones of all true progress—have been the prevailing characteristics of the year in respect to the great majority of the boys in charge, and we have reason to hope that your personal observations during official visits will justify you in accepting our conclusions in this relation. Encouraged by this presumption, will now proceed to discuss other matters of greater or less importance connected with the present status and future better development of the institution, with the intention of making a few suggestions calculated to have its mission, and the means and appliances at hand towards the full accomplishment of this, more widely known and more justly estimated.

The traditions—unholy, hurtful, and injurious—connected with the Reformatory and its operations during the first twenty years of its history, still influences the minds of many; hence some concerted effort should be made for the removal of the false notions entertained in respect to its condition, equipment, and its present aims and objects. Twenty years ago it was a prison; we might say a penitentiary, in its every and worst aspect. Structurally, its exterior presented, and, unfortunately still presents, owing to the difficulty in removing the iron bars imbedded in the outer walls, many of the objectionable features then identified with prison construction. Interiorly, these features were even repellant, every repulsive characteristic of the old-time prison being in evidence. Cellular structures, provided with strong iron gates, for sleeping apartments these being furnished with plank beds, with the coarsest of rugs for coverlets, and sheets and night shirts forbidden luxuries. Decency forbids further description, but it may well be inferred that all other furnishings, etc., were in harmonious relation with those particularized. Dungeons and cat-o-nine tails for the juvenile offender were at all hours available, together with every other appliance of corresponding repulsiveness wherewith to awaken and stimulate a desire for better things in the breasts of the unfortunate boys sent to enjoy and participate in the graces and blessings (?) which necessarily have flowed from the free exercise of these agencies expressly in operation for—save the mark—their reclamation and rehabilitation.

But why dwell longer on the repressive and depressing character of the discipline of the institution, and of its unwholesome surroundings, when first the writer visited it in the summer of 1879; but rather let us console ourselves by contemplating it in the entirely revolutionized and greatly improved aspect it now presents. Yet this enjoyment must not be monopolized solely by us; hence it is to be hoped that you will consider the wisdom of making arrangements whereby, next summer, a visit from the magistracy and the judiciary of the Province may be made agreeable, profitable, and instructive. Besides, by such visits, much, if not all, the unfavourable traditions transmitted in respect to the institution will be dispelled, and, instead, a wider, better, hence more appreciative knowledge of the means now in operation for the lasting betterment of those relegated to its charge, will thereby be diffused.

The returns from the farm and garden were, considering the droughts of the early summer, most satisfactory; in fact, much beyond the average in quality and quantity, the root crops especially shewing a plenteous yield.

Had, in the early part of the year, fears respecting the output of the piggery; but, further on in the season matters looked brighter, resulting in our having an abundant supply of well-fed, well-cured bacon, a toothsome dish which, with tender cabbage, the lads smilingly enjoy on the days on which this feast is set before them.

I have the honour to be, Sir,  
Your obedient servant,

THOMAS McCROSSON,

Superintendent.

JAMES NOXON, ESQ.,

Inspector of Prisons, etc.,  
Toronto.

### STATISTICAL TABLES.

## SURGEON'S REPORT.

SIR,—I have the honor to submit the medical report of the Ontario Reformatory for Boys for the year ending Sept. 30th, 1898, and in doing so am glad to be able to state that we have had no deaths during the past year.

The boys have enjoyed good health and no epidemic or disease of a very severe nature has visited the Institution.

A case of measles developed in one boy a few days after his arrival and before the disease died out thirty-seven were sent to the hospital but all recovered without any complications.

We had one dislocation of the elbow, one of the shoulder and three cases of fracture of the arm with good results.

This is not a very long list of accidents when we consider that in addition to the ordinary games and different occupations, the boys play Lacrosse and *Rugby Football*.

About the ordinary number had coughs and colds, and during the late winter and early spring we had a few cases of pneumonia.

A number of minor ailments are treated as well as some cuts and bruises but nothing of a serious nature.

Some years ago we complained of the inadequate hospital accommodation but now we have all the accommodation required, and the present system of allowing the boys to act as nurses under the supervision of the day and night attendants has proved a great success.

A smart, intelligent boy is selected to take charge of the hospital who is treated with great respect by the other boys and he has no trouble in managing the patients in his charge.

This plan has had a good effect and secures care and attention for the sick that could only be attained by the employment of a trained nurse, in fact the hospital boy is only second to the nurse in the faithful discharge of his duties and I would suggest that a small sum be allowed him when he leaves the Institution in recognition of his services and for the encouragement of others that follow him.

The sanitary condition of the buildings is good and all parts kept scrupulously clean and neat, and habits of personal cleanliness inculcated.

The boys bathe regularly in the bay during the summer season and during the cold weather bathe in the large swimming bath which is heated to the proper temperature by steam.

They receive plenty of good food and the arrangement of the hours for work, play, study and rest insuring the proper amount of each gives an appetite that can only be rightly appreciated by a visit to the Reformatory during the meal hour.

Some critics of the Reformatory have complained that the boys are too well used, (better than the ordinary outside boy with no offence to expiate) but when we remember that the main object is not to punish but to lead the boys to forsake and forget the old life with its associations and hardships and fit them for good citizenship, we at once see the wisdom of kind and paternal treatment.

Good food, and plenty of it, is necessary to secure growth and proper development, making the playground pleasant, keeping the building and dormitories clean, tidy and inviting, and surrounding them with beautiful grounds filled with

shrubs and flowers makes the boy more careful of himself, induces self-respect and raises him above his former level.

All these things tend to produce contentment, happiness and health, and when a boy leaves this Institution he is better physically, morally and mentally than when he came, and consequently better fitted to take his part in life.

I have the honor to be, Sir,  
Your obedient Servant,

P. H. SPOHN,  
Surgeon.

JAMES NOXON, Esq.,  
Inspector.

### SCHOOL EXAMINATIONS.

JAMES NOXON Esq.,  
*Inspector of Prisons. Etc.*

SIR,—I have the honor to report on the condition of the schools at the Reformatory for Boys, during the year 1898.

As in former years, I visited the school twice, in the months of April and October.

At my visits this year I found two of the teachers, Messrs. Macpherson and Maenamara still there.

Owing to Mr. Ferguson's having left, the organization of the school was somewhat different from what it was in former years. Mr. Maenamara's part, that is, the Catholic section, was, of course, the same as ever, but Mr. Macpherson was in charge of the classes formerly taught by himself and Mr. Ferguson. Each boy in the Reformatory is supposed to be in school three hours every day. In the forenoon, the pupils in the third and fourth books are in school, and in the afternoon the pupils in the first and second books.

In April there were 37 present in Mr. Macpherson's forenoon school, and 36 in the afternoon school. Of these, 13 were in the fourth book, 24 in the third book, 25 in the second book and 11 in the first book. In October there were 30 present in the forenoon school, and 53 in the afternoon. Of these, 19 were in the fourth class, 12 in the third, 27 in the second and 25 in the first book. At my first visit in April, there were 10 pupils in the forenoon school and 15 in the afternoon in Mr. Maenamara's room. At my second visit there were 8 present in the forenoon and 14 in the afternoon. Of those present in April, 3 were in fourth book, 7 in the third book, 10 in second and 4 in the first book. In October there were 1 in fourth book, 8 in the third book, 8 in the second book and 5 in the first book.

While at the Reformatory, I examined in reading, grammar, arithmetic, writing, dictation and literature, and found the results very good in nearly all cases. The writing was, as usual, excellent. The discipline in both rooms was good. Owing to the crowded condition of Mr. Macpherson's division, it was difficult to maintain order and at the same time to teach with effect. And a teacher, to be as successful as Mr. Macpherson is, must have abundance of nervous energy and recuperative powers. Especially is this so when the ventilation is as bad as I found it in his room. It is difficult to keep air in motion there. It cannot be

done from the windows alone. The only way of doing so is by making a couple of holes in the partition between the two class rooms two or three feet from the ceiling. Unless this is done I don't see how Mr. Macpherson can be allowed to occupy this room during the winter months.

I found both of the teachers, through a misunderstanding, without the regular school journals since last April.

Any teacher, to be successful, needs to read some periodicals treating on the work of the school-room, particularly is this necessary in the Reformatory, where the teachers scarcely ever hold any communication with other teachers. When I spoke of this matter to the warden he immediately ordered two copies of the *Canadian Teacher*.

I am, Sir,

Your obedient Servant,

ISAAC DAY, B.A.

MR. NOXON,

Inspector of Asylums, etc.,  
Toronto.

ORILLIA, Oct. 14th, 1898.

#### PROTESTANT CHAPLAIN'S REPORT.

October 25th, 1898.

*To the Superintendent of the Ontario Reformatory for Boys:—*

DEAR SIR,—I have great pleasure in presenting you with my report as Protestant Chaplain of this Institution for the year ending September 30th, 1898.

Nothing out of the ordinary has occurred during the year. The work has gone on regularly and smoothly. The attention paid by the boys in the religious services I have held with them during the year, and the uniform interest they have shown therein, is one of the best proofs that such services have done them good. A congregation that is interested and attentive at Sabbath services is always a benefitted congregation.

Of course there is the eye to mischief and the surplus energy that belong to boyhood to healthy boyhood everywhere. This I have no disposition to destroy, and I have no trouble in keeping it in proper bounds in any dealings I have with our boys. Moreover there are attendants present at all our religious services who exercise the functions of discipline whenever it is necessary, and that I am compelled to say is very seldom. It is a well ascertained fact with us that the largest fullest benefits of Reformatory work upon the boys shows itself in an improved character, and a changed life, after they are discharged from the institution. So many of them do well that it is a great encouragement to do the best we can for those we have in hand.

I counted a hundred and ten boys and young men in our regular Protestant service last Sabbath morning. Surely to rebuild the character of all these, to make good citizens of them, to save their souls, is a work of the highest importance, and as enduring as eternity. What work is greater?

On Sabbath we have two regular services. Our organist, Miss Cunningham, and the choir of twenty voices, contribute much to the interest and effectiveness of the services. In addition I have morning and evening prayers with the boys every day of the week. I am also afforded every opportunity by yourself of having private talks with the boys under my charge as often as I wish. A few words, earnestly, kindly spoken, in this manner is often most effective. By these means and added thereto good reading, which is provided for them with God's blessing, I hope to do my share in the permanent reformation of the boys committed to us.

Yours respectfully,

STEPHEN CARD,  
Protestant Chaplain.

---

### ROMAN CATHOLIC CHAPLAIN'S REPORT.

October 25th, 1898.

THOMAS McCROSSON, Esq.,

*Superintendent Ontario Reformatory for Boys.*

SIR.—Being as you are aware but a short time—less than three weeks—in charge of the spiritual affairs of the Roman Catholic inmates of this institution, before the ending of the official year, my experience of the work is necessarily very limited. Yet, even in this brief period, my observations lead to the conclusion that my predecessor in office, Rev. Father Gibbons, had not been neglectful of the serious and important duties which had devolved on him in relation to the spiritual welfare of his immediate charge. This is evinced by the quiet, earnest attention displayed in the chapel during the services, and more especially so during the Holy Sacrifice of the Mass.

I have the honor to be, Sir,

Your obedient servant,

JOHN McEACHREN,  
Roman Catholic Chaplain.

---

### PROTESTANT SCHOOL MASTER'S REPORT.

REFORMATORY FOR BOYS, Oct. 25th, 1898.

SIR.—I have the honor to transmit the annual report of the Protestant School for the year ending Sept. 30th, 1898.

During the first six months of the year two schools were in operation, at the expiration of which term they were amalgamated, the assistant teacher retiring.

The number of boys on the register of the Protestant School at the beginning of the year was 93, at the close 99, an increase of six during the year. Since that time the number has increased to 109, of which 91 attend school and 18 are continuously at work.

The report of progress and promotion is not, nor can be, so favorable as preceding ones owing to the union of the schools which has doubled the work of the teacher thereby lessening the chances of the pupils advancement.

The tabulated statements of attendance, etc., are herewith enclosed.

I am Sir,

Your obedient servant.

J. C. MACPHERSON,

Protestant Teacher.

JAMES NOXON, Esq.,

Inspector of Prisons, etc., Toronto.

Statement showing, 1st, number of boys in each class on October 1st, 1897; 2nd, number of boys received in each class during the year; 3rd, progress and promotion; 4th, number of boys discharged; 5th, number of boys remaining in each class on September 30th, 1898.

	No. of boys on register on October 1st, 1897.	No. of boys entered during the year.	Position in class on September 30th, 1898.								Boys discharged during the year in each class.

## ROMAN CATHOLIC SCHOOL MASTER'S REPORT.

ONTARIO REFORMATORY FOR BOYS,

PENETANGUISHENE, October 3rd, 1898.

SIR.—I have the honor to transmit to you the following report of Catholic School for year ending September 30th, 1898 :

During the year sixteen boys left the school, nine having served their full time, the others were liberated before expiry of term of sentence. Twelve boys were admitted, six of whom did not know the alphabet, though some of them were between the ages of twelve and fourteen years.

The Public School programme forms the basis of study, but the greater time and attention are given to reading, spelling, writing, arithmetic and English language.

Christian doctrine is also taught to all the classes. The enclosed tabulated statement shows the attendance, changes and position in classes during the year.

I have the honor to be, Sir,

Your obedient servant,

J. McNAMARA,

Catholic teacher.

MR. J. NOXON,

*Inspector of Prisons, etc., Toronto, Ont.*

ANDREW MERCER  
REFORMATORY FOR FEMALES  
AND REFUGE FOR GIRLS.

---

## ANDREW MERCER REFORMATORY AND REFUGE FOR GIRLS.

The number of commitments to the Reformatory were 104, against 97 of the previous year. Of the number committed, 58 were intemperate; 20 could neither read nor write, and 73 were under 30 years of age. The number of commitments to the Refuge were 17, against 22 the previous year, all except one were over 13 years of age, and 9 could neither read nor write.

The average population of the Reformatory is 55, as compared with 59½ in 1897, and of the Refuge 41½ as against 43¼ the previous year. Combined, the average is 97, against 103 in 1897.

The per capita cost of maintenance is \$208.82 as compared with \$206.62 and the net cash revenue \$1,013.34, as compared with \$1,125.99 for 1897. Laundrying is the chief revenue-bearing industry, as it is best suited to the short-term of sentence, and the almost entire absence of industrial art amongst those committed to the institution.

Of the total commitments, 77 were for less than 6 months, while only one of the whole number was skilled above the level of the crudest manual labor, many, perhaps the larger number of the inmates never received a home training, or were ever taught to usefully employ their time as a means of self support. There can be no improvement in the social condition of such as these until habits of industry have been formed and skill in the use of the hands acquired as a foundation upon which to build a confidence in their ability to maintain themselves in the honest pursuits of life. This once given it is not difficult to arouse the moral sense to a hope that there may yet be for them the reward of a better life. It is however, simply a delusion to expect this can be accomplished in the short term of a six month's sentence; and until commitments are for a longer period, or what would be still better an indeterminate period, little can be done in the way of reformatory work. Before this institution can be made to fulfil the end for which it was established, the statutory enactments regulating it, require to be so amended as to make a simple sentence to the Reformatory constitute an indefinite term; not exceeding the full limit provided by law for the offence committed. Without change of organization however, something more should be done to improve the management by making it practical to secure a better classification of the inmates. This can be accomplished by constructing floors between each of the three tiers of cells in the present corridors, thereby converting the two corridors into six separate ones, and giving ample facilities for the purposes required. If this were done, there would be but little difficulty in so ordering the movements of the separate classes, that at no time would they come in contact or be able to communicate with one another.

### REFUGE FOR GIRLS.

The Refuge for Girls has been invaded by a change of conditions, which its organization is entirely inadequate to meet.

Previous to the passage of the Act for the Protection of Neglected and Dependent Children its inmates were composed of young children from eleven to fourteen years of age, the average being eleven and one-half years. These after having become orderly in conduct and submissive to authority, were apprenticed out into respectable families where their education received attention, and they

were instructed in all the domestic duties to fit them for useful positions in life. The present inmates are from 13 to 18 years of age, the average being  $14\frac{3}{4}$  years and having run the course of childhood in utter neglect in most cases, it is not surprising nearly all have fallen before being committed to the refuge. This itself is a condition which prevents early apprenticeship, and the necessary course of training to uplift the moral nature and give it sufficient strength of fibre to maintain the womanly character, is a long and patient one. Nearly all the inmates are without education, are untrained in any useful employment, and being on the verge of womanhood their destiny, whatever it is to be in the world, be it for honor or be it for infamy, will depend on the care they may receive while in the refuge.

If neglected, or if the treatment be not adequate to their needs, the consequences will be many hopelessly ruined lives that might have been saved, and an amount of human misery from which all must recoil. The present class of inmates has brought into action forces of evil, both too active and too strong for the provision heretofore made to cope with them; and it has become necessary to introduce into the work greater moral, educational and industrial strength to direct and control their daily lives and activities. To do this, the training and instruction in all that goes to build up their characters and to practically equip them for positions of usefulness in life, must be aggressive, ever pressing on all sides, and with every waking hour occupied and under constant supervision. While a Refuge in name, existing conditions demand all the appliances and all the energies of a Reform School if efforts are to be successful in eradicating the evils which have overtaken these young lives, in implanting in their natures the womanly virtues, and in investing them with the industry and skill for their independent self support when they go out to take their places as members of society.

Average number of inmates, 1897 .. .. 103

" " " 1898 .. .. 97

TORONTO, November 10th, 1898.

JAMES NOXON, ESQ.,

*Inspector of Prisons, etc.*

SIR,—I beg to submit the Eighteenth Annual Report of the Andrew Mercer Ontario Reformatory for Females and Refuge for Girls for the year ending September 30th, 1898.

Since my last annual report the refuge branch has been separated from the Reformatory. The girls at the Refuge will, under the present management, have opportunities of improvement which were not possible heretofore.

A better classification of the women of the Reformatory has been urged and suggestions made which cannot, at present, be carried into effect until certain structural changes are made in the Reformatory. I would suggest that a recreation room for the inmates be provided where they could meet during the time of relaxation from labor. The attendants on duty could then more easily keep them under close supervision and prevent any private conversation which might be of an injurious nature. Those inmates who can read are provided with books from the Reformatory library, some harmless amusement could be provided for those who cannot read.

A sitting room for the attendants is also very much required.

I again would urge the necessity of longer sentences as the best results have in nearly every case been obtained from those women who have been sentenced for the longer terms.

The daily average population since the opening of the Reformatory eighteen years ago is 89; the average sentence for the time, 9 months and 11 days.

I am glad to be able to report that the general conduct of the women during the year has been satisfactory, as is always the case, it is the same few who are guilty of refractory conduct, using bad language and disobedience: the majority conduct themselves properly.

On December 22nd the Institution was honored by a visit from Her Excellency the Countess of Aberdeen—the women were deeply affected by the kindly sympathy she evinced, and by the interest Her Excellency took in their welfare.

Ninety-five women were discharged on expiration of sentence—of these 51 returned to parents or relatives, 2 went to the Convent of the Good Shepherd, 15 were provided with situations by Mrs. Bellamy, Agent of Prisoners' Aid Association, 1 went to the House of Industry, 1 obtained a situation through a member of the Reformatory staff, 25 returned to their old vicious life. Each woman, on her discharge, receives sufficient clothing, in addition to what she brings in, to make her appear respectable. Those women who have served a sentence of twelve months or more, having conducted themselves well and having worked faithfully, are provided with an outfit of better material.

There was one infant in residence October 1st, 1897, two were brought in by their mothers—of these, one was taken out by its mother, and one is at present in the Reformatory.

Experience has proved that, for many reasons, laundry work is one of the most suitable employments for our women. During the year, 97,207 articles were laundried which includes the laundrying for the Reformatory. In the work-room, 1,447 articles were made and 564 pairs of socks, stockings and mitts were knit.

The following improvements and repairs have been made: Great convenience has been experienced by the attendant in charge of the laundry by a door having been opened giving access to the drying yard: she can now have all the women who work in the laundry under her personal supervision all the time.

A lavatory has been made in the front part of the house for the convenience of the officers. The changing of the old plastered ceilings for the steel fire-proof ones have been continued. Fifty wire screens were made and placed on all the rear windows of the inmates bedrooms, to prevent them throwing things out which they could do through the iron bars which were on before these screens were placed inside the iron bars. A room just opposite the chapel was fitted up for a Catholic chapel, this change is a convenience as both religious services are held at the same time. The hospital has been divided, the old one is now kept for contagious diseases. A room at the end of Corridor G. has been fitted up in which a part has been partitioned off to serve as an operating room. The stables have been repaired, stalls changed, etc. A fence has been built dividing one of the airing yards from the coal yard.

The health of the inmates has been good, no deaths during the year. Since the opening of the Reformatory, August 1880, only nine inmates have died in the Institution. During the last ten years only two have died.

The necessity of further protection in case of fire is being considered. I have forwarded you the report of the expert you sent to make an examination of the Institution and report.

The green-house has been done away with; the plants required for bedding out will now be provided from the Central Prison green-houses.

A linoleum is required for the front entrance; also a uniform for the attendants, and the structural changes in contemplation, which will be decided upon later, to effect a better classification of inmates.

I would like a grant of fifty dollars to make an addition and to reconstruct the Reformatory library. Seventy-five per cent. of the women can read; they appreciate the library very much. No addition has been made or any books replaced for four years. The books originally were of a cheap kind, and many now require replacing. I consider that the women take very good care of the books lent them.

There have been no changes in the staff. The regular religious services, Protestant and Catholic, have been faithfully carried out during the year. The Saturday afternoon classes for those who cannot read or write, have been held regularly by an agent of the Prisoners' Aid Association.

I have the honor to be,

Sir,

Your obedient servant,

M. J. O'REILLY,  
Superintendent.

TORONTO, October 1st, 1898.

JAMES NOXON, Esq.,

*Inspector of Public Charities.*

SIR:—I have the honor to submit the following report of the Refuge for Girls for the year ending September 30th, 1898.

Number committed since opening .....	244
“ transferred from Reformatory .....	57
Total number in Refuge since opening in 1880.....	301
Total number apprenticed .....	107
Number in apprenticeship September 30th, 1898.....	13
Number remaining in the Refuge September 30th, 1898 .....	43

*Age at Entrance.*

In 1894 the average age at entrance to the Refuge was  $11\frac{1}{2}$  years, in 1898 it became  $14\frac{3}{4}$ . The Act for the Protection and Reformation of Neglected Children made the Children's Aid Societies the legal guardians of all neglected and dependent girls under thirteen years of age. The age limit for commitment to the Refuge was set at between thirteen and eighteen years and that only for vicious and criminal cases.

By legislation this change in the *morale* of the inmates has been brought about but no provision has thus far been made by the Government to meet the need thus created and to give to these unfortunate and neglected girls of our province the best advantages possible.

I earnestly commend this to your attention.

I have the honor to be, Sir,

Your obedient servant,

M. C. ELLIOTT.

## REPORT OF THE SURGEON.

TORONTO, 1st October, 1898.

JAMES NOXON, Esq.

*Inspector.*

SIR,—I have the honor of herewith submitting to you my Eighteenth Annual Report as Surgeon of the Andrew Mercer Ontario Reformatory for Females, and the Industrial Refuge for Girls, embracing the year ending 30th September, 1898.

## THE REFORMATORY FOR FEMALES.

Another year has closed without a death or any very serious illness in the Reformatory proper.

Among the new inmates the past year there have been, as in previous years, several unfitted or physically unable for work of any kind. This cannot always be anticipated by the committing magistrate. But where there is clearly insanity they should be diverted through other channels. During the year two insane women were committed direct to the Reformatory, one in May and one in July. Of course they were in time transferred to asylums; but in the meantime they interfere with the duties of the staff and discipline of the institution.

On the opening day of the past year there were no inmates in the hospital, no inmates sick, save only the three inmates of the Specific Ward under treatment for syphilis.

During the year the new hospital quarters were fitted up and occupied. Their situation, on the same floor as the surgery and dispensary at the east end of the building, has proved much more convenient than when situated on the top floor of the building. The former quarters can still be utilized as an isolation hospital in case of an outbreak of an epidemic, or the prevalence of contagious disease.

I feel constrained again to suggest, as I did last year, that in view of the size and construction of the buildings, their isolated situation, distance from the fire brigade, and the great danger to the life of the staff and inmates in case of a fire gaining headway therein, the chief of the fire brigade, or some person capable of doing so, should be deputed to visit the institution, examine the means of exit, and give instructions to the staff, mostly women, as to what disposition to make of the inmates in the emergency of fire in any part of the building, at any hour of the day or night.

At irregular intervals during the year, I have partaken of the inmates dinner, and have invariably found it ample in quantity and of good quality and varied in materials. This has doubtless to some extent deterred fault finding on the part of inmates. The baking and cooking reflect credit on the part of the inmates engaged thereat.

Only on two occasions have I had to condemn supplies furnished the Reformatory, and this applied to a portion only of a supply of butter.

Herewith will be found the usual tabulated statements.

### RECORD OF CASUAL SICK TREATED.

## THE REFORMATORY HOSPITAL.

Six different inmates occupied the hospital during a portion of the year, and one remains in at its close. For a large part of the year the hospital was vacant. Those only sick for a day or two, or mild cases, remain in their cell. There were never more than two in the hospital at the same time, and all the cases recovered. The ailments treated with the time spent in the hospital were as follows: 1, Jaundice 28 days; 2, Menorrhagia 22 days; 3, Menorrhagia 6 days; 4, Dislocated ankle 8 days; 5, Childbirth 16 days; and 6, Disorders of pregnancy and awaiting childbirth 15 days, and remaining in at the end of the year.

## THE NURSERY DEPARTMENT.

The number of babies brought into the institution was under the average of former years. One still-born babe was the only birth during the year, an unusual fact.

## THE REFORMATORY AND REFUGE STAFF.

The health of the Reformatory and Refuge Staff the past year has been exceptionally good, there having been but one case of severe or dangerous illness. The number of presentations for treatment was 115.

## THE SYPHILITIC WARD CASES.

At the beginning of the year there were three inmates of the isolated ward for syphilitic cases. During the year there were 8 admissions making 11 in all. In reality there was only 9 separate individuals, as two of the three in at the beginning left on account of expiration of sentence: and these were re-admitted later, on a second commitment to the Mercer. The total time spent therein by each of the 9 was as follows: 1, 128 days; 2, 365 days; 3, 100 days; 4, 175 days; 5, 76 days; 6, 232 days; 7, 68 days; 8, 47 days; 9, 22 days.

The daily average for the year under treatment was 3.32. The year closed with 7 inmates in the ward.

## MONTHLY RECORD OF CASES, OTHER THAN HOSPITAL CASES.

Months.	Casuals or ordinary cases presenting,				Syphilitic cases.	
	Total cases seen	Daily average of cases.	Cases sick and off work.	Daily average of sick.	Total days inmates in.	Daily average.
October, 1897	88	2.84	28	.90	123	3.97
November, "	110	3.66	51	1.70	150	5.00
December, "	69	2.22	24	.77	155	5.00
January, 1898	49	1.60	7	.22	88	2.86
February, "	81	2.90	25	.89	74	2.64
March, "	89	2.00	31	1.00	93	3.00
April, "	76	2.53	22	.73	65	2.16

Totals and averages	1,134	2.76	335	.92	1,213	3.32

Daily average of casuals and syphilitic cases treated for the year, 6.08.

The Hospital and Refuge cases are not included in the foregoing. The same may be said of the staff and the nursery cases.

### THE INDUSTRIAL REFUGE FOR GIRLS.

The health of the girls generally has been good during the year. For a short period in June last there was almost an epidemic of colds and sore throats, all terminating favorably. One Refuge girl on account of her pregnant condition when received was subsequently removed to a hospital. One weak-minded girl was transferred to another institution. One girl, K— McL—, died on the 28th of February, 1897, from acute phthisis. This makes the second death since the institution opened,

### REFUGE PRESENTATIONS FOR TREATMENT DURING THE YEAR.

Disease.	Presentations for treatment.	Disease.	Presentations for treatment.

Your most obedient servant,

JOHN S. KING, M.D.,

Surgeon.

## MERCER REFORMATORY SUNDAY SCHOOL.

The work in the Mercer Reformatory has been prosecuted with much earnestness. During the year the children of the Refuge have met in a separate room for the study of the lesson, under the direction of Miss Elliott and a band of teachers while the women have met in the chapel, with Mr. McMath in charge, assisted by a staff of teachers. The lessons taught are the International S. S. lessons. The quarterly review is in charge of the secretary.

Several women have professed a change of heart, for which we are truly grateful. We carefully, prayfully sow the seed, and trust God to give the increase. We go forth gladly, hopefully in another year's labor, knowing that He is faithful, for have we not His promise. "Lo I am with thee alway?"

We are still hoping, hoping, that the promised classification of the Reformatory inmates will soon be brought about.

Teachers: Mrs. Chamberlain, Mrs. Slocum, Misses Scott, Sams, Wallace, Howels, Kelly, Donovan, McKenzie, Parker, Carlyle, James.

HUGH MACMATH,  
Superintendent.

E. Y. SAMS,  
Secretary

## HOUSES OF REFUGE, ORPHANAGES, MAGDALEN ASYLUMS, HOMES FOR INCURABLES AND CONVALESCENTS. AND COUNTY POOR HOUSES.

---

The number of Houses of Refuge in the Province is 35, which are situated in the cities and towns, and application is now made to have a House of Refuge in the town of Cornwall placed upon the list of charities entitled to receive aid. This class of institutions has shewn the usual improvement during the past year, and much good is being done in providing shelter, food and clothing for their inmates. As a rule, they are cheerful and happy; when helpless and confined to their beds, they are a great care to those in charge. The Government grant to these Homes is seven cents. per day for each inmate.

There are 31 Orphanages in the Province, and the aggregate number of children provided for is 4,480. The inmates are cared for in health and in sickness, supplied with clothing, taught house work, sewing, knitting, etc., they also attend school, and are placed in suitable homes from time to time. Much good is being done in the Province for orphans and the children of poor people. These Homes are mostly managed by ladies of the locality in which they are placed.

Each Orphanage is looked after by a matron and an assistant, who attend to all the requirements. The Government grant is two cents. per day per inmate.

The buildings and grounds of these institutions have shown considerable improvement during the year.

### HOMES FOR INCURABLES.

One more institution has been added to this class, viz., the Home for Incurables, Ottawa. The building and grounds were presented to the city for this purpose. These Homes are for that class of sick and afflicted who are not proper subjects for hospital treatment and not able to care for themselves: they are carefully looked after and made comfortable for the remainder of their lives. The aid which the Homes receive is the same as paid to the Refuges, viz., seven cents per day per inmate.

There are two Convalescent Homes in the Province for the purpose of affording shelter and care for those who have been under treatment in hospitals and are not sufficiently recovered to resume the duties of life when leaving the hospitals. They go to these Homes for a longer or shorter time as may be necessary to fully regain their strength. They are under the management of a

board or committee of ladies who furnish what is required by the Home, and provide a matron, nurses, etc., and look after the management. They receive the same grant as Homes for Incapables.

There has been established in the western portion of the Province five county Homes of Industry, or Refuges for the poor, viz., County of Peel House of Industry, County of Kent House of Industry, County of Norfolk House of Industry, County of Bruce House of Industry, County of Simcoe House of Industry.

The county Homes in operation are all west of Toronto, with one exception which is the Home provided by the Counties of Leeds and Grenville. Other counties are now agitating this question of county Homes for their poor. It is to be regretted that every county in the Province has not ere this provided such an institution. Our gaols are full of poor old men and women, placed there under the vagrancy act, on account of their poverty, many of whom have been in well-to-do circumstances. This is not only a great injustice, but a disgrace to our fair Province, and should be stopped by legislation, unless the counties are prompt in providing Homes for them.

The government has done much to encourage the establishment of these Homes by making a grant to each county, or union of counties, where such an institution is in operation.

The minimum quantity of land required with each county Home is forty-five acres; and the location and plans of building must be approved of by the Government Inspector in order to enable the county to receive the grant of \$4,000.

There has been no increase in the number of Magdalen Asylums during the year. In these institutions two classes are provided for, viz., adult females, and infants and children. The inmates are employed at industrial work of various kinds, and they go out to service and support themselves as opportunities occur.

In the various tables will be found full particulars as to the different classes of Homes, cost of management, number of inmates, nationality and creed.

My inspections during the past year give details of the condition of buildings, grounds, industrial work carried on, records of management, etc., etc.

The usual information obtained from each Refuge, in respect of sex, religious denominations, nationalities and previous residence of the inmates has been summarized as under :

*Sex.*

Male .....	1 470
Female ..	3,010
	----- 4,480

*Religious Denominations.*

Roman Catholic..	2,285
Protestant .....	2,171
Other religions (or not known) .....	24
	----- 4,480

*Nationalities.*

## INSPECTIONS.

My first inspection of the House of Industry, Toronto, for the current year, was made on the 17th March. On that date there were 109 inmates—83 males and 26 females. This is the ordinary population of the House for the winter: in the summer it is somewhat less. The rooms were clean and well kept.

The average number of casual inmates is about thirty; they break stone and cut wood. The old people keep the premises in order and also do the washing and ironing and other work; they are not expected to work if sick, or unable to work. No servants are employed. The staff consists of a superintendent matron, two engineers, fireman, and receiving clerk or assistant superintendent. Only three of the officers are paid: the others work for their keep.

The dietary is very good; it is changed from time to time under doctor's orders.

The new addition is approaching completion, and will increase the accommodation.

A great improvement would be made and afford much needed room if a wing were extended to the south from the main building, and a number of the old buildings that are now there removed.

Some new floors are required in the main building, as well as other improvements.

House cleaning was in progress at the time of my visit.

---

I instructed Mr. Nicholson to make an inspection of this Home. A copy of his report is annexed.

I made an inspection of the House of Industry, Toronto, on the 15th December. I found the new east wing completed and occupied, and the west wing and other additions and improvements nearly finished. The House is being pretty thoroughly renovated as well.

The number of permanent inmates at the time of my visit was 115—97 males and 18 females.

The outdoor relief I found to be about the same as last year. The stone-breaking test is applied to all able-bodied men applying for relief.

The casual ward also affords shelter and food to a large number during the winter. The institution is well managed.

## INSPECTIONS.

I made an inspection of the House of Providence, Toronto, on the 8th August. There were on that day 261 inmates—67 men, 148 women and 46 children. In the incurable ward there were 214—91 men and 123 women.

The private rooms and wards, sitting rooms, dining room, dispensary, working rooms, laundry, wash and bath rooms, water-closets, beds, bedding, etc., were all in good order.

There were 42 deaths among the adults during the year, and 50 among the children: of the latter nearly all were infants under three months of age.

There is a good staff of doctors in attendance.

I instructed Mr. Nicholson to make an inspection of this Home. A copy of his report is annexed:

I made an inspection of the House of Providence, Toronto, on the 1st December, and found it in excellent order in all its departments. The records also were entered up to date.

The inmates numbered 435 on that day, viz, 164 men, 233 women, and 38 children. Of the above number, 213 (100 men and 113 women) were in the incurable wards. The children are sent to the "Sunnyside" Orphanage when four years of age.

## INSPECTIONS.

I made a second inspection of this Institution on the 18th November. The inmates then being cared for numbered 125, viz., 50 males and 66 females

Since the 1st October four were admitted.

I found the premises neat, clean and orderly, and well lighted and heated. The books were properly kept.

## INSPECTIONS.

I visited this Hospital on the 23rd August, when there were fourteen female patients in residence.

Since the 1st October there were 151 admissions and 6 deaths.

The Hospital was clean and in well kept order throughout.

There is a good medical staff and efficient nursing.

## INSPECTIONS.

I instructed Mr. Nicholson to make an inspection of this Home. A copy of his report is annexed :

I made an inspection of this Home on the 12th July. Ten males and seventeen females were registered as inmates on that day. None were sick, and there has not been a death in the Home for over eighteen months. The premises were in well kept order, and the books were entered up.

On the 2nd December I visited this Home again, finding it clean and orderly in every part. There were nine adult males and eighteen adult females in residence, all of whom, notwithstanding their advanced years, were in good health. There is a chapel in the Home, where services are held regularly.

## INSPECTIONS.

I instructed Mr. Nicholson to make an inspection of the Haven. He reported as follows :

According to instructions I made an inspection of the Haven, Toronto, on the 12th August. On that day there were fifty-nine adult females and thirteen infants in residence. The whole institution was in good order, and its work was being successfully carried out.

I inspected the Haven, Toronto, on the 1st December. On that day there were sixty-eight women and fifteen children in residence. Some improvements since my last visit were noticeable in the furnishings of the matron's office and other apartments. The house throughout was in satisfactory order.

## INSPECTIONS.

I made an Inspection of the House of Refuge, Hamilton, on the 5th February. All departments of the Institution were clean and in good order. This is one of the best institutions of the kind in the Province. The inmates on the day of my visit numbered 109: 67 men and 42 women.

I instructed Mr. Nicholson to make an Inspection of this Home. A copy of his report is annexed.

I made an Inspection of this Institution on the 10th December, and found it in its usual excellent condition of cleanliness and order. It is heated by hot water, and lighted by electricity.

There were 104 inmates on this date, viz., 56 males and 18 females in the main building, and 18 males and 17 females in the incurable department, It is a well managed institution.

INSPECTIONS.

This Home was inspected by me on the 4th February, when there were 30 inmates. Their rooms, as well as the wash-rooms, bath-rooms, water-closets, etc., were found to be in excellent order. The records were properly entered up.

I instructed Mr. Nicholson to make a second inspection of this Home. A copy of this report is annexed :

I inspected this Home on the 2nd July. Several new rooms have been added to the accommodation by taking a portion of the girls' dormitory in the orphanage department. The bath-room has also been improved.

There were 29 old ladies registered as inmates on this date. The record shows that four had been discharged and two had died during the year.

The admissions for the same period were six. Everything about the Home was in excellent order.

## INSPECTIONS.

I made an inspection of the St. Peter's Home, Hamilton, on the 4th February. The inmates on that day were nine males and nine females. All the rooms, beds, bedding, etc., were clean and in good order. The books were entered up.

I instructed Mr. Nicholson to make a second inspection of this Home. A copy of his report is annexed.

I made an inspection of the St. Peter's Home, Hamilton, on the 2nd July, and saw the inmates then being cared for, namely, eleven men and eight women. During the year fourteen had been admitted and eight have died.

The buildings and grounds were in satisfactory order, and the books properly kept.

## INSPECTIONS.

On the 22nd April I inspected this Institution. The number of inmates was 39 (21 males and 18 females).

All the rooms, beds, bedding, etc., were in good order, and the books properly kept.

## SECOND INSPECTION.

I made an inspection of the House of Industry, Kingston, on the 15th December. Forty-three old people (28 men and 15 women) were in residence on that day. There was no material change to note, in regard to the building or premises since my last inspection.

A new water-closet has been provided for the old men. The books were properly written up.

## INSPECTIONS.

I made an inspection of the House of Providence, Kingston, on the 21st April. Its inmates on that day were 80 males and 82 females, total 162.

The Institution was in satisfactory order throughout, and gave evidence of good management. The books were properly kept.

## SECOND INSPECTION.

I made another inspection of the House of Providence, Kingston, on the 15th December. On that day there were 180 inmates, namely 91 men and 89 women.

The new Church building, situated near the House, has been completed, and the old chapel has been taken for community rooms. I found no other change in the building or grounds to report since my last inspection. All departments were clean and in good order.

## INSPECTIONS.

I beg to report that I inspected the Home for Incurables, London, on the 4th April. There were 17 inmates on that day—8 men and 9 women.

I found the rooms, beds, bedding, etc, clean and in good order.

The building is heated by hot air, lighted with coal oil, and supplied with city water. There are no bath-rooms or water closets in the building.

No change in the premises since my last inspection. Books properly kept.

I inspected the Home for Incurables, London, on the 24th November, and found it in a clean and orderly condition.

There were 20 patients in residence—8 men and 12 women. There is a trained nurse in charge.

## ST. PATRICK'S REFUGE, OTTAWA.

## INSPECTIONS.

I made an inspection of the St. Patrick's Refuge, Ottawa, on the 24th March. There were forty-eight males and sixty-nine females, making a total population of 117. There was no change to note in the condition of the Institution since my last visit. Cleanliness and order prevailed throughout, and the books were entered up as required.

## SECOND INSPECTION.

There was a population of 109 old people (forty-nine males and sixty females) when I visited it on the 3rd December. The house was in good order, and in every respect a comfortable home for those provided for. There has been very little sickness among them of late. Books properly kept.

## INSPECTIONS.

I made an inspection of this Institution on the 25th April. The population on that day was 97 persons (26 males and 71 females), all aged and infirm.

The management are erecting a large stone building, convenient to the main building, which will accommodate from 100 to 150 more inmates. The books were correctly kept.

## SECOND INSPECTION.

I made another inspection of this charity on the 23rd September. Eighty four old people (29 men and 55 women) were receiving its benefits.

The new wing is nearly completed and the old building is being renovated and fitted with modern improvements. The rooms were in a somewhat disordered state in consequence.

## INSPECTIONS.

This Home was inspected by me on the 26th March. On that date there were forty-three old men registered as inmates. The annual overhauling of the building, cleaning, painting and whitewashing, was going on. The books were entered up.

## SECOND INSPECTION.

When I inspected the Home again, on the 2nd December, there were forty-one old men registered as inmates.

They were all comfortably provided for and seemed to enjoy themselves. The premises were in their usual state of good order, and the books properly kept. Three deaths were recorded during the past year.

## REFUGE BRANCH, ORPHANS' HOME, OTTAWA.

## INSPECTIONS.

I visited this Refuge on the 24th April. The inmates on that day numbered 241, namely 133 adult females and 108 children, the latter from one to fourteen years of age.

Since the first of the year 70 were admitted and 69 discharged. No deaths.

The adult inmates were employed as usual in laundry work, tailoring, book-binding, weaving, housework and gardening. The children attend school daily and are also trained to domestic work.

The buildings were in good order and the books entered up.

## SECOND INSPECTION.

There were twenty aged women in this institution as inmates when I inspected it on the 24th March.

Their apartments were in well kept order. A fire escape had been erected since my last visit. I found the books properly kept.

## INSPECTIONS.

874 I inspected this home on the 24th March. The inmates on that day were 26 adult females and 15 children. There was no change in the building or premises since my last inspection. The rooms were clean and in good order.

Laundry work is the principal industry. Books well kept.

I made an inspection of this Home on the 2nd December and found that there were 23 adult females and 13 children in residence. No change in building or grounds since my last visit. The building is not at all suited for its purpose, and too small for carrying on the work efficiently. The women are principally employed at laundry work.

Total . . . . .	<u>\$4,554 80</u>

## INSPECTIONS.

I made an inspection of this institution on the 24th April, when there were 241 inmates, viz., 133 adult females and 108 children. No deaths during the year. The women are employed in laundry work, tailoring, sewing, book-binding, weaving, housework and gardening.

All the rooms, beds, bedding, etc., were clean and orderly, and the books were found to be properly kept.

A second inspection of the Refuge was made by me on the 23rd September, when there were 246 inmates—126 women and 120 children. The women are classified according to their intelligence and crimes. They are employed at the usual occupations carried on in the institution. The children, from three to fourteen years of age, attend school daily and also take part in the housework. They are kept separate from the adult females.

There was no change in the premises since my last visit. All in good order.

## HOUSE OF PROVIDENCE, GUELPH.

## INSPECTIONS.

I made an inspection of the House of Providence, Guelph, on the 9th February. There were then in residence 61 old people, 33 males and 28 females. The dormitories, beds, bedding, etc. were clean and in good order, and the records were correctly entered up.

I instructed Mr Aikens to inspect this House. A copy of his report is annexed:

The House of Providence, Guelph, had the names of 56 old people on its register as inmates when I visited it on July 23rd. This institution, like others doing a similar work, varies little from year to year or from generation to generation. The ordinary type of inmate who is cared for here is not much subject to change. For the most part they have never had much of this world's goods, although some of them have striven for that end, and in their latter days, finding a place that they may live in after being incapacitated, they are simply content to live and let live. The term "House of Providence" seems aptly appropriate, when this homeless and unfortunate class are kept in mind. It seems fitting, too, that the personnel of such an institution should be those who have vowed to give their whole time and energies to this work. And for this reason it is invariably done well, done systematically and done sympathetically as I found to be the case at the Guelph institution.

## INSPECTIONS.

I made an inspection of this Home on the 12th August. There were then 18 inmates—11 men and 7 women. There was no change in the condition of the building or grounds since my last inspection. Everything pertaining thereto was in satisfactory order, and the books properly kept.

I inspected this Home on the 4th April. There were 19 old people (11 males and 8 females) receiving its benefits.

The institution was found to be in satisfactory order in all respects, and the books properly kept.

## INSPECTIONS.

I instructed Mr. Nicholson to make an inspection of this Home. A copy of his report is annexed:

I made an inspection of the House of Providence, Dundas, on the 2nd July. On that occasion there were fifty-three adult males, fifty-two adult females, and sixty boys in the Institution.

The House was in its usual excellent condition, and the grounds in well kept order. There is a fine vegetable and fruit garden in the rear which contributes largely to the table supplies of the Institution.

## INSPECTIONS.

I made an inspection of this Home on the 8th March. There were sixteen old people receiving the benefits of this charity on that day, eight males and eight females.

The rooms were all clean and well kept. The building is heated by hot water, and is supplied with city water. Indoor water closets and electric light are required. The books are properly kept.

I visited this Home on the 24th October. There were eleven old people in residence on that day, namely, six males and five females.

The old men attend to the garden and cut wood for the Home.

The building is heated by a hot water furnace, and lighted by coal oil lamps. I found all in good order.

## THE WIDOWS' HOME, BRANTFORD.

## INSPECTION.

I made an inspection of the Widows' Home, Brantford, on the 6th June. Twelve adult females were inmates on that date. The premises were in good order and the records properly kept.

I made another inspection of this Home on the 21st November. There were then eleven women in residence. There was no new feature to note in connection with this charity. It was in its usual condition of good order.

## INSPECTIONS.

I made an inspection of this Home on the 1st February. There were then eleven old people under charge, namely, six men and five women. All the rooms were clean and in good order, and the inmates comfortably provided for.

I made an inspection of this Home on the 22nd December, and found it in its usual state of good order. There was no change requiring comment since my last visit. There were nine inmates (five men and four women) on this date. No patients in the isolation ward.

## INSPECTIONS.

There were 19 inmates when I visited this Home on the 8th February, namely, 10 men, 7 women and 2 children. All the rooms, beds, bedding, etc., were clean and in good order. The books were properly entered up.

I instructed Mr. Nicholson to make an inspection of this Institution. A copy of his report is annexed.

I made an inspection of this Home on the 8th September, and found it in satisfactory order throughout. There were twenty inmates on that day, namely nine men, nine women and two children. The water supply is from a well and cistern, and the water-closets are in the yard. The building is lighted by electric light.

## INSPECTIONS.

I made an inspection of the House of Providence, Peterborough, on the 8th February, on which occasion there were 20 old people in residence, together with 6 children under twelve years of age. During the winter there were 14 admissions and 3 deaths.

The rooms, beds, bedding, etc., were in well kept order and the books correctly kept.

I instructed Mr. Nicholson to inspect this Institution. A copy of his report is annexed.

I inspected the House of Providence, Peterborough, on the 8th September. The building is not well suited for the purpose of a Home for old people, but I was informed that it is the intention of the authorities to enlarge and improve it. The number of persons cared for was twenty-eight, viz., five men, thirteen women and ten children. The latter are lodged in a separate dwelling which has been rented for the purpose, in order to keep them apart from the old people.

## INSPECTIONS.

I made an inspection of the Home for the Friendless, Windsor, on the 11th April, and found it in satisfactory order, all the rooms, beds, bedding, etc., being in a well kept state of cleanliness.

There were then 20 inmates, namely, eight males and twelve females. Books properly kept.

I made an inspection of this Home on the 21st October. Its inmates numbered 19, namely, 7 men, 9 women, and 3 children. There is accommodation for about 21 inmates.

The Home was in good condition throughout. Coal oil lamps are used for lighting.

## INSPECTIONS.

I made an inspection of this Home on the 31st January, and found it in good order throughout. There were four old people being cared for—two men and two women. The Home is managed by a committee of ladies. The books were properly entered up.

I instructed Mr. Nicholson to inspect this Home. A copy of his report is annexed.

I made an inspection of this Home on the 7th September, and found it in well kept order. Its inmates were five old people—two males and three females. A telephone in the building would be a convenience in cases of sickness.

## INSPECTIONS.

I made an inspection of this Home on the 9th February. There were 18 old people in residence on that day, namely, 6 males and 12 females. The rooms, beds, bedding, etc., were clean and in well kept order, and the inmates are made as comfortable as possible. The water supply is from a well, and coal oil is used for lighting. The Home is managed by a committee of ladies.

I instructed Mr. Nicholson to inspect this Home. A copy of his report is annexed:

I beg to report that I made an inspection of the Home for Aged, Lindsay, on the 9th September. There were 19 old people in residence on that day, namely, 8 males and 11 females.

Sometimes children are placed in the Home by the Children's Aid Society, but there were none on this occasion. The building was found to be in good order, and the books were entered up.

## ORPHAN ASYLUMS.

---

The following institution has been added to the list receiving Government aid during the past year :

### THE BERLIN ORPHANAGE, BERLIN.

The statistical tables on the following pages of this report show a considerable increase in the contributions to several of the institutions, while in some cases there is a slight falling off as compared with the past year.

The total number of children cared for in the Orphanages during the year was 4,145, as compared with 4,222 in 1898.

In the tables and my minutes of inspection will be found full details of the method of receiving and discharging children, the course of training they receive, their nationality, religion, etc., also the condition of the buildings and grounds.

The statistics relating to the sex, religious denominations and nationalities of the inmates are given in the following summary :

<i>Sex.</i>		
Male	.....	2,239
Female	.....	1,906
		— 4,145

<i>Religious Denominations.</i>		
Protestant	.....	2,190
Roman Catholic	.....	1,939
Other religions not given	.....	16
		— 4,145

<i>Nationalities.</i>		
Canadian	.....	3,541
English	.....	211
Irish	.....	226
Scotch	.....	54
United States	.....	66
Other countries and unknown	.....	47
		— 4,145

<i>Previous Residents.</i>		
Received from cities in which orphanages are located		3,291
Received from counties in which orphanages are located	..	356
Received from other counties in the province	.....	482
Emigrants and foreigners and unknown	.....	16
		— 4,145

The following tables show the aggregate stay of the inmates of the orphanages, the fixed allowances in respect thereof under the Charity Aid Act, the receipts of the institutions on maintenance account, the amount of the supplementary allowances, together with the total amount which will be recommended as the grant to be voted by the Legislature during the session of 1899, together with table showing the cost of maintaining the orphanages, and then comes the separate reports upon each home.

## SCHEDULE C.—Orphanages.

Names of Orphanages	Location.	Aggregate stay of inmates.	Fixed allowance of one and a half cents per day		Amount received from all sources other than Government.	Supplementary allowance of one quarter of such receipts, provided amount does not exceed the half-cent allowance.		Supplementary allowance of half-cent per day.		Total Government grant for the year 1898.

	— 592

The receipts of the Institution during the year, including the Government grant of \$2,113.20 were \$12,551.98 and the expenditures were \$12,538.84.

The collective stay of the inmates was 108,647 days, entitling the institution to receive the sum of \$2,172.94 as Government aid for the year 1898.

## INSPECTIONS.

I visited this Orphanage on the 18th November. There were then 274 children in residence, 142 boys and 132 girls, from three to fifteen years of age. They are taught housework, sewing and knitting. The boys are also employed in gardening. All of school age are taught in school daily. Five teachers are employed. There have been no deaths among the children in this Institution during the past year, although the deaths at the House of Providence (under the same management) show a death rate for children.

The building was found to be in good order. It is well lighted, heated and ventilated.

The receipts of this Institution during the year, including the Government grant of \$1,420.00, were \$8,510.47, and the expenditures were \$9,047.16.

The collective stay of the inmates was 69,534 days, entitling the Institution to receive the sum of \$1,390.68 as Government aid for the year 1898.

INSPECTIONS.

I instructed Mr. Nicholson to make an inspection of this Home. He reported as follows :

I made an inspection of this Home on the 19th October, when there were registered as inmates 127 boys and 84 girls—total, 211. The children were all in good health, and the work of the Institution appeared to be well conducted. The building was in its usual condition of good order, and the records were entered up.

## GIRLS' HOME, TORONTO.

Including the Government grant of \$686.66, the revenue of the Asylum during the year amounted to \$7,131.79, and the expenditure to \$6,742.89.

The collective stay of the inmates was 31,182 days, entitling the Asylum to receive a sum of \$623.64 as Government aid for 1898.

---

---

INSPECTIONS.

I instructed Mr. Nicholson to make an inspection of this Home. A copy of his report is annexed :

I visited the Girls' Home, Toronto, on the 4th August, and found the dormitories, school-rooms, play-rooms, lavatories, etc., scrupulously clean and orderly. There were 79 inmates on this date, all in good health. The register did not agree with the daily record as to the number discharged during the year, to which I called the Matron's attention.

I inspected the Home a second time on the 1st December. The names of 78 girls were on the register, all of whom I saw in the class-rooms and nursery. They were reported to be in good health, and presented a cleanly and neat appearance. The Matron, Mrs. Bright, who has been in charge of the Home for many years, is about to sever her connection with it owing to her failing health.

## BOYS' HOME, TORONTO.

The receipts of the Home during the year, including the Government grant of \$712.22, amounted to \$7,197.22, and the expenditures were \$5,515.24.

The collective stay of the Institution was equal to 33,550 days, entitling the Institution to receive the sum of \$671.00 as Government aid for the year 1898.

## INSPECTIONS.

I instructed Mr. Nicholson to make an inspection of this Home. A copy of his report is annexed :

I inspected the Boys' Home, Toronto, on the 30th of August. The register contained the names of 84 boys, as inmates of the Home, but several of them were absent visiting relatives and friends.

The building was in its usual condition of good order, and the records were properly kept.

I visited the Home again on the 2nd December, when there were 92 boys registered as inmates. Owing to three cases of diphtheria among them recently the school had been closed, but was about to be opened again. The sick ones were making good recovery, and the usual precautions were being taken to prevent a recurrence of the disease. The premises were in good order, and the books entered up.

### THE WORKING BOYS' HOME, TORONTO.

The following summaries show the operations of the Home during the year :

#### *Movement of Inmates.*

In residence, 1st October, 1897	.....	.....	32	
Admitted	.....	.....	96

City of Toronto	.....	.....	128	
			—	128

The receipts of the Home during the year, including the Government grant of \$245.12, amounted to \$3,642.41 and the expenditures were \$3,505.55.

The collective stay of the boys was equal to 11,318 days, entitling the Institution to receive the sum of \$226.36 as Government aid for the year 1898.

#### INSPECTIONS.

I made a visit of inspection to this Home on the 15th May, and found that the register contained the names of twenty-seven boys as residents. The books were well kept.

The boys are employed about the city and lodge and board in the Home, paying for same in proportion to the amount of wages they earn.

The dormitories, dining room, school-room, kitchen, wash and bath-rooms, and water closets were in good order.

I instructed Mr. Nicholson to make a second inspection of this Home. He reported as follows :

I made an inspection of the home on the 1st December, when there were the names of 35 boys on the register. Between 25 and 30 of them are in permanent situations in stores and factories, earning from \$1.25 to \$4.50 per week. They pay for their board according to their means.

Night school is held three nights a week, and a public school teacher is in charge. All the boys attend church once a day on Sunday, and Sunday school is held in the Home.

An effort is being made to provide more commodious quarters for the Home at an early day.

---

THE INFANTS' HOME AND INFIRMARY, TORONTO.

The following summaries show the operations of this Home during the past year:

*Movements of Inmates.*

---

The receipts of the Home during the year were \$5,389.09, and the expenditures were \$5,261.42.

The collective stay of the children equalled 24,740 days. The Home will be entitled in respect of them to \$494.80.

The collective stay of the mother nurses, for whom ten cents a day is allowed, was 9,479 days. The Home will therefore be entitled to \$947.90.

The collective days' stay of the other women, for whom seven cents per day is allowed, was 1,982 days, for which the sum of \$138.74 will be allowed.

The total grant, therefore, to the Home for 1898, including the grant of \$200 for the Infirmary work, will amount to \$1,781.44.

#### INSPECTIONS.

I made an inspection of this Home on the 17th November, and found 49 adult females and 82 infants in residence. Thirty-five of the women have children in the Home. All the rooms, dormitories, etc., were in good order. No sickness among the inmates. Books properly kept.

---

## ST. NICHOLAS' HOME, TORONTO.

	—	119

The revenue of the Home during the year, including the Government grant of \$418.66, was \$4,373.98, and the expenditure was \$4,355.48.

The collective stay of the boys was 19,504 days, entitling the Institution to receive the sum of \$390.08 as Government aid for 1898.

---

---

INSPECTIONS.

I instructed Mr. Nicholson to make an inspection of this Home. A copy of his report is annexed :

I made an inspection of the St. Nicholas' Home, Toronto, on the 12th July. On that day there were the names of 52 youths registered as inmates, nine of whom were under twelve years of age. The majority of them are in situations about the city. I found the Home in good order, the dormitories neat and clean, and the books entered up.

I instructed Mr. Nicholson to make an inspection of this Home. A copy of his report is annexed :

I visited this Home on the 2nd December, and found it in its usual condition of good order. Some new iron bedsteads have been placed in the dormitories, and the rooms formerly used by the Children's Aid Society have been thoroughly renovated, painted, and refurnished. The register showed the number of boys in residence to be 56, ranging in age from seven to seventeen years. Nearly all of them were said to be employed about the city. The younger boys attend school during the day, and for the older ones a night school is provided during the winter.

---

THE RESCUE HOME FOR WOMEN, TORONTO.

The revenue of the Home during the year amounted to \$1,112.29, and the expenditure to \$1,278.13.

The collective stay of the inmates was equal to 3,352 days, thus entitling the Institution to receive the sum of \$67.04 as Government aid for 1898.

INSPECTIONS.

I instructed Mr. Nicholson to make an inspection of this Home. His report is annexed.

I made an inspection of this Home on the 19th October. This charity has removed from Parkdale and now occupies a building at 916 Yonge Street, formerly used by the Salvation Army as a barracks.

There is accommodation for 18 or 20 adults. The building is heated by two hot air furnaces, lighted by gas and supplied with city water.

The inmates on this occasion were 10 adult females and 5 infants. The daily record had not been entered up since August.

## SALVATION ARMY, CHILDREN'S SHELTER, TORONTO.

The following summaries show the operations of this Home during the year :

*Movements of Inmates.*

In residence, 1st October, 1897. ....	21	
Admitted .....	32

The Revenue of the Shelter during the year amounted to \$610.40 and the expenditure to \$606.96.

The collective stay of the inmates was 6,758 days, entitling the Shelter to receive a sum of \$135.16 as Government aid for 1898.

---

---

INSPECTIONS.

I instructed Mr. Nicholson to make an Inspection of this Institution. A copy of his report is annexed :

This Institution was inspected by me on the 3rd August, when there were fifteen children being cared for by the matron and three assistants. The accommodation is somewhat limited, and the building (formerly a tenement house) is not well suited for its present purpose.

There were 20 children in the Shelter when I visited it on the 1st December. They were being cared for by four women, members of the Salvation Army.

The children's ages ranged from fourteen months to twelve years. Four of the eldest were attending school. The premises were in fairly well kept order, but the dormitories appeared to be somewhat crowded with cots.

## ST. MARY'S ORPHAN ASYLUM, HAMILTON.

The following summaries show the operations of this asylum during the year :

*Movements of Inmates.*

	—	168

Including the government grant of \$964.06, the revenue of the Asylum during the year amounted to \$7,905.27, and the expenditure to \$7,904.86.

The collective stay of the inmates was 38 779 days, entitling the Asylum to receive a sum of \$775.58 as government aid for 1898.

## INSPECTIONS.

I made an inspection of the St Mary's Orphan Asylum, Hamilton, on the 5th February.

There were no change to note in the building or grounds since my last inspection. All departments were clean and in good order. There were 49 girls in residence, who ages ranged from two to twelve years. They attend school, do housework, knitting, etc. The books are well kept.

I instructed Mr. Nicholson to make a second inspection of this orphanage. A copy of his report is annexed :

I inspected the St. Mary's Orphan Asylum, Hamilton, on the 2nd July. There were fifty children being cared for, ranging from two to twelve years of age, and all were reported to be in good health.

Their play-room, school-room, dormitories, etc., were in well kept order, and the books were entered up.

The receipts of the Asylum during the year were \$4,398.74, and the expenditures were \$4,053.87. The receipts and expenditures of the Aged Women's Refuge are included in these amounts.

The collective stay of the children was 2,636 days, entitling the Institution to receive the sum of \$52.72 as government aid for 1898.

INSPECTIONS.

I made an inspection of this Orphanage on the 4th February. There were then eight children being cared for, namely, six boys and two girls, whose ages were from seven to fourteen years.

They attend school daily and also do some work about the house and in the garden. The dormitories, beds, etc., were in good order.

I instructed Mr. Nicholson to make an inspection of this Orphanage. A copy of his report is annexed :

I visited this Orphanage on the 2nd July. There were only seven children (five boys and two girls) in residence on that day.

Their dormitories, play-room, etc., were clean and in neat order. The books were entered up.

## BOYS' HOME, HAMILTON.

The receipts of the Home during the year were \$4,679.13, and the expenditures were \$4,649.09.

The collective stay of the inmates was 24,215 days, entitling the Home to receive the sum of \$484.30 as Government aid for 1898.

## INSPECTIONS. \*

I made an inspection of the Boys' Home, Hamilton, on the 4th February. There were on that day 66 boys in residence, from five to fourteen years of age. They attend school daily. Religious services are held on Friday afternoon and on Sunday in the school room. Those of the boys who are able also go to church in the city. The Home was in a good state of cleanliness and order throughout.

I instructed Mr. Nicholson to make a second inspection of this Home. A copy of his report is annexed :

I visited this Institution on the 2nd July and found all its apartments clean and tidy. The register contained the names of 67 boys as inmates: one had been taken to the hospital on account of illness. Since the 1st October 15 had been admitted and 13 discharged. The books were properly entered up to date.

## GIRLS' HOME, HAMILTON.

The following summaries show the operations of this Home during the year:

*Movements of Inmates.*

The revenue of the Home during the year was \$1,953.65 and the expenditure was \$1,863.56.

The collective stay of the children was 12,810 days, entitling the Home to receive a sum of \$256.20 as Government aid for 1898.

## INSPECTIONS.

I made an inspection of the Girls' Home, Hamilton, on the 5th February. There were on that occasion 37 girls in the Institution, from four to thirteen years of age. There is a school building on the premises, convenient to the Home, where the girls are taught daily. They are also instructed in sewing and knitting. Homes are found for them from time to time.

There was no change in the Institution or grounds since my last visit. Everything pertaining thereto was in well kept order; and the records were properly entered up.

I instructed Mr. Nicholson to make a second inspection of this Home. A copy of his report is annexed :

I made a visit of inspection to the Girls' Home, Hamilton, on 2nd July, and found the house in good order throughout. There were 33 girls registered as inmates, five of whom were in the city Hospital being treated for ringworm. The others were all in good health.

*Places Admitted From.*

City of Hamilton . . . . .	89	
County of Wentworth . . . . .	6	
Other places and counties . . . . .	15	
Other countries . . . . .	—	110

The revenue of the Home including the Government grant of \$386.96 was \$2,618.48, and the expenditure \$2,613.92.

The collective stay of the children equalled 9,387 days. The Home, therefore will be entitled in respect of them to \$187.74.

The collective stay of mother nurses for whom ten cents a day is allowed, was 1,064 days. The Home in respect of these will be entitled to \$106.40.

The collective stay of other women, for whom seven cents a day is allowed, was 1,263 days, which entitles them to \$88.41.

The total grant to the Home will amount to \$382.55.

## INSPECTIONS.

I made an inspection of this Home on the 5th February, and found that considerable improvement had been made in the building since my last visit. There were 5 adult females and 31 infants in residence on this occasion. The children are adopted in some cases, and in others they are sent to the Boys' and Girls' Homes when old enough. The books are well kept.

I instructed Mr. Nicholson to make a second inspection of this Home. A copy of his report is annexed:

I made an inspection of the Home for the Friendless, Hamilton, on the 2nd July. There were in residence on that day, 7 adult females and 24 children, making a total of 31. They were all reported to be in good health.

The Home was found to be in the best of order in every part. A large verandah has been erected on the west side of the building, making an excellent airing place for the children.

SALVATION ARMY RESCUE HOME, HAMILTON.

The following summaries show the operations of this Asylum during the year:

*Movements of Inmates.*

In residence 1st October, 1897 .....	13	
Admitted .....	184

	—	71

The Revenue of the Home during the year was \$3,480.68, including the Government grant of \$3,557.34, and the expenditure was \$3,547.34.

The collective stay of the children was 18,688 days, entitling the Institution to receive a sum of \$373.76 as Government aid for 1898.

## INSPECTIONS.

The Orphans' Home, Kingston was inspected by me on the 21st April. There were in residence on that day fifty-two children, from three to twelve years of age. Their dormitories, dining room, bath and wash rooms, kitchen, laundry, and water closets were in good condition. The books were properly kept.

I inspected this Home on the 15th December and found no change in the building or premises since my last visit. There were fifty-seven children being cared for from three to twelve years of age, viz., twenty-six boys and thirty-one girls. They were following the usual routine of attending day school and doing housework, sewing, etc. The books were properly entered up.

## ORPHANAGE OF THE HOUSE OF PROVIDENCE, KINGSTON.

The receipts and expenditures of the Orphanage are included with those of the House of Providence, and cannot be shown separately.

The collective stay of the children was 28,874 days, entitling the Orphanage to receive the sum of \$577.48 as Government aid for 1898.

## INSPECTIONS.

I visited this Orphanage on the 21st April. The register contained the names of sixty-two children—thirty-six boys and twenty-six girls, from two to twelve years of age. They attend school daily, and are also instructed in sewing, knitting and house-work. Homes are found for them, or they are placed at trades as opportunities offer.

The dormitories, wash and bath rooms, water closets, etc., were in a clean and orderly condition and the records were well kept.

I inspected this Orphanage again on the 15th December. There were sixty-nine children from two to twelve years of age in residence, namely, forty-one boys and twenty-eight girls.

The larger children attend the city schools; the others are taught in the institution. The school rooms, dining rooms, play rooms and dormitories are on the ground floor under the new chapel. All in good order.

---

## HOTEL DIEU ORPHAN ASYLUM, KINGSTON.

The following summaries show the operations of this Asylum during the year :

*Movements of Inmates.*

In residence, 1st October, 1897 .....	29	
Admitted .....	91

The income of the Asylum during the year amounted to \$1,229.32, and the expenditure to \$1,209.00.

The collective stay of the inmates was equal to 13,466 days, thus entitling the Institution to receive the sum of \$269.32, as Government aid for 1898.

## INSPECTIONS.

I inspected this Orphanage on the 21st April. There were thirty female children being cared for on that day, ranging from two to twelve years of age. They attend school in the building, and are also instructed in house work. The rooms, dormitories, beds, bedding, etc., were in good order, and the records were well kept.

When I visited this Orphanage on the 15th December there were 34 children 3 boys and 31 girls, registered as inmates. They are domiciled on the first floor of the new building used as a chapel, where they have school-rooms, dining-room, play-room, sitting-rooms, dormitories, wash-rooms and water-closets. All their rooms were in good order. They are instructed in sewing and doing general house work.

The revenue of the Home was \$5,899.57, and the expenditures were \$4,821.33.

The collective stay of the children was equal to 19,686 days, thus entitling the Institution to receive the sum of \$393.72 as Government aid for 1898.

## INSPECTIONS.

I visited the Orphans' Home, Ottawa, on the 24th March. On that day there were 53 children (from three to twelve years of age) being cared for, namely, 28 boys and 25 girls. All the different departments were clean and in good order. Homes are found for the children from time to time.

I visited this Home again on the 22nd September. Its inmates on that day were 33 boys and 25 girls, from two to thirteen years of age. They attend school daily besides being trained in house work, sewing, etc. I found no change in the building or grounds since my last inspection. The premises were in good order in every respect.

---

## ST. PATRICK'S ORPHAN ASYLUM, OTTAWA.

The receipts and expenditures of this Institution are included in the financial statements of the Refuge Department *vide* Schedule B. Refuge Report.

The collective stay of the children was equal to 23,154 days, entitling the Institution to receive the sum of 463.08 as Government aid for 1898.

## INSPECTIONS.

I made an inspection of the Orphanage on the 24th March.

There were 66 children in charge, 32 boys and 34 girls, from three to twelve years of age.

They are taught daily in the class rooms by two teachers. Part of their time is devoted to housework, sewing, knitting, etc., and homes are found for them from time to time.

The building and premises have been considerably improved since my last inspection.

I made a second inspection of this Orphanage on the 3rd December. There was nothing new to note in regard to the buildings or grounds. All was in very good order. There were 58 children (31 boys and 27 girls) being cared for, and their time is occupied with school studies, housework, sewing etc. Homes are found for them as occasion requires.

## ST. JOSEPH'S ORPHAN ASYLUM, OTTAWA.

The following summaries show the operations of this Charity during the year:

*Movements of Patients.*

The receipts of the Institution were \$5,973.68, and the expenditures \$5,813.83.

The collective stay of children was 54,166 days, entitling the Asylum to receive the sum of \$1,083.32 as the Government aid for 1898.

## INSPECTIONS.

I made an inspection of the St. Joseph's Orphanage, Ottawa, on the 25th April. The register shewed that 153 children (65 boys and 88 girls) were being maintained.

They were all in good health and apparently happy,

The management expect soon to remove to their new building on the hill, near Government House.

I visited this Orphanage on the 3rd December. The new building lately erected is now occupied. It is a large four-storey stone structure with basement, and is situated near the Infants' Home. It has a frontage of 200 feet by a depth of 100 feet, and has accommodation for 250 children.

There is an entrance to the first flat at each end of the building. The north end is occupied by the boys and contains two play rooms, dining-room, clothes room, sewing room, hall, wash-room, bath-room and water-closets. The girls occupy the south end, where there is a dining-room, workroom, play-room, wash-room, bath-room, and water-closets.

In the basement are the furnace and boiler-room, coal-rooms, vegetable cellar, wash-room, ironing room, and play-room for boys' use in bad weather.

Second flat.—Hallway and main entrance from the street, school-room, sewing and mending rooms, bath-room and water-closets, hall leading to rear of building, also large play-rooms, reception rooms, and sisters' private room. There are private parlors on both sides of the hall, a dispensary, linen cupboard, private dining-room, and stairs leading to the next or third flat.

Third flat.—School-rooms for the larger pupils, sisters' private rooms, hospital or infirmary, several large rooms arranged for chapel, music room, dormitories, bath and wash-rooms, water-closets, linen closet, work or sewing-rooms, door leading from hall on to gallery outside, also stairs leading to fourth flat.

Fourth flat.—On this flat there are a number of dormitories, sisters' and nurses' rooms on night duty, linen closets, wash-rooms, bath-rooms and water-closets, hall leading out on to gallery. The attic is partitioned off and used for storage rooms, trunk rooms, etc.

All the rooms in the building are well furnished with modern furniture.

There are fire escapes at each end of the building. Electric light has been installed, and the water supply is from the city mains.

At the time of my visit there were 148 children in residence, namely, 70 boys and 78 girls, from two to fourteen years of age. They attend school, and do housework, sewing, knitting, mending, etc. Homes are found for them from time to time, principally among the farmers of the surrounding country. The children were free from sickness. The books were properly kept.

## THE RESCUE HOME AND CHILDREN'S SHELTER, OTTAWA.

The following summaries show the operations of this Home during the year.

*Movements of Inmates.*

In residence, 1st October, 1897	27

The revenue of the Home was \$1,387.77, and the expenditures were \$1,501.35.

The collective stay of the inmates was equal to 11,100 days, thus entitling the Institution to receive the sum of \$222.00 as Government aid for 1898.

## INSPECTIONS.

When I inspected this Home, on the 25th of March, there were 16 adult females and 26 children in residence.

A number of the inmates were sick with measles.

The building was in good condition, having been improved considerably during the past year. The rooms also were clean. Books well kept.

I made an inspection of the Salvation Army Rescue Home, Ottawa, on the 2nd December, and found that it had been considerably improved, both the building and grounds, since my last visit.

There were 14 adult females, and 14 children in residence.

Everything was in satisfactory order.

---

INFANTS' HOME, OTTAWA.

			— 266

The revenue of the Home during the year, including the Government grant of \$196.90 was \$2,075.03, and the expenditure was \$2,091.99.

The collective stay of the infants was 12,334 days, entitling the Institution to receive the sum of \$246.68 as Government aid for 1898.

## INSPECTIONS.

I made an inspection of the Infants' Home, Ottawa, on the 25th April, finding 56 infants and 4 mother nurses in residence.

Received since the 1st October, 160: discharged, placed with friends or parents, 73: died 53.

The building was undergoing renovation, kalsomining etc.

It is heated with steam, supplied with city water, and lighted with coal oil lamps. It is fitted with bath-rooms and water-closets.

Books properly kept.

I visited this Home again on the 3rd December. No change in the building since my last visit, but the grounds showed considerable improvement.

There were thirty infants being cared for, and they are kept as comfortable as possible, but owing to their tender ages the death rate is large. Since the 1st October last thirty were received and seventeen died.

## ROMAN CATHOLIC ORPHAN'S HOME, LONDON.

The receipts and expenditures of this Home during the year amounted to \$14,760.97 and \$14,829.90, and are included with those of the House of Refuge.

The collective stay of these children was 33,706 days, entitling the Asylum to receive the sum of \$674.12 as Government aid for 1898.

---

---

INSPECTIONS.

This Orphanage was inspected by me on the 6th April. There was no change in the building or grounds since my last inspection, calling for special remark. All departments were in satisfactory order. There were ninety-three children under charge (sixty-one boys and thirty-two girls) from three to twelve years of age, all of whom appeared to be comfortably provided for.

I visited this Orphanage again on the 25th November. On that day seventy-two children, from three to twelve years of age, were being cared for. Forty-five were boys and twenty-seven were girls. In addition to attending school daily, they are taught housework, sewing, knitting, etc.

Their dormitories, school-rooms, play-rooms, etc., were in well kept order.

PROTESTANT ORPHANS' HOME, LONDON.

The following summaries show the operations of this Orphanage during the year:

*Movements of Inmates.*

In residence, 1st October, 1897 .....	26	
Admitted .. .. .	46	
Total number of inmates .....	72	72

	72	72

The revenue of the Home was \$3,522.84 and the expenditures were \$3,520.08.

The collective stay of the children was equal to 12,866 days entitling the Institution to receive the sum of \$257.32 as Government Aid for 1898.

INSPECTIONS.

I visited the Protestant Orphans' Home, London, on the 6th April. All parts of the building were in good order, also the school rooms, in a separate building. The inmates numbered 35—25 boys and 10 girls—from three to twelve years of age. The books were properly kept.

I visited this orphanage again on the 24th November and found 45 children in residence, namely, 30 boys and 15 girls. In addition to attending school they are taught housework, sewing, knitting, etc.

All departments were clean and in good order, and the books properly kept.

## WOMEN'S REFUGE AND INFANTS' HOME LONDON.

The following summaries show the operations of this Charity during the year :

*Movements of Inmates.*

In residence, 1st October, 1897 .....	15	
Admitted .....	44	
Total number of inmates .....	—	59
Discharged .....	32	
Died .....	8	
In residence, 30th September, 1898... ..	19	59

County of Middlesex .. ..	2	
Other counties .. ..	....	59

The receipts during the year, including the Government grant of \$266.34, were \$677 88, and the expenditure \$1,077.53.

The collective stay of the children equalled 3.173 days. The Home will, therefore, be entitled in respect of them to \$63.46.

The collective stay of mother nurses, for whom ten cents per day is allowed, was 934 days. The Home, in respect of these, will be entitled to \$93.40.

The collective days' stay of those mothers for whom seven cents per day is allowed, was 934 days, for which they are entitled to receive \$65.38.

The total grant to the Home, therefore, for 1898, will amount to \$222.24.

## INSPECTIONS.

I visited this Charity on the 5th April when there were three women and six children in residence.

The record was found to be correctly entered up, and the rooms were in well kept order.

I inspected this Home on the 25th November. There were seven adult females and eleven children in residence on that day. The premises were in good order.

A larger building, with more modern appliances, is much needed.

THE RESCUE HOME FOR WOMEN, LONDON.

The following summaries show the operations of this Asylum during the year :

*Movements of Inmates.*

In residence 1st October, 1897 .....	22	
Admitted .....	107

The revenue of the Asylum was \$1,355.89, and the expenditures \$1,406.71.

The collective stay of the children was 8,000 days, entitling the Asylum to receive the sum of \$160.00, as Government aid for 1898.

---

---

INSPECTIONS.

I visited this Home on the 5th April, and found house-cleaning in progress and repairs being made. There were eleven adult females and twelve infants in the house. Some of the women work in the city and pay for their board and the care of their infants, about \$4 per month. A night school has been established. The Home was in good order throughout and the books properly kept.

I made a second inspection of this Home, on the 25th November, when its inmates were 13 adult females and 12 children. The cellar has been repaired and a brick floor laid in it. The drainage is now in good order.

PROTESTANT HOME (ORPHANAGE BRANCH), ST. CATHARINES.

The following summaries show the operations of this Charity during the year :

*Movements of Inmates.*

In residence, 1st October, 1897	21
Admitted	22
Total number of inmates	—43

	—43

The revenue and expenditure of the Home during the year amounted to \$3,070.27 and \$1,630.44 respectively.

The collective stay of infants to 8,645 days at two cents entitle the Home to \$172.90 for 1898.

INSPECTIONS.

An inspection of this Home was made by me on the 30th March. There were 22 children in it then, whose ages ranged from eighteen months to fourteen years. All the rooms, beds, bedding, etc., were in satisfactory order. There was no change to note in the condition of the building and grounds since my last visit. Books properly kept.

## ST. AGATHA ORPHAN ASYLUM, ST. AGATHA.

The following summaries show the operations of this Asylum during the year :

*Movements of Inmates.*

In residence, 1st October, 1897	50

The revenue of the Asylum was \$1,897.85, including the Government grant of \$375.16, and the expenditure to \$1,893.75.

The collective stay of the children was 18,746 days, entitling the Asylum to receive the sum of \$374.92 as Government aid for 1898.

## INSPECTIONS.

I requested Mr. Aikens to inspect this Institution. A copy of his report is annexed.

On July 25th, I inspected the Orphanage at St. Agatha. The daily record gave the names of 55 children in attendance, about equally divided. It being the vacation period the children do not attend school the entire day, but only half time. On speaking with the Sisters in charge why they do not give them a total freedom from books and studies, I was informed that the most of them have no homes, no relatives or others who care anything about them, and being compelled to spend their time at the institution, they are better at work doing something, than spending the day in play. Of course they assist in the cultivation of the 14 acres of land attached to the building as far as children from 2 or 3 to 10 or 12 years old can, but otherwise most of their life at this orphanage is devoted to a preparation for earning their own living when they leave.

The building is kept scrupulously neat and clean, and the work done is thoroughly methodical, all of which is an object lesson to a young and plastic mind.

The daily record book and register are kept regularly entered up.

## ORPHANS' HOME, FORT WILLIAM.

The following summaries show the operations of this Charity during the year :

*Movements of Inmates.*

In residence, 1st October, 1897	.....	.....	18

The revenue of the Home was \$1,587.05, and the expenditure 1,604.16.

The collective stay of the children was 7,196 days, entitling the Home to receive the sum of \$143.92 as Government aid for 1898.

## INSPECTIONS.

I visited this Orphanage on the 9th September. Formerly white children were received and cared for; now none but Indian and Halfbreed children are admitted. There were eighteen inmates on the date of this visit, namely, four boys and seven girls, under twelve years of age, and seven adults.

I found the building in good order. It is heated with hot air, and water tanks and force pumps are provided as a protection from fire. There is a separate school building on the grounds, convenient to the Home, and two teachers are employed. The children remain in the Home until they are fitted for going out to service in private families or to learn trades.

The books are properly entered up. Two deaths occurred during the year

## BERLIN ORPHANAGE, BERLIN.

The following summaries show the operations of this Orphanage during the year:

*Movements of Inmates.*

			—	39

The revenue of the Home was \$1,210.81, and the expenditures were \$1,160.25.

The collective stay of the children was equal to 9,198 days, entitling the Institution to receive the sum of \$183.96 as Government aid for 1898.

## INSPECTIONS.

I made an inspection of the Berlin Orphanage on the 10th February.

The register contained the names of fifteen children, from three to thirteen years of age, namely, nine boys and six girls. Thirteen of them attend school in the town. Homes are found for them from time to time.

All the rooms, dormitories, beddings, etc., presented a clean and tidy appearance, and the books were properly entered up.

I instructed Mr. Aikens to inspect this Institution. A copy of his report is annexed :

This Institution is a non-denomination Orphanage, managed by a United Brethren clergyman and his wife. It is fairly well adapted for the purposes of an Orphanage, and its location between two towns gives it special facilities for caring for the children of both. It can accommodate twenty-four, although but half that number was in residence on the day of my visit. It is equipped with twenty beds, a play room in the basement, dining rooms, and study rooms for the children, whose ages run from about four to thirteen.

The work has been carried on for several years already in a smaller building, but as it increased from year to year it was found necessary to move into their present premises, between Berlin and Waterloo. The whole Institution indicates frugality and thrift, so characteristic of Germans generally.

No effort had been made to keep the books prescribed by the Department, but the movements of population were recorded in a book of their own. I gave the Rev. Mr. Stolz and his wife some information about making entries in the daily record book, and told them to start it on the 1st of October, which I have no doubt will be done.

## MAGDALEN ASYLUMS.

—

There has been no increase in these Homes during the year. In my reports of inspection will be found particulars regarding each institution, and the tables show the length of stay of the inmates, amount of receipts and expenditures, etc.

The revenue of the Asylum, exclusive of the Government grant of \$207.04, amounted to \$3,055.13, and the expenditures to \$3,165.04.

The collective stay of the inmates was 10,877 days, entitling the Institution to receive the sum of \$217.54 as Government aid for 1898.

## INSPECTIONS.

I made an inspection of the Industrial Refuge, Toronto, on the 17th November. There were thirty adult females registered as inmates on that day. They are expected to remain in the Refuge for a year and are clothed and fed. No wages are paid to them, except a small amount in deserving cases. They are placed in situations when suitable places can be found for them. All departments were in a good state of cleanliness and order. Books well kept.

## GOOD SHEPHERD FEMALE REFUGE, TORONTO.

The income of this Charity, exclusive of the Government grant of \$602.88, was \$5,012.00, and the expenditure \$5,605.88.

The collective stay of the inmates was 31,139 days, entitling the Institution to receive the sum of \$622.78 as Government aid for 1898.

## INSPECTIONS.

I visited this Institution again on the 17th November. The inmates on that day numbered 92, namely, 72 adult females and 30 children.

The children are kept separate from the other inmates, and they attend school daily. All departments were in a good state of cleanliness and order.

The new building is nearly complete and will afford accommodation for between two and three hundred more inmates.

TWENTY-NINTH ANNUAL REPORT  
OF THE  
INSPECTOR OF PRISONS AND PUBLIC CHARITIES  
UPON THE  
HOSPITALS  
OF THE  
PROVINCE OF ONTARIO.

BEING FOR THE YEAR ENDING 30TH SEPTEMBER,

## HOSPITALS.

---

The work done by the Hospitals in Ontario during the past year surpasses all previous years in their history, the number of patients treated having been 21,828, or an increase of 2,211 over any previous year, while the death rate has greatly decreased, there being 1,129, or about five per cent of the cases treated. This is the lowest death rate yet reached in the Province. It is not surprising that the public have unbounded confidence in committing their sick to the care of our Hospitals, and that they contribute most liberally of their private means to the maintenance of the institutions.

While the number of patients has greatly increased there has also been a corresponding increase in the number of hospital buildings, well equipped, and having the best medical and surgical talent in attendance that is available in their respective localities.

The management supply nurses who have been thoroughly trained in all the departments of caring for the sick, and well qualified superintendents to look after all the details in connection with the work.

The number of Hospitals now in operation in the Province is forty-eight. Five new Hospitals were erected and placed on the list for Government aid last year, viz.:—

Royal Victoria Hospital, Barrie.

Hotel Dieu Hospital, Cornwall.

General Hospital, Rat Portage.

Sanatorium for Consumptives, Gravenhurst.

St. Joseph's Hospital, Sudbury.

And this year there are three Hospitals making application to be placed upon the list, viz.:—

St. Luke's Hospital, Ottawa.

General Hospital, Cornwall.

Orthopedic Hospital, Toronto.

Hospitals are now pretty fairly established in all the cities and towns of the Province.

The very liberal aid given by the Legislature for many years has stimulated the people to provide these institutions, and also to contribute generously of their private means toward their support.

The supervision of the Government by semi-annual inspections has done much to place the Hospitals upon a permanent basis, and they are now well furnished with modern appliances for the comfort and care of the sick.

It is to be regretted, however, that there is a tendency in many small places and even in some cities, to establish more Hospitals than the requirements of the population demand, thereby dividing the work to such an extent as to cripple the efforts put forth for their proper maintenance.

One good, well equipped Hospital, sufficiently large to accommodate the sick of its locality can do more and better work than two or more small Hospitals, as, where duplicated in this way, the tendency is to divide the community in its philanthropic work and cause a waste of money in keeping up an extra building, staff of officers, etc. Government aid should not be given to encourage the opening of a new Hospital where sufficient accommodation already exists. The grant was formerly thirty cents per patient per day, but this has been changed to a yearly grant of \$110,000, which is divided between the various Hospitals according to the work done by each. How long the Legislature will continue to grant this aid it is difficult to say, but it is natural to suppose that as these institutions become more nearly self-sustaining by the fees, private contributions, subscriptions and municipal grants they receive, the Government grant will be lessened. Consequently, great care should be exercised in establishing new Hospitals on the assumption that they will always continue to receive Government aid, as in the event of its withdrawal at any time they might be placed in embarrassed circumstances, and to a great extent rendered useless.

All the Hospitals in the Province receiving Government aid are required to admit all who apply and who are proper subjects for hospital treatment, without regard to nationality, religion or their ability to pay.

The friends or families of patients are permitted to visit them at suitable times and supply them with such delicacies as may be desired and that are not injurious to the patient, or are against the rules of the institution. Clergymen have access at all times to the sick desiring their services.

The following statement shows the number of patients treated in the several Hospitals during the past twenty-one years.

Tables VI. and VII. show the manner in which the Government grant is distributed.

In tables VIII. and IX. will be found details of cost of maintaining each Hospital, daily cost of patients, etc.

The inspections of Hospital during the year show the number of patients in residence, condition of buildings and grounds, etc., etc.

The Tables numbered I. to X. will be found in the following pages, and following them are the separate reports upon each of the hospitals, which give full information as to the movements of patients, the sanitary and other conditions of the respective institutions.

The following comparative statement shows the numbers treated in all the hospitals in each of the past twenty-one years, with the increase or decrease in each successive year as the case may be:—

		Increase.	Decrease.
1878.....	4,372	295	..

## INSPECTIONS.

I made an inspection of the General Hospital, Toronto, on the 10th March. There were 267 patients on that day, namely, 153 males and 114 females, distributed as follows: 211 in the general wards; 11 in the Burnside Lying-in department; 23 in the Pavilion for females, and 22 in the Eye and Ear department.

During the past year 1,129 patients were admitted, and 1,119 discharged. During the same period there were 46 births and 65 deaths.

There were also 6,040 cases of treatment of outdoor patients during the past year.

All the private rooms and public wards were clean and orderly; also the operating room, dispensing room, sitting and dining rooms, kitchen, cellars, food supplies, etc.

The buildings are well lighted and heated, and provided with good fire protection. The management under Dr. O'Reilly is very efficient. The books are properly kept.

I made a second inspection of this Hospital on the 29th December. On that day there were under treatment in the general wards 162 male and 115 female patients. Admissions since the 1st of October 209; deaths 51.

In the Pavilion for females there were 16 patients; in the Burnside Maternity building there were 11 females and 2 infants, and in the Eye and Ear department there were 30 patients.

All the departments were in excellent order. A number of improvements have been made in the main building since my last inspection.

INSPECTIONS.

I inspected this hospital on the 15th August. There were then 55 patients under treatment, namely, 15 men, 33 women and 7 children. The number admitted since the 1st October was 580, and the deaths for the same period 29.

The public wards private rooms, operating room, dispensary, sitting room, kitchen, laundry, cellar, nurses' and servants' apartments, bath-rooms and water closets were all clean and orderly.

The books were entered up carefully

I made an inspection of this hospital on the 27th December. Sixty-six patients (17 men, 44 women and 5 infants) were under treatment on that day. Since the 1st October 176 admissions and 3 deaths.

I found all departments in excellent order, and the books written up to date.

INSPECTIONS.

I visited the Lakeside Branch of the Hospital on the 15th July.

Its inmates numbered 81 children—46 boys and 35 girls.

The building has been very much improved, the verandahs have been enlarged, and the grounds were looking well. All the wards, officers' apartments, bath-rooms, wash-rooms, and water-closets were clean and in good order. The institution is well supplied with nurses and medical attendance.

There has not been a death among the children since they were taken to the Island.

The books were properly entered up.

The Hospital had 77 patients (50 boys and 27 girls) when I inspected it on the 27th December.

The admissions since the 1st October were 117; and the deaths 5.

Quite an improvement has been made on the arrangement for the reception of out-door cases, and the isolation of cases of a more or less contagious character.

All the departments of the Hospital were in the best of order. It is the best institution in the Province for modern hospital work.

## ST. MICHAEL'S HOSPITAL, TORONTO.

## INSPECTIONS.

I made an inspection of this Hospital on the 27th July. There were 117 patients in residence—60 males and 57 females. The number admitted since the 1st October was 1250, and the number of deaths for same period was 83.

The private rooms and public wards, dispensary, sitting room, dining rooms, kitchen, laundry, wash and bath rooms, water closets, etc., were all clean and in good condition. Good light, ventilation and drainage.

The nurses occupy rooms in the building adjoining, convenient to the Hospital. The books were found to be properly kept.

I made a second inspection of this Hospital on the 27th December. The patients on that day numbered 141—79 males and 62 females.

Admitted since the 1st October, 442; died, 29.

I found the Hospital in good order in every part, namely: public wards, private rooms, operating room, dining and sitting rooms, wash and bath rooms, water closets, cellar, and laundry. There is an efficient staff in charge.

INSPECTIONS.

I made an inspection of this Hospital on the 15th August. On that day there were twenty patients in residence—four men, fifteen women and one child.

Owing to the books not being properly kept, it was impossible to tell the number of patients received in the Hospital since the 1st October.

Neither the register nor the daily record had been written up for some time past. I called the attention of the doctor in charge to the necessity of keeping the books in proper order. The building was in a good state of order and cleanliness.

I made an inspection of this Hospital on the 30th December, and found it in satisfactory order throughout. There were eighteen patients under treatment, namely, seven males and eleven females. The accommodation is limited to thirty-two beds. The house staff consists of the lady superintendent, the resident doctor and eleven nurses in training. The Hospital appears to be doing good work, considering the poor facilities afforded by the building now occupied.

No fire escape is provided, but pails of water are kept in readiness on each floor to extinguish a fire in its incipient stage. The nurses' quarters are on the opposite side of the street.

## INSPECTIONS.

I made an inspection of the City Hospital, Hamilton, on the 4th February. There were 78 patients under treatment on that day, viz.: 39 men, 32 women, and 7 children. The admissions since the 1st October last were 335; the deaths 31.

The public and private wards were clean and in good order; also the dispensary, operating room, bath rooms, water closets, etc.

The new wing added to the building, has been nicely furnished. Other improvements have also been made, such as new fittings, boiler, etc., in laundry. There is good medical attendance and nursing.

Books properly kept.

I inspected this Hospital on the 10th December. Considerable improvement has been made during the past few months by putting down new floors and matting, and furnishing rooms for pathological, anæsthetic and sterilizing purposes.

The new wing is fully completed and equipped. There is a fine operating room fitted with all modern appliances; also private rooms and public wards, wash and bath-rooms, and water-closets.

The laundry occupies a new building in rear of the main building. The maternity building on the premises was found to be complete in all respects; also the infectious building and other out-buildings were in good order.

There were on this date 74 patients under treatment, viz.: 30 men, 34 women and 10 children. Received since the 1st October last, 173; deaths, 12.

There is a good staff of medical men and nurses. The Board of Management appear to take a great pride in placing this hospital in first-class working order, and inferior to none in the Province. The Superintendent, Dr. Edgar, is very attentive in looking after the affairs of the institution in every detail of the work.

## INSPECTIONS.

I made an inspection of the St. Joseph's Hospital, Hamilton, on the 5th February. There were 36 patients in residence on that day, namely, 17 men and 16 women, and 3 children. Since my last inspection the admissions were 120, and the deaths 5. The public wards and private rooms, dispensary, sitting room, dining room, wash and bath rooms, water-closets, laundry, cellar chapel, nurses' quarters, etc., were all clean and in good order. The books were properly entered up.

I made an inspection of this hospital on the 10th December. There were under treatment on that day 23 patients (13 men and 10 women), and the number admitted since the 1st October was 70, and deaths 6.

New fire-escapes have been provided, and an asphalt sidewalk laid from the street to the building, during the past summer. Other improvements were noticeable also. All departments were in excellent order.

## INSPECTIONS.

SIR,—On the 21st April I visited this hospital, and found 77 patients under treatment, viz.: 38 males and 39 females.

The admissions since the 1st October last were 595 ; deaths 26.

The burning of the east wing has caused a considerable disarrangement of matters in the hospital. However rebuilding is rapidly going on and the premises will soon be restored to their usual condition.

I made an inspection of this Hospital on the 15th December. The wing of the building which was destroyed by fire last spring has been restored and carried one story higher than before. The upper flat is used as a ward for sick children. Electric lights, hydrants and hose have been placed in each flat. There is also an underground passageway to the maternity buildings. New bath-rooms, wash basins, pantrys, hoist, etc., have been provided. The basement has been finished and used for various purposes.

The register showed that there were 65 patients (31 males and 34 females) in the general wards ; and 3 infants in the maternity department. Since the 1st October the admissions were 244, and the deaths 12.

## INSPECTIONS.

I made an inspection of the Hotel Dieu Hospital, Kingston, on the 21st April. Fifty-seven patients were in residence, namely, thirty-two men, nineteen women and six children. The number treated since the 1st October last was 466 and the deaths 15.

The premises are being enlarged to accommodate some sixty additional patients. A new operating room is also under process of construction.

The private rooms and public wards were clean and in good condition, and the patients appeared to be properly looked after.

I made another inspection of this Hospital on the 15th December when there were 53 patients under treatment—26 men, 25 women and 2 children. Since the 1st October the admissions were 246 and the deaths 11. That part of the building formerly occupied by the sisters and nurses is now used for private patients and public wards, the former having removed to the new building erected on the premises near by.

This change affords accommodation for 45 more beds than formerly.

Considerable improvement has been made during the year in the way of furnishing, etc. I found all departments clean and in good order.

## INSPECTIONS.

I made an inspection of this Hospital on the 25th March. The new wing is finished and will soon be ready for occupation, adding about 75 beds to the accommodation of the institution.

On this occasion there were 44 patients (23 males and 21 females) in the wards of the main building, and 15 patients (9 males and 6 females) in the contagious building on the same premises.

All the rooms, bed, bedding, etc., were clean and in good order.

The staff consists of eight medical men in attendance and three consulting physicians.

I inspected the hospital a second time on the 22nd September.

The completion and furnishing of the new wing places the hospital in well equipped order for its work: it is very modern in every respect.

The private rooms and public wards are well lighted and ventilated.

On this occasion I found 53 patients (28 males and 25 females) under treatment. The admissions during the year were 716; deaths, 48.

## INSPECTIONS.

On the 25th April, I inspected this Hospital and found sixty patients in residence, twenty-three males and thirty-seven females.

The admissions since the 1st October were 566, deaths 30.

The new wing was nearing completion. This will add accommodation for seventy more patients. The private and public rooms, beds, bedding etc. were in well kept order, and the books written up correctly.

I made a second inspection of the Hospital on the 23rd September. There were then under treatment 74 patients, 21 men, 47 women and 6 children. Received during the year 1,011, deaths 56.

I found the new wing completed and well furnished. It is fitted with all modern appliances, elevator, electric lights, operating room, bath and wash-rooms. The Hospital can now accommodate from 250 to 300 patients, and the improvements make it one of the best in the province.

## INSPECTIONS.

I made an inspection of this Hospital on the 25th March when there were 55 women and 2 children registered as inmates. The admissions since the first of the year were 120 ; five still-born and two infants died ; no deaths among the adults.

The usual spring cleaning and renovating was in progress. The rooms, beds, bedding, etc., were clean and in good order. Books properly kept.

I visited this Hospital on the 3rd December. On that day there were 41 adult females and 3 infants in residence. The premises were in well-kept order.

Since the 1st October 25 had been admitted and 4 had died. There were 24 births in same period. No adult deaths during the year.

## INSPECTIONS.

I made an inspection of the Hospital for Sick Children, Ottawa, on the 24th April. There were then twelve children under treatment, six boys and six girls.

Received since the 1st October, thirty-two: one death during that period.

All the rooms, beds, bedding, etc., were neat and clean. No change in the building or management since my last visit.

On my second visit to the Hospital, 23rd September, there were five children in residence—four males and one female. Admitted during the year fifty-one; deaths two.

Adult patients are treated in this Hospital as private patients which impairs to a great extent the usefulness of the Hospital as such for sick children.

The building and grounds were in good order.

## INSPECTIONS.

I made an inspection of the Maternity Hospital, Ottawa, on the 20th March, when its occupants were two adult females and two infants. The admissions since the 1st October last were 30, and the deaths during same period were one mother and four infants.

There was no change to note in the buildings or grounds since my last visit. Everything pertaining thereto was in satisfactory order.

I inspected this Hospital again on the 23rd September. There were four adult females and two infants in residence. There were 59 admissions during the year and 8 deaths (3 adults and 5 infants).

INSPECTIONS.

I inspected the General Hospital, London, on the 5th April. There were then under treatment 57 patients—27 males and 30 females. Received since the commencement of the year, 440; deaths during same period 16.

I found all departments clean and in good order, and the books correctly entered up.

I made a second inspection of this Hospital on the 25th November.

There were on that day 48 patients in residence, namely: 25 men, 21 women and 2 children.

The number admitted since the 1st October was 125, and the deaths for same period 12.

The interior of the hospital was found to be as well kept as could be expected considering the old and dilapidated condition of the building. A large new three story building is being erected on the grounds, convenient to the old Hospital, and when finished will be very complete in every respect having all the modern improvements.

## INSPECTIONS.

I visited the St. Joseph's Hospital, London on the 6th April, when I found 29 patients (7 men, 21 women and 1 child) in residence. The register showed that 180 patients had been received since the 1st October, and six had died.

The premises were in the usual clean and orderly condition, and the books were correctly entered up.

I made another inspection of the Hospital on the 24th November. The number of patients then under treatment was 26, viz., 12 men, 13 women and 1 child.

Admitted since the 1st October, 64. I found the wards in the usual excellent state of neatness and the books properly kept.

INSPECTIONS.

I inspected this Hospital on the 30th March. The number of patients then under treatment was 16: 9 males and 7 females. Number of patients received since the 1st October, 141: deaths 8.

The private rooms, public wards, beds and bedding, operating room, dispensary, sitting rooms, dining rooms, wash and bath-room, kitchen, laundry, water closets, etc., were all in good order. Books properly kept.

I instructed Mr. Nicholson to make an inspection of this Hospital. He reported as follows:

As instructed by you, I visited this Hospital on the 6th August. There were then under treatment eight men, six women and two children, making a total of sixteen. The register showed that 238 patients had been under treatment during the year and fifteen had died. There were eight nurses in the training school who take duty in the Hospital as required. The records were examined and found to be properly kept.

INSPECTIONS.

I inspected the Galt Hospital on the 11th February. There were 15 patients in the wards, viz.: Eight males and seven females. Since the 1st October the number admitted was 85, deaths 7. The Hospital was in satisfactory order in all parts, and the books were properly kept.

I instructed Mr. Aiken's to inspect this Hospital. A copy of his report is annexed:

I made the second inspection of Galt Hospital on July 25th. This institution is situated in a very quiet and retired part of the town, and bears these same characteristics throughout its management. The town itself and surrounding country is very free from sickness, and consequently the population of the Hospital is never very large. Eleven patients were being treated on the day of my visit. The staff consists of seven nurses besides the lady superintendent. The institution is well conducted, clean, neat and methodical. Its records were also kept in the same manner.

## GENERAL HOSPITAL, GUELPH.

## INSPECTIONS.

I made an inspection of this Hospital on the 9th February, and found the public wards, private rooms, dispensary, operating room, wash and bath-rooms, kitchen, laundry, etc., clean and orderly.

The patients on that day numbered 67—29 men, 27 women, and 11 children.

The register showed that 206 patients had been received during the year, and that there were 14 deaths. There were 11 cases of scarlet fever in the infectious building at the time of my visit. There is a good staff of medical men and nurses, and the books are properly kept.

I instructed Mr. Aiken's to inspect this Hospital. A copy of his report is annexed:

I made the second inspection of Guelph General Hospital on July 23rd. Forty-six patients were in the building at that date. Since the erection of the new wing the total capacity is about 85.

This latter addition makes this hospital very complete in its equipment, especially in the summer months. The facilities for ventilation and the comfort of the sick seem to have been a first study in the plans of the building. Some new appliances have also been added, including a massage machine.

The institutions has 18 nurses, besides the lady superintendent and the house surgeon.

I made a close examination of the institution throughout, and found it in every way satisfactory. The hospital register and daily record book I also looked over. These were neatly and, so far as I ascertained, accurately entered up

## INSPECTIONS.

On inspecting this Hospital on the 9th February, I found 28 patients in residence—12 males and 16 females. Admissions since the 1st October last 98, deaths 3.

The private rooms, public wards, operating room, dispensary, sitting rooms, chapel, washrooms, water closets, etc., were in satisfactory order.

The building is well lighted and ventilated, and has good drainage.

Books properly kept.

I instructed Mr. Aikens to inspect this hospital. A copy of his report is annexed :

There were 41 patients in St. Joseph's Hospital, Guelph, when I inspected it on July 23rd. The total capacity is 60 beds. The institution is well managed by the Sisters in charge. Its structural character is well adapted to the comfort and treatment of the inmates. It is spacious, and at the same time compact; any portion of the building is readily accessible, yet its private apartments have all the reserve that is necessary. Doubtless this is one of the reasons why it is so popular, when it is known that in the same town is another general and thoroughly equipped competitor. In hospital work, as in general business, competition would seem to be the life of trade, good for the institution and good for the public.

I examined the books and found that the Sisters had given regular and daily attention to this part of the work.

INSPECTIONS.

I made an inspection of this Hospital on the 6th June.

Sixteen patients (ten men, five women and one child) were under treatment at that time. Received since the 1st October, 209, deaths 22.

The private rooms and public wards, beds and bedding, operating room, dispensary, dining and sitting rooms, wash and bath rooms, kitchen, laundry, and water closets were in a clean and orderly condition.

I visited the Hospital again on the 23rd November. There were then 15 patients under treatment, viz. 7 adult males, 7 adult females, and 1 child.

The building was in excellent order in every part, and the books were properly kept.

INSPECTIONS.

I made an inspection of the Belleville Hospital on the 1st February. On that day there were 20 patients in residence, namely, 9 men and 11 women. The admissions since the 1st October last were 92 and the deaths 2.

The public and private rooms were clean and in good order; also the wash-rooms, bath-rooms, water-closets, etc. There is good drainage and ventilation.

This Hospital was inspected by me the second time on the 22nd December. Thirteen patients (10 men and 3 women) were then under treatment. Admissions since the 1st October 54 and 1 death.

Everything connected with the Hospital was found to be in excellent order, and the books properly kept.

## INSPECTIONS.

This Hospital was inspected by me on the 28th March. There were in residence on that day thirty-three patients, namely, ten males and twenty-three females.

Since the first of the year there had been 150 patients received and one had died.

All the rooms, bed and bedding, wash and bath-rooms, operating room, dispensary, kitchen, laundry, etc, were clean and orderly. Good nursing and medical attendance.

## SECOND INSPECTION.

I made another inspection of this Hospital on the 21st September and found under treatment thirteen males and fourteen females. Since the first of the year 365 patients were received, and there were twelve deaths.

All departments were clean and in good order.

An addition is being built to the north of the main building which will contain kitchen, laundry and nurses' and servants' apartments.

INSPECTIONS.

I made an inspection of the Brockville General Hospital on the 28th March. There were 29 patients under treatment—13 males and 16 females. The admissions since the 1st October were 162; deaths, 8.

The private rooms and public wards presented a clean and tidy appearance. General repairs and cleaning were going on at the time of my visit. The records were correctly kept.

## SECOND INSPECTION.

A second visit to the Hospital was made on the 21st September. There were 16 male and 12 female patients under treatment on that day. The admissions since the 1st October, 1897, numbered 361 and the deaths 25.

The building was in good order in all its departments.

## INSPECTIONS.

I instructed Mr. Mann to make an inspection of this hospital, he reported as follows:

I beg to report that on the 18th August, 1898, I visited the General and Marine Hospital, Collingwood, for the purpose of inspecting this Institution as instructed by you. On this occasion there were 15 patients undergoing treatment for complaints of different character. None of them, however, were reported as being of a dangerous nature. None were infectious. Nine of the above were males and 6 females. The Superintendent, Miss Dalby, and five nurses, are employed in actively looking after the welfare of the above patients. The building was in uniform order, and the furniture and furnishings, water supply, and the general requirements necessary to the welfare of a hospital were quite up-to-date. Books were properly kept.

## INSPECTIONS.

I made an inspection of this hospital on the 8th February. There were then under treatment 9 men and 12 women—total, 21. The admissions since the 1st October were 81, and deaths, 5.

Some of the improvements since my last visit are, electric lighting, new iron bedsteads, and hot water heating. All departments were clean and in good order, and the books properly kept.

I made an inspection of this hospital on the 8th September, when there were 22 patients in residence, viz., 9 men, 12 women and one child. The admissions for the year numbered 284, and the deaths, 13.

A cooking class for the nurses has been established, and is carried on during the winter months.

A root house has been provided for storing vegetables.

The books were written up.

## INSPECTIONS.

I made an inspection of the St. Joseph's Hospital, Peterborough, on the 8th February. There were 16 patients on that day, viz.: 7 men, 7 women and 2 children. Since the 1st October last 54 had been admitted and 2 had died.

The institution was clean and in good order in all parts. The upper flat has been appropriated for cases of scarlet fever, measles and diphtheria. The old people have been removed to another building.

I made an inspection of this Hospital on the 8th September. On that day there were 22 patients in residence, namely, 10 men, 10 women and 2 children. There were a number of cases of typhoid and diphtheria under treatment.

The admissions during the year were 184 and the deaths 3.

I found the Hospital in good order and the books properly kept.

## INSPECTIONS.

I made an inspection of the St. Joseph's Hospitals, Chatham, on the 8th March. There were 15 patients in residence on that day, viz.: 6 males and 9 females. The admissions since the 1st October numbered 120, and more than half of them were Protestant in religion. During the same period there were 7 deaths.

All the rooms—dispensary, operating room, wash and bath-rooms, water-closets, etc., were well kept. The books were written up to date.

This Hospital was inspected by me on the 24th October, when I found it in its usual clean and orderly condition. There were 17 patients under treatment on that occasion, namely: 6 males and 11 females, a number of whom were typhoid cases. The books were properly entered up.

## INSPECTIONS.

I made an inspection of the General Hospital, Chatham, on the 8th March, and found it in its usual condition. All the rooms, beds, and bedding were clean and in good order. There were 20 patients in residence—6 males and 14 females. Since the 1st October, 113 had been admitted, and 4 had died. Books properly kept.

I made an Inspection of the Hospital on the 24th October. The patients on that day were 9 adult males, 10 adult females and 1 youth—total, 20. There were no cases in the contagious department.

The Hospital and premises were in good order in every respect.

The building for contagious diseases has had the basement excavated and a furnace placed in it. The erection of a new wing to the main building is also in contemplation.

Government grant for 1898 . . . . .	\$1,265 22

## INSPECTIONS.

I visited the General Hospital, Stratford, on the 11th February. There were then 28 patients in the wards, namely, 14 men, 12 women and 2 children. The admissions since the 1st October were 77, and the deaths 3.

Among the improvements to be noted since my last inspection were the completion of the new laundry, and the enlargement of the kitchen. It is the intention of the management to erect an isolated hospital for contagious diseases on the grounds.

All departments were in good order in all respects. I found the books properly kept.

I instructed Mr. Aikens to make the second inspection.

This Institution had 24 patients in residence when I inspected it the second time, on September 29th. After making a general survey of the building, I found it maintained its character for cleanliness and neatness throughout. Some changes made in the kitchen, which is on the upper storey, render the domestic duties much easier to accomplish. The operating room also has been further equipped by the addition of a case of new instruments. These, with portable bath tubs, were the principal improvements I noted. The addition of a passenger elevator would make this one of the most commodious hospitals in the Province, and I understand this idea has already been suggested to the Board.

I looked closely into the books and found that regular attention had been given to the Daily Record, and that the others were well adapted for keeping an accurate and systematic history of the treatment of patients as well as finances.

INSPECTIONS.

I inspected this Hospital on the 4th April. There were 11 patients in residence—5 males, 4 females and 2 children. Received since the 1st October, 81; deaths, 6.

The private rooms and public wards, operating room, sitting room, kitchen, laundry, bath and wash rooms were all in good order. The books were well kept.

This Hospital was inspected by me on the 12th August. There were fifteen patients under treatment on that day, namely, nine men and six women. The admissions since the 1st October, were 142; deaths, 11.

The public and private rooms, operating room, sitting room, wash and bath rooms, water closets, etc., were all in satisfactory order. Good nursing and medical attendance. Books properly kept.

INSPECTIONS.

I made an Inspection of this Hospital on the 1st August. There were in residence on that day 13 patients, namely, 7 males and 6 females; 92 patients I found had been registered since the first of the year, and 4 had died.

There was no change to note in the condition of the building or grounds since my last inspection. Coal-oil lamps are still in use, and it is very important that gas or electric light should be put in the building, being safer and more economical. The operating room has been somewhat improved. The sidewalk from the street to the Hospital has been completed; the bridge in front of the building requires to be put in a good state of repair, in fact, a new bridge is required.

The second inspection was made by Mr. Christie, who reported as follows :

I Inspected this Hospital for Dr. Chamberlain, on the 17th October, and found sixteen patients under treatment, namely, eight males and eight females, all of whom were evidently well cared for and under special treatment, according to their different ailments.

The books were well and neatly kept, and the Hospital was in excellent order. The register showed that 135 patients had been under treatment during the year.

## INSPECTIONS.

I made an inspection of the St. Joseph's Hospital, Sudbury, on the 31st October. There were then twelve patients in residence, namely, eleven males and one female.

Received since the 1st October last, 20 patients; no deaths.

The management were preparing to move into their new hospital, erected during the past year, and expect to be settled in it by the 1st January. There is good medical attendance and nursing.

## INSPECTIONS.

I inspected this Hospital on the 25th January, when there were only two patients in residence—one male and one female. The admissions since the 1st October numbered 30, and two had died.

There was no change to note in regard to the building or furnishings since my last inspection. I found some irregularity in the entries in the books through the discharge not being properly filled up.

I made an inspection of this Hospital on the 21st October. Nine male patients under treatment on that day. Received during the year 71; deaths 7.

Improvements were being made in the basement, and new water-closets were being put in. The building was in a clean and orderly condition.

## INSPECTIONS.

This Hospital was inspected by me on the 25th January. All the rooms, beds, bedding, etc., were in good order. There were twelve patients under treatment, namely eight men and four women, and the admissions since the 1st October were 75—deaths 1.

There is a good medical staff and good nursing. Books were in proper order.

I made an inspection of this Hospital on the 21st October. There were ten patients in residence, eight men and two women. The admissions for the year were 172. No change in the building or grounds since my last visit. All in satisfactory order. Books well kept.

## INSPECTIONS.

I inspected this Hospital on the 2nd April, when there were nine patients in residence—three males and six females. The number of patients received since the 1st October were 60 ; deaths during the same period, 7.

Everything about the Hospital was found to be in satisfactory order, and the books correctly kept.

I visited the Woodstock Hospital on the 1st September. There were five patients under treatment, four males and one female. During the year 105 patients were received and there were 10 deaths during that period. I found the Hospital well equipped with all necessary appliances, and in excellent order throughout. There are eight doctors on the staff and nine nurses.

The books were entered up.

## INSPECTIONS.

I visited this Hospital on the 10th February. There were ten patients under treatment, five males and five females. The number admitted since the 1st October last was 51; no deaths during that period.

The building was found to be in its usual condition of good order. The private and public rooms, surgery, operating room, sitting room, etc., were clean and well kept. There is good medical attendance and nursing.

I instructed Mr. Aikens to inspect this Hospital. A copy of his report is annexed:

The Berlin-Waterloo Hospital had 13 patients in residence when I inspected it on July 25th. The hospital has now been receiving patients for about 3 years, yet the attendance has never been very large. Situated as it is between two prosperous towns, whose united population is between 11,000 and 12,000, and being the only hospital in that part of the country, a much larger hospital attendance might be expected. Compared with the next county East the county of Waterloo does not appreciate the establishment of a hospital in its midst, or else the inhabitants are particularly exempt from sickness and accident. The fact is however that there is quite a difference in the respective populations of the two counties. The hospital idea is quite a new feature among the Germans who are naturally very conservative, and considerable hostility will have to be lived down before they take kindly to treatment in such an institution.

The building is very well managed and equipped for its work, and its finances also are in good shape.

---

INSPECTIONS.

On the 9th April I inspected this Hospital, and found everything in connection with it in excellent order. There were 26 patients, 11 males and 15 females under treatment on that day. The admissions during the year were 126, and the deaths 3. There is a good staff of medical men, and efficient nursing.

I made another inspection of the Hospital on the 24th November.

There were 24 patients in residence, viz., 10 males and 14 females. Since the 1st October 40 were admitted and 2 died.

About all the accommodation at present available for patients is taken up, and it will be necessary to complete the unfinished part of the building at an early day in order to admit all those applying for admission.

The private and public wards, operating room, dispensary, kitchen, bath-rooms water closets, etc., were in good order. There is good medical attendance and nursing.

INSPECTIONS.

I made an inspection of this Hospital on the 21st January. There were two males and four females then under treatment. Thirteen patients had been received since the opening of the Hospital, and one had died.

The private and public rooms, beds, bedding, wash-room, bath-room, water-closets, etc., were in good order.

There is a good staff of medical men and nurses. A registration book has not yet been provided.

I made an inspection of this Hospital on the 22nd October. There were then in residence thirteen patients—seven males and six females. The register showed eighty-three admissions since the opening of the Hospital, and six deaths.

The private and public rooms, operating room, bath room and water-closets were in good order. The board-room has been partitioned off for an anesthetic room, convenient to the operating room. The books were properly kept.

## INSPECTIONS.

I made an inspection of the Hotel Dieu Hospital, Cornwall, on the 23rd April. There were 22 patients under treatment, 9 men, 11 women and 2 children.

The private rooms and public wards, beds and bedding, operating room, dispensary, dining-room, kitchen, laundry, water-closets, etc., were all clean and in good order.

The number of patients admitted since the 1st October, 1897, was 135, and the deaths, 3. Good medical attendance and nursing.

My second visit of inspection to this Hospital was made on the 24th September. There were then 28 patients in residence, 17 males and 11 females. The admissions since the opening of the Hospital were 358, deaths, 9.

The building was in a good condition of order and cleanliness, and the books were well and neatly kept.

## INSPECTIONS.

I made an inspection of this Institution on the 21st June.

There were then 27 patients in residence—11 males and 16 females.

The register showed that since its opening 89 had been admitted, and 2 had died.

The main building and all the cottages were in excellent order.

They are well heated, lighted, and ventilated, and have good drainage.

Dr. Elliott, the house surgeon, is in charge, and has an efficient staff of nurses.

I visited the Sanatorium again on the 23rd October. There were 31 patients in residence on that day, namely, 15 males and 16 females.

Since the opening of the Institution 85 inmates have been received, and 3 have died.

Three cottages are occupied in addition to the main building, and two more are in course of erection. When completed fifty patients can be accommodated.

All departments were in excellent order. The buildings are electric-lighted, and have good drainage and ventilation. The management, under Dr. Elliott, is in every respect good.

INSPECTIONS.

I made an inspection of this Hospital on 2nd September. There were 16 patients in residence, 15 males and 1 female. Since the commencement of the year, 97 had been admitted and 10 had died.

All the rooms, dining room, kitchen, laundry, wash and bath rooms, water-closets, were clean and in good order.

A stone basement has been put under the building since my last inspection, and a hot-air heater has been added. A tank for water has also been erected and is supplied by a force pump. Water-closets are in the building. The old water-closet outside has been removed, as requested at my last inspection, and a drain has been constructed across the highway into the swamp at the north. The Hospital now has electric lights, and is very complete for its work. The accommodation, however, is too limited. A wing to the building is very much needed to provide for the number of sick applying for admission.

There is a lady superintendent in charge, four nurses and a good medical staff in attendance.

Books properly kept.

THE INSTITUTION  
FOR THE  
EDUCATION OF THE BLIND

---

TWENTY-SEVENTH ANNUAL REPORT.

In presenting my report upon the work of this Institution, for the year ending September 30th, 1898, it is not necessary to make a lengthened statement in regard to its operations.

The very full reports of the Principal and Examiners, which are submitted, give in detail the work accomplished.

From its past history as an Educational Institution, its present proficiency and future prospects for accomplishing the work it was designed to do by the Legislature, we may look for a greater measure of success than has yet been attained in imparting instruction to the blind children of our province.

There have been but few changes in the teaching staff during the year. The general health of the pupils, officers and teachers has been exceptionally good, as will be seen by the report of the attending physician.

The progress made by the pupils in music, literature, fancy work, type-writing, willow-work and cooking, has been very satisfactory. See the reports herewith submitted.

The average attendance of pupils has been about the same as in past years. The yearly per capita cost is considerably lower than that of institutions of equal standing elsewhere.

The want of more accommodation on the girls' side of the building appears to be a growing necessity. See the Principal's report.

The domestic management has been well looked after by the Matron who is ever watchful in providing for the requirements of the pupils.

The instruction in willow and cane work, given to a number of the pupils by Mr. Truss, has been very thorough in every respect.

The buildings and grounds have been kept in good repair and order, and present an inviting appearance. The usual repairs to class-rooms and floors and ceilings of other portions of the building have been attended to during the summer vacation.

The farm stock, agricultural implements, etc., have been properly cared for, and the farm has been fairly productive during the year.

The officers and teachers have been diligent in the performance of their respective duties during the year, and have at all times been courteous and attentive in rendering me such assistance as I required in connection with my official visits to the Institution.

The appended tables and statistics give full information as to the pupils :

#### INSPECTIONS.

I made an inspection of the Institution on the 6th of June.

The pupils were packing up their belongings and preparing to return to their homes for the summer holidays. The teaching staff were also expecting soon to be relieved from duty, only the Principal and Matron remaining on the premises. There were 135 pupils on the roll, namely, 69 boys and 66 girls. All were in good health.

There will be some slight changes in the teaching staff, both in the music and literary departments when the next term commences.

In addition to the literary and musical courses the pupils are instructed in cooking, sewing, knitting, etc. Basket-making and chairs in willow-work give employment to the older boys.

The offices of the Principal and the Bursar were in good order, also the school-rooms, dormitories, chapel, dining-room, kitchen, gymnasium, boiler-room, out-buildings, etc. Horses, cattle and hogs are kept on the premises. The crops were looking fairly good.

The general repairs required, such as renewal of side-walks and fences, painting, etc., have been arranged and will be attended to at the close of the session.

I visited the Institution again on the 21st of November. There were then enrolled as inmates, 64 boys and 62 girls, total, 126. At the opening of the session 128 were received, but two were dismissed for cause. Five or six cases of diphtheria have occurred during the past few weeks, but all are now convalescent and the spread of the disease seems to have been checked.

The teachers were all at their posts, and diligent in their work.

There appears to be an urgent necessity for more accommodation, especially on the girls' side of the Institution.

All departments of the Institution were in satisfactory order.

The farm has been very productive during the past season and there is an abundant supply of vegetables. The farm stock, including the horses, was in good condition.

## PRINCIPAL'S REPORT, 1898.

T. H. CHAMBERLAIN, Esq.,

*Inspector, &c.*

SIR,—I have the honor to submit my report for the year ending September 30th, 1898.

In my last report I drew attention to the steadily progressive principles on which the Institution had been conducted, and its methods and appliances, for the physical, mental, and industrial training of its pupils gradually and systematically developed. And this too, it may be added, while the expenses have been kept well under control.

The year just expired has been no exception to its predecessors in the above regard.

## PROGRESSIVE IMPROVEMENT.

The introduction of the type writing machine, largely used already in the institutions of Great Britain and the United States, furnishes the blind writer with a means of communicating by correspondence with sighted persons that the point print cipher does not secure, except in a very few cases. The method of writing still taught by means of a pencil and grooved card often supplies a manuscript difficult to decipher and easily obliterated or dimmed. The almost universal adoption of the type writing machine in business communications makes people generally less tolerant of an indistinct hand-writing. While the blind pupil, with grooved card and pencil, is under instruction, he may be able to turn out a fairly good manuscript, but, not having the correcting influence of the eye to depend upon, he is almost certain when left to himself to degenerate and to produce a gradually less and less intelligible scrawl. These considerations have so far influenced many of the conductors of institutions on this continent, and also in Europe, that the pencil and card have been wholly discarded therein, and the only systems known are those represented by the type-writing machine and the point print slate. I do not advise a too hasty change in this regard. The mere practice of using the pencil and forming the letters is good of itself. And who that has watched with parental tenderness over the gradual development of a blind child, will fail to understand what a joyful event is the arrival at home of the first letter ever traced by that child's own hand. Then again the expense of the machine will be prohibitory in many instances when the pupil has retired from the Institution. We have now, however, a class in regular training under three of our literary teachers and making good progress. Accessions to this class and additions, I trust, to our at present limited stock of machines, will be in order.

In Great Britain the business of type-writing in connection with the phonograph has been taken up by and on behalf of blind young persons. But in the Mother-land the philanthropic idea widely prevails, and I am inclined to think enters nearly as closely as the purely commercial into these arrangements. We have to consider the economical and competitive aspects of such questions almost exclusively. That blind persons can use the type writing machine with marvellous rapidity and exactness is, however, a fact to be mentioned with pleasure.

A cooking-class was tentatively opened some time since, but our other duties did not then permit of its continuance. It is now regularly organized and in daily session, both in its practical and theoretical details.

A third, and not the least important of recent moves in the line of advance has been the introduction of a regular plan of biblical instruction into our daily curriculum. The first half-hour in the school day is devoted to this object. The Bible is the text-book, with such helps as a well selected list of commentaries may supply, and members of the regular staff are the teachers. Not a dollar has been added to the salary list as the result of any one of these new plans or duties, the work being cheerfully undertaken by the teachers in a most generous and liberal spirit. Nor do the daily Bible classes affect in the least the Sunday School among the pupils which has been in existence for many years. In the former, as in the latter, the instruction imparted to the Roman Catholic pupils is under the direction of officers of their own communion.

#### A GREAT WANT.

The fact that, on the male side of the building the attendance has, on the whole had rather a tendency to diminish of late years, has of course affected the total numbers but, at the same time, has afforded no relief to the congested condition of the female side. Numerically the male and female pupils are now nearly equal while they formerly stood as at about four to three in favor of the former. Some twenty years ago the west (male) wing was enlarged by an addition ninety feet in length and supplying a hospital ward, pupils and officers' rooms, class rooms, and many other conveniences on that side of the building. I may here remark that the question is not so much one of mere sleeping accommodation as due provision for order, (most essential among girls) for health, in a building to which they are confined for so large a portion of their time, and for the several departments of work which life here pre-supposes. Under the latter head come, with especial force, the needs for ample accommodation for music teaching and practice. I will now briefly recapitulate the deficiencies we suffer from as the result of the deferred action, originally contemplated, in regard to the east (female) wing.

1. We have, at the outside, suitable sleeping accommodation for fifty-eight. We closed last session with a female pupil population of sixty-six and two junior officers, adults, who have to share a room with pupils. In their places we have now sixty-three with three to come and the chances of admissions for a whole session before us.

2. There are no wardrobes in the female dormitories nor room for any in the present crowded space. The pupils's trunks are in the bed rooms and are the only receptacles for their clothing. These arrangements, or defects in the arrangements, are most prejudicial to those orderly habits it is pre-eminently necessary to inculcate.

3. The girls' nurse has no separate sleeping apartment. She has to occupy a small chamber divided off from the girls' sanitarium, their resort all day, an arrangement neither healthy nor convenient.

4. The female teachers private rooms have to be shared by two persons. This has been a cause of chronic annoyance.

5. The girls, unlike the boys, have no hospital ward whatever. The only resource, if a female pupil is seriously ill is to place her in the local hospital or in the boys' sick ward with a hired nurse. In the cases of the disorder being of an infectious nature the latter course is unavoidable for the local hospital does not

take such cases. Then we run the very probable risk of distributing infection on both sides of the building instead of limiting it to the one in which it has originated. In this connection I may remark that, in the west wing, we have a room, large and airy, adjoining the boys' sanitarium, where a boy slightly indisposed can be attended to or find rest and quiet, or, even if his case be more serious, but not infectious, he can be waited on there by our own nurse without taking her away from her daily routine duties. On the east side we have no such provision and a girl suffering from any passing malady must occupy her usual bed and sleeping apartment with her companions congregating around her.

6. Connected with the lack of space in this wing is the want of proper accommodation for the female servants. Some are crowded into a room among those of the female pupils, which is undesirable. Others are located in the region of the pupils' and helps' dining rooms, a condition of things very inexpedient and, in case of illness, disagreeable all round.

7. On the girls' side the music pupils bear a much larger proportion to the whole female pupil population than do the boys taking music to their companions. Yet we have fewer instruments for practice on the former than on the latter and have no room for more. One music teacher has to hold her classes in the guest-chamber and pupils have to practice there. There is altogether too short a supply of music practice which as is well known is essential to successful teaching, and only more practice rooms can meet this need.

8. On the boys' side the gymnasium is thrown open to the senior boys for study or mental recreation. But, in the absence of any room whatever in their wing, the girls are forced to resort to their dormitories an unavoidable but most objectionable practice.

These are reasons which, I humbly submit, make the addition to, or more correctly speaking, the completion of the east wing as nearly as possible a necessity. The fact that I have now kept it before the authorities since the year 1884 will show that the case is not submitted without due consideration.

#### PUPIL POPULATION.

The number of pupils now on the register is 121 of whom sixty are males and sixty-one females. At the close of the late session there were on the resister 135 of whom sixty-nine were males and sixty-six females, leaving twenty-five,—thirteen males and twelve females to be accounted for, as follows:

Graduates :—

Willow-shop.....	1	0
Piano-Tuning.....	3	0
Pipe Organ, Piano, Theory and Literary classes....	1	0
Willow-shop (partially qualified).....	2	0
More or less advanced in various departments....	0	5
Retired, (fair vision).....	0	1
Mentally defective.....	0	2
Preferred a vagrant existence.....	1	0
Temporarily detained ..	5	4
Total.....	13	12

In addition to the foregoing a young man who had taken a creditable course in piano-tuning and some other branches, presented his certificate at the end of his twelve-months probation, of having attained full proficiency in the service of

a competent instructor. He was consequently allowed his outfit. The reports from all our graduates of last session, so far as they have reached me, have been satisfactory. A few words in regard to others on the list may be desirable.

Of the youth whose graduation is referred to in the third item of the above list it is pleasant to state that, after taking a thorough course here in the literary classes, pianoforte, and theory, as well as attaining very creditable proficiency on the pipe-organ, he has entered the Toronto Conservatory of Music, passing the necessary examinations with honours in theory (intermediate) and piano, and, if his life is spared, may look forward to a successful or even brilliant career in his profession.

The two work-shop pupils who have started on their own account, left contrary to the advice of their friends I understand, the one being within a year of full graduation the other very far short of such qualification.

The five female pupils noted as having retired in a more or less advanced stage of instruction, have probably reaped all, or nearly all the benefits the Institution is capable of conferring on them, having regard to their several abilities. All have gained an amount of information and benefitted by a training that will make them useful in their respective homes as well as happier in their own lives.

The last on the list of retiring pupils is one of those cases the directors of institutions for the blind too often have to grieve for. The young man in question had done very fairly well in his literary classes, and, although he made slower progress in music, had a decidedly musical ear and would have graduated probably as a piano-tuner next June. He had all the advantages an urban home could give for exercising his craft, and the example of the success of others similarly situated in his own neighborhood to encourage him. But his surroundings were disadvantageous and parental control was as weak as other influences were evil.

We closed the session, it has already been mentioned, with 135 pupils on the register. We have re-opened with 121. Of the intended return of eight or nine others at short intervals we have been advised.

The termination of the official year so soon after our re-assembling, places us at some disadvantage in a numerical showing. I have four applications already from new pupils before me, in addition to those already received, so that last year's total is likely to be reached and probably exceeded. For more female pupils, in addition to those expected, it would be difficult to find room.

The new admissions are as follows :

	M	F	
Twenty-eight years . . . . .	0	1	
Twenty-four " . . . . .	1	0	
Twenty " . . . . .	0	1	
Nineteen " . . . . .	1	1	
Seventeen " . . . . .	0	1	
Twelve " . . . . .	0	1	
Eleven " . . . . .	1	1	
Nine " . . . . .	0	1	
Seven " . . . . .	1	0	
Total . . . . .	4	7	11

One hundred and forty seven pupils, seventy-four males and seventy-three females, were enrolled during the official year.

## LITERARY AND MUSIC CLASSES.

For full reports of the progress of the Literary and Music classes I may refer you to the views expressed by the very experienced examiners in those departments. But while it is their duty, more particularly, to test the quality of the work done here, and of the teaching imparted, it is peculiarly mine to consider along what lines the blind pupil may be most profitably led and what is to be the effect of the instruction he or she receives on the pupil's future success in life. In past years I have entered pretty fully into the question of literary instruction in this relation. And, with rare exceptions, looking at the local conditions and social surroundings of most of our pupils, while advocating a good solid school course in every instance, I do not see much to justify any reliance on a literary training as a means of financial support. In the case of music, however, especially as regards male pupils, the study and attainment of a high degree of proficiency is full of promising opportunities. Especially so when, to the profession of the musician is added that of the piano-tuner. It is not surprising, considering what difficulties a blind person has to contend with, that, even with apparently good chances failures should occur. They are not unknown I believe among the seeing. But, where a young man has graduated in music, he will usually do well and if, in addition, he is an expert tuner he can hardly fail to do well. I do not believe there has been one actual failure among the graduates of the class I have described except from causes of a nature that will wreck life's prospects anywhere. In this connection, and as a just tribute to one more than usually worthy, I may briefly allude here to the death of an old pupil whose name is honorably mentioned by our musical examiner. William A. Wells, familiarly known among his friends as Willie Wells, was for years a pupil of this Institution coming from his home at Brockville when quite a little child, and remaining until on the verge of manhood. He was totally blind from infancy, and had no conception whatever of the form of external objects except as realized by touch. I am not aware that he had what is called genius for any thing in particular, but he had a very intelligent mind, and, added to this, a most conscientious application to the duty of the hour. Willie Wells was a great favorite with the audiences in our music hall, first as a juvenile reciter and, as he advanced, as a vocalist, until he became familiar as the possessor of marked musical talent and a participant in every programme. When he retired, in 1893, he was a competent piano tuner, had taken a thorough literary course, was an excellent organist, excelled in pianoforte, had well mastered harmony and the theory of musical composition, had a fair knowledge of the violin, and considerable power as a vocalist. Let me add, too, that, with these educational attainments, he combined an integrity of character and sweetness of disposition that endeared him to all his associates. An early appointment as church organist awaited him at Brockville where he soon became not only a successful teacher and tuner, travelling about independently in his work, but a prominent figure and favorite performer at all local festivals and entertainments. In the further pursuit of his studies he received much help from his former teacher Miss M. A. Callaghan, now engaged in her profession at Brockville, and passed under her auspices, the senior examination in vocal music at the Dominion College of Music in Montreal. Willie Wells was constitutionally delicate and, while conducting a concert in a cold church last winter, he contracted the illness which, in a few weeks terminated fatally, to the regret and sorrow of the whole community at Brockville and to all who in life had known and honored him. There are many disappointments always awaiting the educator of both the blind and the seeing. Willie Wells on the contrary presents an illustration of the effect of long, faithful and laborious

teaching, cheered all along the line by the resolute purpose of the pupil to achieve success, and a mind undisturbed by the troubles incidental to youthful folly or waywardness. I would not like to omit some reference to one whose memory is so encouraging to those he has left behind him.

In addition to the young man mentioned among this year's graduates, I have the pleasure of noticing the fact that, at the same examination one of our female pupils passed with honors her second year in piano at the Toronto Conservatory of Music.

#### THE WILLOW SHOP.

The report of the Trade Instructor, Mr. Truss, is given below. I have adopted the plan of apportioning a short time each day to a number of lads whose working hours are not otherwise filled up in order to induce industrious habits and at the same time to afford them an opportunity of getting some insight into the department a certain proportion of them will one day be more closely attached to. Several of these youths have shown quite an interest in the light labor assigned to them. Mr. Truss continues to watch the progress of former pupils and to extend to them his helpful counsels and advice as occasion or opportunity offers. Especially has this been the case in respect of the selection of new and economical material for various descriptions of goods the manufacture of which has, in several instances, been found very profitable.

The report of the Instructor is as follows:—

#### TO THE PRINCIPAL:

SIR.—I have the honor to submit my report upon the operations of the workshop during the year ending 30th September, 1898.

The session has been one of steady progress on the part of the pupils and their conduct deserves special mention. Not once during the whole of the past session did a pupil's behaviour call for serious remonstrance or an unfavorable report to the Principal.

Particular mention may be made of one young man totally blind and almost totally deaf, who, during his first session in the workshop, although instruction had to be given to him by ear trumpet, made such phenomenal progress as qualified him for a vacation supply of models and material. These he turned to good account. Such application, industry and intelligence deserve special recognition.

One pupil graduated from the shop at the close of the session and was given a complete outfit of tools, models, willow and cane. The reports that have come from him indicate that he is making a good use of his instruction and working industriously at his trade.

Two pupils, who for their own good, should have returned to the shop this session, are attempting what I fear is a premature effort to manufacture willow-ware in partnership. I am less sanguine than desirous of their success.

Mention may also be made of the large number of younger boys who attend in the shop for a certain period daily for the purpose chiefly of learning cane-seating, etc. One of these lads informs me that during the vacation he collected all the old chairs he could find and put new seats into them, earning in this way quite a considerable amount of pocket money.

We are receiving encouraging reports from a number of former graduates. Two were recently visited in Toronto. They are working steadily, their order for baskets being three months ahead of their out-put. Among others seen, on

young man in London has been working for several years since he graduated from the Institution, and has been successful in maintaining himself by his own industry. The destruction recently by fire of his workshop with a quantity of material and his models, afforded the opportunity for showing some practical interest in his welfare and assisting him to overcome his temporary difficulty.

The occasional visiting of graduates and the suggestions made to them are helpful and encouraging.

I have given considerable thought to devising and experimenting as to the uses large quantities of waste cane-binders that our cordage factories have in the pass burned or thrown away may be put to. A number of our pupils are now working this material into coarse baskets.

At the present time I am trying to invent a light and cheap chain-guard for ladies' bicycles, and hope soon to be able to instruct an intelligent pupil in its manufacture. A sample guard sent to your office is the result of considerable thought and patience, and if it leads to a further opening for the products of our pupils' industry I shall be thankful.

I have the honor to be, etc.,

THOMAS TRUSS,

Trade Instructor.

#### SEWING AND KNITTING CLASSES.

The importance of the industrial classes in feminine industries cannot be too strongly emphasized. The personal protection absolutely demanded by the blind young woman precludes the independent action on her part which enables the young man to push his way in the world in connection with such avocations as I have already referred to. Success to the former can only come when the environment is favorable, and this, in too many instances is quite the reverse. Many a comfortable home is situated in districts where music pupils are very few or wide apart: in other cases the domestic conditions are unfavorable. So that it has happened too frequently that decided musical talent and a most creditable musical course have resulted in little pecuniary benefit. As population increases and local centres develop these disadvantages may diminish. Meantime I would always treat music as a legitimate subject of instruction to all girls capable of receiving it, even although its application be limited to home life. Still, I am more and more convinced, and endeavor to persuade our female pupils, that, in the domestic industries lies their chief prospect of future usefulness. And I am pleased to notice an increased willingness on the part of many to accept this view and be guided by it. I may here just mention that the netting of hammocks and some other string goods has been quite popular of late with pupils from both sides of the building.

#### THE COOKING CLASS.

In the foregoing connection the cooking class, already referred to, will, I have reason to believe, take a front place. After various vicissitudes it has now been put on a permanent footing, and six pupils take instruction daily from the lady teacher at the head of the kindergarten and primary classes who has accepted this one in addition to former duties. The class devotes an hour and a half in the forenoon to instruction alternately in the practical and theoretical knowledge of domestic cookery.

## OTHER DEPARTMENTS.

Other departments not yet specifically referred to may be briefly noticed. The Gymnasium has continued to do good work. In my opinion physical culture should take precedence of everything else in arranging for the instruction and training of the blind. Its importance is now universally recognised, and our apparatus and appliances are those of which any institution may be proud. Our instructor, Mr. Padden, is an enthusiast in his work, and loses no opportunity for improving and extending it. All the pupils, unless excused for cause, enjoy the benefit of systematic exercise.

The Kindergarten class is in a lively condition and consists at present of sixteen young pupils.

There have been several additions to the library as follows:—In line type: Quentin Durward, Fairy Stories and Tales, Don Quixote, Adam Bede, Twice Told Tales, The Alhambra. In point: Voyage to Lilliput, Voyage to Brobdignag, Early English Ballads, Gods and Heroes of the North, Life and Death of Jason, Dante's Inferno, Story of the Enead, Idyls of the King, Music and Morals.

## HEALTH.—DISCIPLINE.

The health of the pupils has been good; the condition in which they returned after the recent vacation was particularly satisfactory.\* Their conduct generally also admits of a favorable report. For details as to health I must refer you to the report of the physician.

## FARM, GROUNDS, ETC.

The season has with us been very favorable to the growth of all kinds of farm produce. Our crops of roots and vegetables for both house and farm-stock consumption have been ample.

Owing to the fair amount of rain that has fallen in this district the grounds have preserved, to an unusual extent, their freshness and beauty. The trees too, of which this fine property was once so bare, have made excellent growth, and some are of surpassing beauty. Very few additions to their number are now needful and those only to fill up vacancies, but a more systematic treatment of them by a skilled gardener would be desirable.

## BIENNIAL CONVENTION.

The Biennial Convention of Educators of the Blind was held this year at the Michigan School for the Blind at Lansing. I had the privilege of being present and was accompanied by my colleagues Mr. W. B. Wickens and Miss C. Gillin, both of the literary staff. Nothing was wanting on the part of Superintendent Church and his excellent wife to make the visit delightful in a social sense, and the cordial reception given to Canadian delegates at all times was accentuated to even a greater extent than usual both by our fellow members and the citizens at whose head, as Mayor for the year, we had the pleasure of being greeted by a gentleman claiming to be a native of this (Brant) county.

Personal intercourse with the many highly cultivated educationists met on these occasions cannot fail to be most encouraging and profitable. The only draw-back this year to interrupted benefit was the ever-intrusive and apparently

\* In the months of October and November some half dozen cases of diphtheria of a mild type occurred, but none assumed a serious character and the routine of the Institution was not affected in any way.

interminable dispute between the promoters of the rival systems of Braille and Wait, or New York, Point Print. This question affects the management of the American Printing House for the Blind, which holds its annual meeting during the convention and of that institution all Superintendents of Institutions for the Blind in the United States are trustees. So much time was occupied in the discussions of this body as seriously to limit those of the convention, and to provoke a respectful protest against the time of the latter being so infringed upon. It was understood that in future the inconvenience would be remedied. I have no doubt that both systems of Point have their advantages but, so far, have heard no reasons given in support of the Braille that would justify our adopting it in preference to the New York point which was selected by my predecessor as the one then most generally approved. But there are disadvantages in having two systems and I should hail with much pleasure a termination of the strife by the adoption, if it were possible, of one common cipher, combining the merits of both methods.

#### A GREAT BOON TO THE BLIND.

The legislation of last session of the Dominion Parliament included a great boon to the Blind of all classes. The literature used by blind persons in whatever type is enormously bulky in comparison with that available by the seeing. It is also very costly and although now including many popular authors and books of the highest class is still limited in amount. Then, again, it is divided into three or it may be said four classes: (1) the embossed Roman letter used in our own and many of the American schools and adapted well to the wants of the young and those whose touch retains its sensitiveness, but of little use to the aged; (2) the New York point or cipher in which most of the new publications of the American Printing House are now issued and with which all our pupils are familiar; (3) the Braille, also a cipher and a modification of the French original; and, (4) the "Moon" type, an English system of large bold characters and not very different in some of them from the ordinary text. Its publications are issued from the establishment of the late Dr. Moon in Brighton, England, of which Dr. Moon's daughter is the head. By this method even the very aged, if blindness overtakes them, may learn to read by touch. This was exemplified in a very interesting manner in the case of a lady in this city who became blind at the age of eighty-three and who was able with the assistance of "Moon," to read the Bible with ease and fluency. But, from its nature, the "Moon" involves both cumbrous and costly literature. On the other hand, there are scattered over this Province and far beyond, a large number of blind people to whom the ability to read is a priceless privilege, yet who, living far from any public library where in some cases a limited supply of books for the Blind can be had, have been cut off altogether from enjoying it, unless, at the expense of several dollars, they could buy a book outright, or find some one willing to send them one on loan by mail at a heavy charge for postage. I have had the pleasure of responding to many such applications, and have mailed books for the use of a blind but partially educated Indian as far as the northern limits of British Columbia from a small store of "Moon" books we happened to have on hand. Now, the postage difficulty is at an end. On representations made to him by the excellent superintendent of the Halifax School for the Blind, Mr. C. F. Fraser, and which I had the honor and pleasure of warmly supporting, the Post-Master General introduced an amendment to the Postage Act which provided that all embossed books for the Blind should be carried by the mails in Canada FREE OF CHARGE. So that now, a book can be mailed at request, and re-mailed either to the original lender or some other blind reader with no expense what-

ever. The only want will be the books. Naturally enough blind people and their friends look to an institution such as this for aid. And I trust it will be afforded. I propose to ask for a small grant to enable us to establish a circulating library to be worked through the males and to consist of those books most in demand, the several parts of the Holy Scriptures to begin with. Borrowers might give some sort of introductory reference in the first instance, but little danger of misappropriation would be found to exist.

#### THE STAFF.

Two changes have occurred in the staff during the year: the first in December last, owing to the death of Mrs. Plewes, one of our music staff, who had filled that position faithfully and efficiently for many years. The sad event was deeply regretted by all with whom the deceased lady had been so long associated. Mrs. Plewes' place has been satisfactorily filled by the appointment of Miss Ella Crompton a graduate of the Brantford Young Ladies College. The other change was rendered necessary by the resignation of Mr. J. Parnell Morris, our resident Music Master, who had obtained an appointment and proposed to practice his profession elsewhere. He has been succeeded by Mr. F. H. Burt, a graduate of the Toronto College of Music, and highly recommended by the heads of that institution.

#### ACKNOWLEDGMENTS

I have once more to tender my thanks and acknowledgments for the kind interest and attentions shown to this Institution by the citizens and particularly the clergy of Brantford, and of which I have now had a pleasant experience for more than seventeen years. These evidences of friendship and goodwill it is always a pleasure to the staff, pupils and principal to reciprocate.

I have the honor to forward with this report the usual statistics, and to be,

Sir, your obedient servant,

A. H. DYMOND,  
Principal.

## REPORT OF PHYSICIAN.

T. F. CHAMBERLAIN, ESQ., M.D.,

*Inspector Public Charities, &c.*

SIR,—I take great pleasure in presenting my annual report as physician to the Institution for the Blind.

The health during the year ending September 30th 1898, has been exceptional and unsurpassed during any year of my medical supervision.

It is with the deepest regret that I find it necessary to report the demise December 21st., 1897, of Mrs. Plewes, one of the most accomplished and esteemed of our teaching staff. She died of an old standing trouble after severe suffering.

It is also my duty to record the death of a much respected employee in the person of Michael Shanahan, at the age of seventy years.

During the year there were in the months of January and February eight cases of measles and four of chickenpox, all of whom made perfect recoveries.

On December 22nd, 1897, one of the domestics was removed to the hospital suffering from a mild form of typhoid fever. She made a good recovery. One of the male employees is now convalescing from a low form of fever.

I have the honor to be, Sir,

Your obedient servant,

D. MARQUIS, M.D.

BRANTFORD, October 10th, 1898.

## LITERARY EXAMINERS' REPORT.

TO DR. CHAMBERLAIN,

*Inspector of Charities, &c., for Ontario.*

SIR,—We have the honor to submit for your consideration the following report of the results of the examination of the literary classes in the Ontario Institution for the Instruction of the Blind at Brantford, held on the 30th and 31st of May and 1st June, 1898.

The weather, throughout, was favorable and the season at least a fortnight in advance of seasons in the ordinary course. The grounds were at their very best, the scenery around the Institution delightful, and the trees, of which there is almost every variety, in the full flush of June.

The Principal had the kindness, during one of the mid-day recesses, to drive us through all the grounds and to direct our attention to their beauty. The shady avenues, the varied foliage, the numerous flowers in the strictly ornamental parts, and the park-like appearance of the whole, it would be hard to match anywhere. Within, everything was in the best of order, the class-rooms and corridors clean, the lighting and ventilation satisfactory, the management and tone good.

The results of the work in the classes were as follows :

*(1) Mr. Wickens's Classes.*

(a) Grammar.—Class B. Eleven pupils. Limits, etymology, analysis, parsing. This class is pretty uniform in attainments and does generally satisfactory work. The members were able to analyze readily such sentences as for instance,

“Heaven from all creatures hides the book of Fate,  
All but the page prescribed their present state,” &c.

The parsing too, was very well done.

(b) Reading.—Class A. Eleven members. Read in point print. Selection Macaulay's “Horatius.” Fluency, good expression, correct emphasis and inflection generally, characterized the reading. They seemed to know something about what they were reading.

(c) Arithmetic.—Class B. This is a very good class and has made excellent improvement during the year. Their work consists in mastering fractions, a very difficult subject to teach even to seeing pupils. By using devices suitable for mental work, Mr. Wickens has succeeded in getting the majority of his class to understand the different processes used in problems involving fractions. The class was given eleven questions which included all the different kinds of fractions and required a knowledge of the operations of addition, subtraction, multiplication and division of fractions. The result as shown by their answers was very satisfactory.

(d) Geography.—Class A. The class was examined upon Europe: the different races found there and the nations composing them, the languages, forms of government, religion, state of education, manufactures, imports, exports, and means of transportation of each country. Every principal city and town was found on the map and a description of it given. All the chief land and water divisions were pointed out, the position of each stated and everything of importance regarding it described. The examination was very satisfactory to all concerned.

(e) Writing.—Class A. The penmanship of this class is legible and in the majority of the specimens submitted very neatly done. To test their ability to put penmanship to a practical use, we gave them the following:

(1) A note of hand to be made by the student, the items being given by the examiner.

(2) A letter from the seat of war in Cuba.

(3) A bill of goods, the items being given.

The work was correctly done and showed a very fair knowledge of composition. The students were evidently well posted in current events and have their own ideas of public matters and know how to express them.

*(2) Miss Gillin's Classes.*

(a) Geography.—Class B. This class had studied the United States, South America, Mexico and the West Indies. These countries were taken in turn and the physical and political geography of each part very thoroughly examined. Eight pupils out of twelve answered every question perfectly. We were much pleased with the manner in which the subject had been taught. Dry details had to a great extent been avoided and comparatively useless and unimportant matters omitted, but all matters of importance and all facts necessary to give pupils a correct idea of the country had been taught by the teacher and acquired by the

pupils. From several years experience in examining the blind in geography we think a considerable part of their proficiency in this subject is due and may be attributed to the very fine dissected maps used.

(b) Canadian History.—The work assigned to the class is the history of Canada from 1492 to 1812. There are seventeen pupils in the class (15 boys and 2 girls). The examination was conducted chiefly along chronological lines, the pupils in turn, aided by questions, giving a narrative of the principle events, in the order of their occurrence. The result of the examination was eminently satisfactory. The pupils have obtained a very fair idea of their country's history, and have a very intelligent idea of the causes of the chief events and the characters and deeds of the leading men.

(c) Bible History. The class had studied this subject from the division of the two kingdoms to the close of the Old Testament. The class consists of twelve young men, who owe a very great deal to their faithful and able teacher for the amount of Bible knowledge she has been the means of imparting to them. All the monarchs of both houses were dealt with, briefly of course, and all the leading events in the reign of each referred to. The class had also studied the geography of the Bible as far as it referred to the parts embraced in the history, but time did not permit us to examine them on this part.

(d) Arithmetic.—Class C. 17 in number—1 absent, ill. The limits of this class are the tables of weights and measures and their practical application, problems involving analysis and some thinking. The class has six weak members. The balance solve practical problems with facility. The pupils had been taught to use their reasoning faculties.

(e) Grammar.—Class A. Eleven members—An intelligent class—Their limit: History of the English language, parsing, and analysis of simple and complex sentences.—They were examined briefly as to the history of the language, the changes effected therein and how these were done, the influx of foreign elements, the Latin, mainly through the church, the Norman French, through the church, the court, the aristocracy and the law courts, the Greek through the influence of scholars such as Erasmus, More and Colet and the subsequent cultivation of science and many foreign words through commerce. Nor was the Celtic Element which lends us so many household words and influences so powerfully the poets and poetry of England, forgotten.—In analysis and parsing Campbell's "Mariners of England" was chosen.—Especially the stanza beginning: "Britannia needs no bulwarks etc." Here the work was very well done—The answering generally was prompt and intelligent and reflected credit upon the class and the able and experienced teacher.

(f) Writing.—Class D. In number, sixteen. They write letters and simple sentences, and do the work satisfactorily—writing with considerable freedom for blind children and legibly.

(g) English History.—1154, the accession of Henry II to 1485, the end of, "The Wars of the Roses." This is a fine class of seventeen. One was ill and therefore, absent. The principal events of the most important epochs in that long interval were inquired into, the possessions in France, the later crusades, the invasion of Ireland, the Conquest of Wales the "Hundred Years," Scottish and "Barons Wars," and some of the chief constitutional changes. Touching the facts and events of the wars the answering was very good. They were not quite so well prepared on the constitutional points. There were however evidences of their having been well taught.

(h) English Literature.—A class of seventeen. No subject taught in the institution excites so much interest and emulation as this, and there is none that

is likely to be of more permanent value to the Students. The limits of the class this year were (a) History of American Literature from 1620 to 1861, (b) Midsummer Night's Dream and (c) Quotations from all above. On examination they showed a pretty satisfactory knowledge of the History of American Literature from Captain John Smith's and the Mathers' writings down to those of the men of the present day. As is known there is not much of value in American Literature prior to the Revolution. The class evinced some knowledge of Jefferson's and Franklin's works and of Alexander Hamilton, Otis Jay, and Madison, and other writers of the "Federalist" papers. Of Washington Irving, the historians, Prescott, Motley, Bancroft etc., of the principal novelists as Cooper, Hawthorne etc. and such poets as Bryant, Longfellow, Holmes, Lowell, Whittier, they were able to say much, but they had no knowledge of Poe though the "Ravens" and the "Bells" are so familiar. The wierd genius of the author seems to have had no attractions for them. They had a satisfactory conception of the plot and plan of "Midsummer Nights Dream," were able to give a synopsis of the play, and quote many of its finest lines and passages. Of the poets mentioned above they were able to give many specimens, but Whittier the Quaker poet was their favorite.

(2) *Miss Walsh's Classes.*

(a) Geography.—Class D. Two classes united—Limits: Ontario in detail counties, railroads, lakes, rivers, products, definitions.

The last they know accurately. Using the dissected maps they can tell you all about the counties, chief towns of each, lakes, rivers, islands, and take you over all the principal railroads pointing out the stations etc. much faster and more accurately than seeing children can. They are great at geography and are fond of the subject.

(b) Reading.—Class B. Fourteen members. Read from what is called the Sixth Reader Character of the reading above the average, expression good, emphasis usually correct. None got below  $66\frac{1}{2}$  per cent., of the assigned marks.

(c) Writing.—Class C. Twenty members. There too the work is satisfactorily done and calls for no further special comment.

(d) Arithmetic.—Class A. The class is made up of two divisions, a senior and junior. There are eleven in the senior class and five in the junior. They were examined together allowance being made in marking for the junior class. The examination consisted of percentage and its application to commission, brokerage, insurance, profit and loss etc. mensuration of surfaces, partnership and problems involving fractions, sharing, and questions requiring analysis. The class did very fair work as a whole. The most of the senior class did exceedingly well. The junior class, though not doing so well deserves much praise for the amount of work accomplished. The chief characteristic of this class is its thoroughness. The pupils have certainly been trained to be careful in details, omitting no step that should be taken, and thoroughly understanding the whole matter as they proceed. This training will certainly be of great value to them.

(e) Grammar.—Class C. There are seven boys and four girls in this class. They have done a good session's work, and have done it well. There is but little danger of praising this class too highly. The pupils were evidently enthusiastic in their work, and had studied beyond what is required from them. The answering was very prompt and the tone of the class excellent. In addition to a thorough grounding in the principle of grammar great care has been taken with their use of grammar. They speak with great correctness, and are able to detect and correct errors in grammar.

(*f*) *Physiology*.—The class is composed of twelve young ladies. They have been very carefully taught and have evidently taken much interest in their work. They were examined chiefly upon the nervous system, the special senses, the effects of alcohol and tobacco and how to prevent disease. A new feature in their work was or is "First aids to the sick and injured," including poisons and their antidotes. This part of their course has been taught in a very practical manner and cannot fail to be of great service to them. We were pleased with some incidental remarks from a few of the older pupils that showed how much the class appreciated the teacher's work.

#### 4. *Mr. McLean's Classes.*

(*a*) *Arithmetic*.—Class D. Ten seniors and fifteen juniors. Two of the latter are quite incapable. Limits: Definitions, tables, simple rules, easy problems and rapid work. The "seniors" did very good work and nine of the "juniors." The definitions and the tables they know accurately—easy problems in mental arithmetic they can solve with much facility and can apply the fundamental rules to practical uses as well as can be expected. The order and attention satisfactory.

(*b*) *Geography*.—Class C. Twelve members. Limit of work: Definitions and Dominion of Canada in detail. The class was examined pretty minutely as to the Dominion and provinces, their boundaries, chief cities, islands, capes, etc., as to their resources, railroads, canals, rivers, trade and commerce. The answers, under these several heads, were generally satisfactory, given with promptness and given willingly, showing that the members of the class had been well drilled by their instructor.

(*c*) *Natural History*.—This class (twenty-one in number) contains some defective children and some imperfectly acquainted with English. The teaching is objective. The objects, different kind of cereals, mammals, birds, etc. They readily select the different kinds of grain and nuts, tell where and how they grow, their uses, etc. Among the mammals and birds they have their favorites—of which the seal, kangaroo and flamingo are conspicuous. They describe as their hands move from part to part, with much minuteness the shape of the head, teeth, ears, nose, neck, body, legs, tail, claws, etc. This object teaching might be carried still further with advantage.

(*d*) *Bible History and Geography*.—Class B. Twenty members. Limit of work: Reigns of Saul and David and from creation to the end of Judges in review—giving ample room and range enough for the most ambitious. The principal epochs of the primitive and the mythological times were pretty well gone into and the answering was, as a rule, good.

(*e*) *Grammar*.—Class D. This is the primary class of the Institution in this subject. There are eighteen pupils in it. They were examined in the definitions, parts of speech and their reflections, correction of errors in grammar, and simple analysis. The average mark obtained by the class was eighty-two out of 100.

(*f*) *Reading*.—C. There are twenty-one pupils in this class. They read in four different books. Each pupil was examined individually and with considerable care, to test his ability to read any passage in his book by opening the book at random and having the pupil read more or less of that page: and also by placing the student's finger upon isolated words; this last is perhaps the best test. The great majority did very well. They were examined in spelling and meanings, in both of which they did very well.

(*g*) *Writing*.—B. The pupils were given short quotations, capitals and figures to write. The writing is very fair, and shows considerable care has been taken with them.

5. *Mrs. Murray's Classes.*

(a) Reading.—D. This is the primary class in this subject. The pupils are graded into three divisions according to their advancement. The majority of the class read with considerable expression and are evidently fond of reading. Their ability to distinguish words of similar form was very marked. Several such tests were given to each pupil and in nearly every instance the correct answer was received. The pupils evinced in every case a determination to succeed and when their answer was pronounced correct would brighten up and attack the next difficult word with a zest that was very pleasant to see. A good foundation has been laid for good reading. Their spelling was very correct.

(b) Arithmetic.—E. The senior division of this class was examined in addition, subtraction and multiplication. They were able to multiply up to twelve times twenty. Ten problems involving the use of these rules were given to the nine little ones. One answered all; another, nine; three others, eight each; the rest answered seven each, a very good evidence of careful teaching.

(c) Kindergarten.—The class is made up of nine boys and nine girls. We examined their folding, weaving, and some of their moulding in clay, all of which is very creditable and will compare very favorably with that of seeing children. The teacher gave the children a short lesson on one of the gifts. Their answering was good. We then had a couple of K. G. songs, which were sung better than by the average of such classes. The Kindergarten is in many of its departments well adapted for the blind, giving them ideas of form and beauty that could not be obtained in any other way; besides this the songs and plays and indeed the whole tone of the Kindergarten seem as specially suited for young blind children as they are for seeing pupils.

Physical Culture.—We cannot close this report without some reference to the Physical Training Department of the Institution, which is under the management of Mr. P. J. Padden. We witnessed the marching and calisthenic exercises of the girls, many of them approaching womanhood, and nothing could be better or more gracefully done. They enjoy the drill, the importance of which needs no comment. The tumbling, parallel bar performances, swinging, etc., of the boys were excellent. The food and feeding of the inmates are matters of great importance and we have had opportunities of knowing that this Department is well looked after by the careful and conscientious Matron, Miss Dunn. We have to thank the Principal and members of his staff for the many courtesies extended to us during the examination.

Respectfully submitted,

M. J. KELLY,

WILLIAM WILKINSON,

Examiners.

BRANTFORD, 12th July, 1898.

REPORT OF MUSICAL EXAMINER.

HAMILTON, JUNE 1ST, 1898.

TO T. F. CHAMBERLAIN, Esq., M.D.,

*Inspector of Asylums, etc., Toronto.*

SIR.—Having as desired revisited the Brantford "Institution for the Blind" and personally examined all the music classes, I have again to report a satisfactory result.

The regretted death of Mrs. Plewes—a most satisfactory teacher, and estimable lady—has involved a new appointment, and Miss Crompton is now filling her place, this being the only change in the Faculty. Mr. Morris has continued in sole charge of the organ and vocal classes (numbering respectively five and sixty), Miss Moore of the theoretical and musical history classes (numbering thirteen pupils) while the sixty piano pupils are divided among the three teachers. Good progress is shewn in all, but the inevitable disadvantages attendant on loss of sight are less felt in the study of the organ, theory, and vocal music than in the study of the piano.

It is to be remarked, however, that in all the pupils—even among the youngest—there is a greater capability in the study of music of involved construction than is common among seeing pupils.

Those who are blind may go over less ground, but they go over it more carefully, and there is a compensating advantage in the concentration of thought which is compelled by their method of memorizing from point print. They gain in exactness as they lose in fluency.

There is certainly no endeavor in this Institution to create star pupils, for all seem to receive equal attention, the more brilliant pupils obtaining no advantage at the expense of the less promising, and though of necessity, there is a wide divergence in results, many of the latter have made far better progress than would have been expected from them.

There may be but few possessing sufficient talents and energy, to over-ride their disadvantages in professional life, but some have done, and more give good promise of doing so. Mr. Willie Wells (whose untimely death last year was sincerely mourned by all that knew him) was an example of the first class, and others following in his footsteps are now fighting their way to the same goal. Of course, those possessing any power of sight, however imperfect, stand at great advantage.

The affiliation of the Institution with the Toronto College of Music affords an opportunity of testing the progress of students by an accepted standard, and one male pupil succeeded in passing the regular examination in theory of the Toronto Conservatory of Music last Fall, his only instructor having been Miss Moore of the Institution, and I have no question there are others who can achieve the same success if they so desire.

In the vocal classes, the result of the year's work is very satisfactory. Everything is thoroughly memorized and several part songs were admirably sung by the senior class, the Haydn Chorus "The Heavens are Telling" with one student at the organ and four more at two pianos as accompanists, being especially effective.

The junior class also sang several part songs, very pleasantly, interspersed with solos and duets. Among the solo singers was the child mentioned last year, as possessing an intuitive knowledge of absolute pitch, who though at present lacking physical strength to accomplish much gives good promise for the future.

The gymnasium still gives undeniable evidence of its educational value, in the physique of the students.

Of the chapel music it can only be said that it continues what it has always been, a model of congregational singing, principally in unison.

As upon other occasions, I have to thank the Principal and all with whom I have come in contact for their kindness and willingness to assist me.

I am, Sir, yours respectfully,

R. S. AMBROSE.

# THE INSTITUTION

FOR THE

# EDUCATION OF THE DEAF AND DUMB.

---

In submitting the Twenty-Eighth Annual Report upon the operations of this Institution it is gratifying to note the great progress that has been made in the methods of imparting knowledge to the deaf and dumb during the past few years. The various methods of training now in use, which are fully described in the excellent report of the Superintendent, when compared with the system adopted in the early years of the Institution, show the great advantages the pupils now enjoy in fitting them for the duties of life.

The industrial improvements of late years have kept pace with the literary work. The introduction of the printing press has afforded the means of training many of the pupils in the art of printing, enabling them to gain a livelihood at the trade after leaving the school. And in the carpenter shop, shoe shop, and bakery a number of pupils have been thoroughly qualified to work at those trades.

The female pupils, in addition to their literary work, are instructed in fancy work, general sewing, dress-making, laundry and house work.

## RECOMMENDATIONS

The want of more school accommodation has become very urgent, as well as a play-room or gymnasium for the physical development of the pupils. I beg to recommend, therefore, the erection of a building to meet these requirements. I have also to recommend that the number of years for the course of tuition be increased, and that a compulsory law be enacted requiring the attendance of all deaf and dumb children in the Province. Admission to the Institution should be free to all such children residing in the Province of Ontario.

The attendance during the past year has taxed the full capacity of the Institution. The number now on the roll is 260—144 boys and 116 girls. Thirty of these are new pupils who have entered during the year. Four of the older pupils did not return, owing to their parents leaving the country. Quite a number graduated at the close of the session.

The health of the inmates of the Institution has been uniformly good during the year, only one death having occurred, as will be seen by the report of the attending physician, Dr. Eakins.

There have been more changes than usual in the staff of teachers during the year, four or five having resigned and others employed to fill their places. The staff of teachers and officers is now complete, and fully up to the standard of past years in every respect.

All departments of the Institution have been conducted satisfactorily. The pupils take a delight in their work and seem desirous of obtaining all the information possible to fit them for their future career. The officers, teachers and instructors take a deep interest in the welfare of the children, and are zealous in the performance of their duties.

The report of the Inspector of Public Schools on the literary work done by both teachers and pupils is very satisfactory and may be read with interest.

Owing to the extreme dryness of the season, the returns from the farm and garden have not been so large this year as in the previous year; though the hay, oats and grain produced will be sufficient for feeding the stock during the winter.

The usual improvements and repairs to buildings and grounds were made during the past summer.

It will be seen by the Superintendent's report that the usual attention has been given to the moral and religious instruction of the pupils. He also gives detailed statements of the nationality, religion and place of residence of the pupils, as well as other information concerning the general management of the Institution.

The average attendance of pupils during the year was 268, and the per capita cost was \$167.50, which is much below that of any other institution of the kind either in Canada or the United States.

The success which the Ontario Institution has attained in educating the deaf and dumb is largely due to the educational and administrative ability of the Principal, Mr. Mathison, and his tact in surrounding himself with an efficient staff of teachers and officers. His election as Vice-President of the Association of American Instructors of the Deaf and Dumb, which held its session this year at Columbus, Ohio, is a mark of the high esteem in which he is held by the Association as an instructor of deaf mutes.

In the minutes of my inspection will be found details as to the condition of the buildings, grounds, management, etc. I found the Principal, officers, teachers, instructors and employees most willing at all times to render me every assistance in the discharge of my duties as Inspector, for which they have my sincere thanks.

## INSPECTIONS.

My first official inspection of this institution for the current year was made on the 1st February. There were in residence on that date 272 pupils—150 boys and 122 girls.

The work of the session appeared to be going on satisfactorily, due attention being given both by the teachers and pupils to the course of studies in the different class rooms.

The institution was found to be in good order in all its departments. The dormitories presented a neat and tidy appearance: the class-rooms, dining-rooms, chapel, principal's and bursar's offices, stores department, etc., are all in well kept order, also out buildings, farm stock, etc., etc.

I inspected this institution on the 26th September. On that date there were 260 inmates (142 boys and 112 girls), and six still to be admitted. The school having opened the previous week, the teachers were busily engaged in reorganizing the classes, which contained from sixteen to twenty pupils in each.

The children were all looking well after their summer vacation, and the teachers were all at work, with the exception of one who had not yet arrived. Two or three changes have taken place in the teaching staff since my last inspection.

The interior of the building has been thoroughly cleaned and renovated, and the necessary repairs in plastering, painting, etc., have received attention during vacation.

The Superintendent's office, Bursar's office, storekeeper's department, workshops, farm buildings, were all found to be in satisfactory order. The products of the farm have been somewhat less this year than usual.

The hospital in connection with the institution has been much improved, and is kept in readiness for any emergency that may arise.

There were quite a number of new applications for admission this session, but owing to lack of accommodation it was impossible to receive the applicants.

REPORT OF THE SUPERINTENDENT OF THE ONTARIO INSTITUTION FOR THE DEAF AND DUMB.

BELLEVILLE, September 30th, 1898.

DR. T. F. CHAMBERLAIN.

*Inspector of Prisons, etc.,*  
Toronto, Ont.

SIR.—I have the honor to submit the Twenty-eighth Annual Report of the Institution for the Deaf and Dumb, for the year ending the 30th of September, 1898.

*Combined System and Oral Methods.*

In previous reports I have mentioned the various methods employed in the education of the deaf, and pointed out the advantages and characteristics of each, and I have also tried to indicate what the limitations and capabilities of the deaf really are: but I find it necessary to again advert to this subject, and I propose to fortify my position by reference to the highest authority—in order to correct some current misapprehensions, and to save from probable disappointment many parents of deaf children who have set their hopes on a certain ideal in education, which, as regards a majority of the deaf, is quite impossible of realization.

There are two kinds of schools for the deaf, the exclusively oral schools, where an effort is made to teach speech and articulation to all the pupils, and the combined system schools, in which all useful methods are employed, articulation being taught to such as are capable of speech, and the manual method being used for the instruction of those to whom speech is impossible of attainment, or both methods being employed in combination where that plan seems to be the most advantageous. The contest between the advocates of these two methods has been waged with vigor for many decades, but, on this continent at any rate, the victory unmistakably rests with the supporters of the combined system. I submit herewith, relative to the comparative merits of the two methods, the testimony of E. M. Gallaudet, Ph.D., LL.D., President of Gallaudet College for the Deaf, at Washington, D.C., U.S.A., and doubtless the ablest and most successful instructor of the deaf in America, or in the world. Dr. Gallaudet advocates the combined system, not as a partisan with pre-conceived views to maintain, but from a firm conviction of the superiority of that system, a conviction formed only after exhaustive and conscientious research, for the purpose of which he has twice visited all the leading institutions for the deaf in America and Europe. Dr. Gallaudet thus states the sources of his information and the reasons for his conviction:—"It has been my privilege to be associated with this class of people for more than forty years as a teacher and as an observer. I have examined the methods pursued in more than two score of the schools for the deaf in this country, and in a greater number of schools in thirteen of the countries in Europe. I have taken careful note of the results of every method which has been made use of in every place that could be reached by travel. Within a year I have had unusual opportunities for meeting in personal converse, large numbers of educated deaf persons not now in school, in Italy, Switzerland, Austria, Germany, France, England, Scotland and Ireland. From these persons, whose testimony was from their own experiences, I was able to learn much of value as to the

results and relative advantages of the different methods of education, and my intercourse was by means of a language more truly world-wide than Volapuk will ever be—the natural, ideographic language of gestures, no doubt the oldest known to man, but whose antiquity is by no means a synonym of decrepitude, inexactness or decay. For, in the use of this unique means of expression, mind comes in more direct contact with mind than when the barriers of arbitrary and artificial language is interposed.”

The methods employed in the education of the deaf and the objects and relative advantages of each are thus presented by Dr. Gallaudet: “There are three quite distinct methods in general use at the present time: the Manual, the Oral and the Auricular, which I have named in the order of their adaptability. That is to say, all deaf-mutes can be educated by the manual method; and only a small proportion by the auricular. The last named, as will be easily understood, is employed only with those who have more or less hearing. Hearing tubes and other appliances for helping defective audition are made use of. In the seating of a class, those with the most hearing are placed farthest from the teacher. Children who possess sufficient hearing to be educated under this method have either had the power of speech before becoming deaf or acquire it easily through the aid of their hearing. Such children, after a reasonable term in school, cease to be deaf-mutes in any sense, and should be enumerated in the census as persons “hard of hearing.” Under the Manual method no attempt is made to impart the power of speech to those who lack it, but through the aid of the language of signs the manual alphabet and writing the intelligence of the children is awakened and developed, and a full command of verbal language is given, and the door is opened to as complete a grasp of the curriculum of school and college as is possible to children and youth in possession of all their faculties. All the deaf without exception may be educated by this method, the only limitations being their lack of purpose and industry, or of mental capacity. There are teachers of the deaf who do not hesitate to claim that all the deaf may be educated under the oral method, but my experience makes it impossible to me to admit the justice of this claim. No question connected with the education of the deaf has received more careful or prolonged investigation at my hands than this. And the reason why zealous and enthusiastic teachers are misled is not far to seek. Repeatedly in visiting oral schools and oral classes I have asked that all the pupils in a class be allowed to read aloud to me from a book with which they were familiar, but of the contents of which I was ignorant. Such tests have invariably disclosed the following conditions: Certain of the children I would understand fully, others only partially, and quite a proportion not a single word. At my report on these last the teachers would express great surprise and say: “Why, I understood every word,” quite oblivious of the fact that the daily intercourse of the class room gave a meaning to what to a stranger was gibberish. The proportion of children in an oral school where all classes of the deaf are received, who would be stamped as failures under such a simple test as I have described, is by no means small. And to them must be added others whose failure would be less marked, but whose success would be so limited as to suggest plainly the inadequacy of the method pursued. In determining, then, the matter of methods, shall it be said that because only a small portion are capable of success under the auricular method, and a larger portion under the oral, those two methods should be abandoned and the manual alone employed, because under it alone all the deaf can be educated? Surely this course would be far from wise; and, happily, a solution has been reached in the leading schools of our country which is at once scientific, practical and in harmony with sound principles of pedagogy. The capabilities of each child are carefully tested—often by prolonged trial—and that method applied

which is suited to the peculiarities of each case. If an amount of hearing is found, above a certain minimum, the child is taught by the auricular method. If promising success in speech is gained the oral method is chosen; and where such success is not attained the manual method is resorted to. By this process, in a large school, the capacity and lack thereof of every child may be considered and humanely met, and a system of education carried forward broader than any single method and infinitely more elastic. This combination of methods is known in the terms of our professional vocabulary as the Combined System, and at this time nine-tenths of the deaf children of the country are being educated thereunder. In the light of the present experience, a school for the deaf which limits itself to the employment of a single method, must be regarded as inadequately equipped for doing the work that may properly be demanded of it. This is the severe yet just criticism brought against German schools as a whole by eight hundred of their graduates in their petition to the Emperor for freedom. No success in individual cases, nor in schools of selected pupils; no enthusiasm of well-meaning teachers nor of others less honest should be allowed to mislead the public as it has often done in this matter.<sup>7</sup>

Dr. Gallaudet further sets forth the advantage of signs and the limitations of pure oralism as follows:—"It is possible to teach a child born deaf to speak well, and to understand the speech of others by observing the motion of their lips. This has been done in many instances in many countries. But the conclusion often drawn from such successes, that all deaf children may do likewise, is not sustained by experience. Success in teaching deaf mutes to speak is a matter of gradation, and in estimating the value of results, enthusiasm and bias on the part of the teacher often lead to serious error. A large proportion of deaf children whose teachers assure them they have acquired the power of speech, and who can use their voices, such as they are, with considerable fluency, are conspicuous failures as speakers in the world at large. The utterance of these, understood easily by teachers and intimate friends, is often so muffled or harsh and imperfect as to repel strangers, putting the deaf person at a much greater disadvantage than if, remaining silent, he resorted to writing as a means of communication. The testimony of the intelligent, educated deaf-mutes I met in Europe last year was unanimous and emphatic on this point, and they declared most earnestly that the practical value of speech, to many of their number, when they come to engage in their life work in the world, was greatly overestimated by their teachers. The expression of this view was especially positive in Germany, where the oral method has prevailed exclusively, and where quite recently a petition, numerously signed by educated deaf persons, has been presented to the Government, asking that the sign language be made use of in the schools of that country, and that instruction under the oral method be not continued with those whose success in speech is only partial. Teachers of the deaf in Germany are coming to the support of these views as to methods, although only a few have dared to express their opinions openly. But there is reason to believe that a resolution has begun that will before long bring German schools for the deaf into harmony with the great majority of the schools in America, where, happily, a combination of methods is effected under which the capability of each pupil is carefully estimated, and that method employed which will be most helpful to the child. There are teachers of the deaf in the United States, who have urged within the past few years that the language of signs ought not to be used in teaching deaf-mutes, and in a few schools attempts have been made to carry out this idea. It is indeed possible to teach deaf children without the use of the language of signs in the class-room or the public assembly. But the testimony of great numbers who have been so taught, is that their intellectual development has been narrowed

and retarded by the refusal on the part of their teachers to make use of that language which is theirs by nature. My experience with the deaf, and my life-long familiarity with their peculiar language, lead me to accept this testimony as the statement of a general truth, and to express the hope that the day is not far distant when the natural language of the deaf will have its proper place in every school, as the German deaf-mutes demand, and as many German teachers recommend. The denial of the use of the language of signs to the deaf while in schools, takes away one source of keen enjoyment and valuable instruction they can ill afford to lose, and which cannot be secured to them in any other way. This is the giving of lectures and addresses to the whole body to pupils in a school. We who hear know what pleasure comes from listening to an eloquent earnest speaker, how the attention is absorbed and the feelings are stirred. There is but one way of imparting this pleasure to the deaf in equal force and measure as it comes to us through sound. This is by employing the natural God-given language of the deaf, developed as it has been in our country through many years of cultivation and use. I am aware that it is claimed for deaf lip-readers that they can attend church, and public lectures and the theatre, understanding what is said as well as those who hear. That a few of the most expert can approximate to this, under conditions quite impossible to a considerable number assembled in one place, is not denied. But nothing is more certain than that it is impossible for any large proportion of, say two hundred deaf persons, assembled in one place to be addressed orally. With the substitution of the manual alphabet for the language of signs, the conditions are perhaps less unfavorable. But the eye-strain is so much greater, the radius of vision so much smaller, and the power of expression so much restricted and diminished, that the advantage lies greatly with the employment of the language of signs.

“Thinking that the question may arise in the minds of some, ‘Does the sign language give the deaf, when used in public addresses, all that speech affords to the hearing?’ I will say that my experience and observation lead me to answer with a decided affirmative. On occasions almost without number, it has been my privilege to interpret through signs to the deaf, addresses given in speech. I have addressed hundreds of assemblages of deaf persons in the college and in schools I have visited, using signs for the original expression of thought. I have seen many more lectures and public debates given originally in signs. I have seen conventions of deaf-mutes in which no word was spoken, and yet all the forms of parliamentary proceeding were observed and the most earnest and even excited discussions were carried on. I have seen the ordinances of religion administered and the full service of the church rendered in signs, and all this, with the assurance growing out of my own complete understanding of the language, a knowledge which dates from my earliest childhood, that for all the purposes above enumerated, gestural expression is in no respect inferior, and is in many respects superior, to oral verbal utterances as a means of communicating ideas. Before turning to another subject, I wish to say to the friends to any deaf persons, whose teachers in their zeal to give them the power of speech may have rejected the language of signs, as a means of instruction, and may have advised their pupils never to learn nor to use it in a vain ambition to make them “just like hearing people,” that by such a course they have subjected them to a lifelong deprivation which can hardly be measured, the cruelty of which remains in spite of the fact that it was intended as a kindness.”

I have quoted thus liberally from Dr. Gallaudet because I am so strongly impressed with the importance of parents of the deaf being made fully cognizant of the best opinion, and what may now be considered the established verities, relative to this matter. It is naturally the strong desire of every parent that his

child should be taught speech and lip-reading, and I am continually in receipt of letters urgently requesting that pupils be placed in the oral classes who are quite incapable of being taught to articulate clearly. I regret that this is the case. We would gladly teach every boy and girl to speak, but it cannot be done; and it would prevent a great deal of trouble and many grievous disappointments and blight of hopes if parents of the deaf would thoroughly inform themselves on this subject and understand just what is possible of accomplishment in this direction. Oralism has been given a thorough test by the ablest teachers, under the most favorable conditions, and along the lines of the most scientific principles, and its capabilities and limitations are now fully known; and it may be safely asserted that not ten per cent. of deaf children can ever be taught to articulate with sufficient freedom and distinctness to be of any practical utility to themselves. Of the 70 public schools for the deaf in Canada and the United States, 63 use the Combined System and the seven pure-oral method: in the former there being 9,056 pupils and in the latter 572; or, including all schools for the deaf—public, private, denominational and day—out of 10,484 pupils, 9,521 are in Combined System schools and 963 in Oral schools, and this is eloquent testimony as to which system is most in favor, and as to the impossibility of teaching speech to all the deaf. Of course, however, a considerable proportion of those in the Combined Schools are taught articulation. Some private schools do very good work in pure oralism, because only very bright pupils, who show some aptitude for speech, are admitted; but it is quite impossible in public schools, where pupils with all grades of ability are in attendance, to teach speech to even a considerable number of them. This at least is the conviction of nearly all the best teachers of the deaf in America. In Germany, also, where the exclusively oral method has long been used, there is a powerful revulsion among the deaf and instructors of the deaf against its continuance, and there is every indication that the Combined, or Rational System, will soon be adopted there. Edward Walther, director of the Imperial Institution at Berlin, one of the most prominent instructors of the deaf in that country, and a supporter of the oral method, says in a recently published utterance: "We must openly and candidly confess that all we can do is imperfect work. What nature has lavishly bestowed on the hearing person, we cannot give to the deaf-mute. We cannot bestow on him a power of speech which in clearness, euphony and extent, approaches that of hearing persons. We cannot give him a means of understanding the speech of others, which is anything more than a meager substitute for hearing."

In England also, where the Oral Method has for a long time been chiefly in vogue, there has set in a strong agitation in favor of the Combined System. Relative to this subject, the following from an editorial in a recent issue of *The Silent Messenger*, one of the leading journals published in Great Britain, says: "The accounts which reach us from time to time of the results attained under the 'German' or pure oral method in the day schools for the deaf in Great Britain are far from encouraging to those who have the best interests of the deaf at heart. The only hopeful sign is the frequent complaints which are being made by parents and friends of the pupils and by the adult deaf and dumb. We have heard it said that the general education given in many of these schools is meagre in the extreme, while the attainments of the pupils in speech and lip-reading are of little, if any, practical value. This is a serious indictment against a method which claims to 'restore the deaf to society and put them in full possession of their lost inheritance.' Yet, from all we can gather, it seems plain that in far too many instances pupils leave school unable to communicate their thoughts freely to those with whom they come in contact in the outside world. It cannot be too often repeated that what is shown in the school is no true test.

The value of an accomplishment can only be measured by the possessor's ability to use and depend upon it in everyday life. Judged by this standard—the only one on which reliance can, or should be placed—the evidence is strong enough to ensure conviction in the minds of many friends of the deaf that the oral method—in day schools at any rate—far from accomplishing the restoration of the deaf to society, is wholly unable to meet the demands made upon it in the religious, social and business life of a world that has no theories to support. Outside the school, the speech and lip-reading from which so much was expected withers like the grass, the flower thereof falleth and the grace of the fashion of it perisheth. Such is the picture presented to us by those who are in a position to know the truth. This is a grievance which has long appealed with peculiar force to the more fortunate members of the adult deaf community whose education has not been so satisfactorily conducted, and we are pleased to learn that in Bradford a committee of the adult deaf and dumb have made a forward move which greatly redounds to their credit. The class which does not complain is the class that will go to the wall. So said the present Prime Minister a short time ago when replying to a political deputation, and the lesson he inculcated is one which the deaf of Bradford have evidently laid to heart. The resolution which they have passed states that they 'record with regret the very low standard of education of deaf children as taught by the Bradford School Board and acquired during the past twelve years' trial of the oral method of instruction; their almost total inability to make themselves understood by and to understand the general public; also their inferior intelligence and knowledge as compared with deaf children taught on the combined system.'

It is important further to note that pure oralism has failed in the practical test, that among the educated deaf, even of those taught by this method, the testimony is almost unanimous to the effect that they find great difficulty in making themselves understood, and that the deaf man who has no other method of communication is at a great relative disadvantage; and so well do the deaf realize their inability to articulate clearly and to modulate their voices agreeably that a large majority even of those who can speak fairly well are very reluctant to do so in the presence of hearing people.

The Combined System is the one in use in the Ontario Institution for the deaf. That means that both the oral and the manual methods are used. We believe the sign language is the natural language of the deaf, and that every deaf person should be expert in its use. Instruction is given every pupil, chiefly through writing and the manual alphabet, with signs as an accessory aid. In addition to this all those pupils are taught speech and lip-reading who are deemed capable of acquiring these accomplishments. Every child coming to the Institution is carefully examined and tested, and all who manifest any aptitude for speech are placed in the articulation classes. Parents may rest assured that every child will be taught to speak who has a capacity therefor to the degree of practical utility. But we deem it time totally wasted to endeavor to teach articulation to those to whom clear vocalization is an impossibility, and unfortunately they comprise a large majority of the deaf. Parents no doubt find a sentimental pleasure and satisfaction in hearing their deaf children able to articulate even a few words, but deeming it our duty to promote to the very best of our ability the highest welfare of our pupils, it is impossible for us to allow such merely sentimental considerations to influence or alter our methods of instruction. We do not for a moment underestimate the value of speech to such of the deaf as can successfully attain unto it. It is an inestimable boon to all such, grand in its conceptions and miraculous in its achievements. But this benefaction is only for the few; and in our determination to do our duty to our

pupils we must in future, as we have in the past, lay aside all merely sentimental considerations and unattainable ideals, and make it our supreme purpose and endeavor to give them, during their all too brief school career, such instruction and mental training as will be of most practical benefit to them in after years, and will best enable them to earn a competent livelihood and to discharge honorably all the duties of life in their religious, business, social and domestic relations.

#### CONVENTION OF THE ONTARIO ASSOCIATION FOR THE DEAF.

The sixth biennial convention of the Ontario Association of the Deaf was held at Grimsby Park on June 16th to 19th, and was in every respect a most interesting and successful event. There were some 175 members of the Association present from all sections of the Province. A good programme was presented, consisting of prepared papers and impromptu addresses on various subjects. The following topics of addresses will give some conception of the character and variety of the proceedings: "How to Manage a Business"; "The Inner Experiences of the Deaf"; "The Necessity for an Itinerant Religious Instructor for the Deaf"; "The Fruits of Mental and Spiritual Culture." Many of the addresses were followed by animated and instructive discussions, which elicited many valuable and suggestive ideas. On Sunday impressive and profitable religious services were held, consisting of addresses, reading of the Scriptures, signing of hymns, etc. Such a gathering as this is an eloquent tribute to the benefit of an education to the deaf, and also a striking testimony to their industry, thrift and high degree of moral culture. All those present are earning a good livelihood and enjoy the respect and esteem of employers and all with whom they are associated; and these were but fairly representative of all the deaf in the Province. It is a source of very great gratification that, as far as I am able to ascertain, not more than half a dozen deaf persons in this Province can be classed as paupers and none as criminals, a splendid justification, truly, for the provision made by the Government for their mental and moral training at this Institution. It is difficult to overestimate the pleasure and profit derived by the deaf from these conventions. Many old friendships are thereby renewed and many new ones formed; many matters of mutual interest are discussed, many difficulties are cleared away and fresh encouragement and added stimulus and renewed zeal are imparted. There is a great deal of dreary monotony and depressing isolation in the lives of many of the deaf, shut out, as they are, from the world of sounds and knowing naught of the delights of harmonious melody, or the sweeter music of the human voice thrilling with the accents of love, vibrant with intense feeling or tremulous with sympathetic emotion; and to them, to an extent impossible for the hearing to realize, these periodical gatherings are as "wells of water in a weary land," which they look forward to with eager anticipations, participate in with keen enjoyment and afterwards dwell upon in memory with fond recollection.

## ASSOCIATION OF AMERICAN INSTRUCTORS OF THE DEAF.

The triennial meeting of the Association of American Instructors of the Deaf, was held in Columbus, Ohio, on July 28th, and following days, and was conceded to have been the most interesting and helpful Convention in the history of the Association. This is the most important gathering of the kind in the world in numbers and influence, and it has rendered invaluable service in the cause of deaf-mute education. There were nearly four hundred teachers present, including visitors from England, Scotland and Ireland: and it would not be too much to say that the members of this Association, in the degree of intellectual culture, in enthusiastic zeal, in their love for and devotion to their work, in their careful study and understanding of the psychology of their pupils, and in their diligent search for and successful application of the best scientific principles of education, are unsurpassed by any other body of educators on this continent: while the results attained in surmounting what not long since were regarded as insuperable difficulties in the way of the education of the deaf are the crowning glory of modern educational efforts. The acme of achievement in this direction was strikingly exemplified by the presence of two young persons, who are both blind and deaf, one of whom, Linnie Haguewood, though her education did not begin till three or four years ago, is making astonishing progress in the use of language and in the ordinary branches of study, is an expert and accurate typewriter, and is developing in beautiful and accomplished womanhood. The other, Clarence Selby, a young man of 26, has acquired a good education and is a graceful and facile writer, having written an interesting history of his own life, and composed several poems of no small merit. Surely no other triumphs the teacher's patient effort and prevailing skill can compare with these. The sessions of the Convention lasted several days, during which many very interesting and timely papers and addresses were given, from which, and from the subsequent discussions, many valuable ideas could be gathered. Every effort was made to render the proceedings of as great practical utility as was possible, several of the teachers having brought pupils with them to illustrate their methods of instruction. This Institution was perhaps as well represented at the gathering as the average of the schools in the States: but it is to be hoped that in the future every teacher, unless unavoidably prevented, will make it a point to attend. Such an opportunity as this should be utilized, not as a perfunctory duty but as an invaluable privilege. The benefit to be derived by teachers from such a meeting as this are very great. There they come into contact with their most successful fellow-workers from all parts of the world, with opportunity for the free interchange of opinions relative to the best methods of overcoming difficulties and attaining the best possible results in the class room; and thus can be gleaned the best thought evolved from the richest experience of the most successful instructors of the deaf. I believe our staff and our Institution will compare favorably with the best in America, proportionate to our facilities, the size of our classes, etc. This, however, does not imply that we have reached perfection in methods or the greatest possible attainments in results; and there is no teacher, here or elsewhere, no matter how long he has been in the work, or what measure of success he has had, who cannot find plenty of room for improvement, who cannot gain valuable and helpful ideas and suggestions from others. That teacher has quite lost his usefulness who thinks he knows all that is to be known of his profession, or who thinks he cannot learn from others. Constant confinement to work such as ours has perforce a narrowing tendency, and the best of teachers are apt to get into ruts and to be content year

after year to drift along in the beaten path of the past. It is very essential for teachers, who wish to keep abreast of the times, to be conversant with the best thought of their profession, and to realize adequately the greatness and importance of their avocation, to come into frequent and intimate contact with their fellow-instructors: and the result must inevitably be the broadening of their outlook, the stimulative of their zeal, the re-kindling of their enthusiasm, and the maintenance of a wholesome esprit de corps, all of which will be of direct personal advantage to themselves and will assuredly increase the efficiency of their work in the class room. Previous to the general sessions of the Association a meeting of Superintendents and Principals of the Institutions in Canada and the United States was held for the discussion of matters pertaining more particularly to the executive management of schools for the deaf. I wish, on behalf of myself and of those of my staff who were present, to acknowledge the many courtesies extended to us in Columbus, and especially the compliment paid to Canada and to the Ontario Institution by the election of myself as vice-president of the Association.

#### THE SLOYD SYSTEM.

We have a number of lads who are too young to commence learning a trade in the regular shops: there are others who are not likely, after leaving school, to follow, as a means of obtaining a livelihood, the trades taught at the Institution. To all such the Sloyd System of Manual Training would be of great benefit by enlarging their interests and outlook, and enabling them to find their right vocation by learning by doing. I have been studying up the Sloyd System of late, with a view of introducing it here, with your concurrence. For information and ideas concerning it I am indebted to Mr. C. Hanford Henderson, of Philadelphia, who has given the system persistent attention and a successful trial. "Manual training in America is about a quarter of a century old and the term 'manual training' has come to mean many things to many people. There are two distinct systems of manual training—the Russian and the Swedish. The Russian system originated in the technical schools of Moscow. Some of the work done in these schools was shown in Philadelphia, at the Centennial Exhibition in 1876, and attracted a good deal of attention. The movement in America dates from that time. The Russian work is purely technical. It consists of abstract exercises in wood and metal, and was designed simply to impart mechanical skill. Before the introduction of manual training the technical students had to gain their skill of hand by going directly to the industrial establishments. Manual training teaches no specific trades, but aims to give a knowledge of the principles underlying all trades. Literally, it means hand training. It teaches young men the principles and practice of carpentry, pattern making, wood carving, blacksmithing, vise work and machine construction, and it does it more thoroughly and in far less time than is possible to do it in the manufactories themselves. The models are not finished articles, but are simply practice pieces intended to embody general principles in both wood and metal working. The aim of the Russian system is industrial, and its teachers are generally artisans taken directly from the workshop. Another system of manual training has been growing up in Sweden, and had come to be known under the name of Sloyd, a word meaning 'handy' or 'dexterous.' It was an outgrowth of the old peasant system of home handiwork, and like the kindergarten it sprang up in the lower schools as a purely educational movement. It employs only finished articles for its models, generally some simple domestic article that may be given to the father or mother and may find practical service at home. The work is largely free-hand, and much of it in the lower grades is done with one tool—the sloyd knife. It is also

a system of gymnastics, since all the work is planned to bring about the physical and artistic development of the children as well as their skill of hand. In its freer movements and its artistic purpose Sloyd stands toward the Russian manual training somewhat as free-hand drawing does towards mechanical." Manual training is no longer experimental. It has been tried and found good, and this success has been the means of extending it to schools generally, and in some of the large cities of the United States this has already been done. The Sloyd system is suitable for all grades, and I see no reason why a scheme of manual training in wood and clay, such as Sloyd, in addition to the shops we have already, should not be introduced into our Institution. The cost of equipment would not be very great and is quite within our reach. A Sloyd work-bench with tools will cost from \$18 to \$25. A room with ten or twelve benches, and other fittings, would be about \$500, and this equipment would last for years. We have a room, a part of our carpenter shop, well lighted and suitable in every respect, which could be utilized for the purpose. Three or four classes of ten or twelve could be taught for a couple of hours each week, and from thirty to forty of our boys could receive instruction after the regular school hours. Children who are properly occupied and interested are not generally disorderly. The exercise would be beneficial and make those so engaged keener and brighter in their other studies.

#### INDUSTRIAL DEPARTMENTS.

The work in the industrial departments has been going on much about the same as in former years. In the Printing Office the instructor reports favorably on all the pupils under his charge. They have made as good progress as could be expected in the time they were in the office. Several of the pupils had made such progress that with a little more instruction they would be able to take a position in an ordinary printing office and give satisfaction to their employer. The instructor in the Shoe-shop says: "I am pleased to say that the progress made by the boys in the shoe-shop has been satisfactory on the whole, although, in two or three cases it has not been what I expected and hoped to attain, spells of illness having retarded some of the pupils very considerable. The boys have worked faithfully and steadily during the year with very little misconduct and no actual disobedience. The quality of the work turned out has been satisfactory, as the stock used was the best we could obtain. The pupils appear to value the acquirement of a trade more than in the past and evince greater anxiety to become proficient. Several of our boys have secured steady situations since school closed in western Ontario." The girls in the Sewing Department have made commendable progress. One or two who were there last year are making a good living, dressmaking. The matron and instructress report: "All those engaged in this department have been good and obedient, anxious and interested in acquiring a knowledge of dressmaking, tailoring, etc. They were taught to cut waist patterns for themselves by the World's Fair Tailor System and to make garments that would be ordinarily required in every day use. All the sewing required for the Institution has been done in the sewing room by the deaf girls." The Fancy Work Class continues to give good satisfaction. The lads working in the Carpenter Shop and Bakery have been industriously employed and learned many things that will help them in making a livelihood after they leave here.

#### OFFICERS AND TEACHERS.

We have had a great number of changes in our staff of officers and teachers during the year. Miss M. M. Ostrom and Miss F. Maybee, teachers in the literary department, and Miss S. A. Hale, trained hospital nurse, resigned on account of

their getting married: they were conscientious and capable in their several departments, and when they left took with them the merited esteem and good wishes of pupils, officers and teachers. Miss Ada James, in consequence of ill-health, was granted a year's leave of absence to recuperate. Mr. A. A. McIntosh took the place of a retiring teacher for six months and assisted us through an emergency. Mr. Jos. Middlemass, engineer, also retired at the close of the school session. The new appointees are giving satisfactory service. Mr. Thos. C. Forrester taught in Glasgow and Belfast Institutions for the Deaf for over five years, and comes to us highly recommended. Mr. M. Madden was a pupil here and afterwards graduated at Gallaudet College at Washington, D.C., with honors. Both these young men are well acquainted with the work required and bid fair to be successful instructors. Miss Nina Brown was a valued teacher in the public schools, and owing to partial deafness, turned her attention to this work for which she was in training for about two years: her tact, earnestness, ability and sympathy with the deaf children auger well for her success in this new field of labor. Mr. John Kane, engineer, has already demonstrated that he is a competent man for his position. Miss S. McNinch is the hospital trained nurse and is winning her way into the hearts of those who are likely to require her services.

#### THE FARM AND GARDEN.

The yield this year from the farm and garden, owing to the extreme drought in the middle of the summer season, has not been as satisfactory as we could have wished for. Hay and oats were a good crop, but potatoes and roots generally, were below the average: in fact, we did not get as many new potatoes as we put in old ones for seed. We had enough corn to fill our silo, and this with the hay and oat crop will suffice for feed for our horses and cattle. The front grounds presented an inviting appearance.

#### NEWSPAPERS RECEIVED.

The publishers of the newspapers hereunder mentioned have our thanks for generously sending copies of their publications to our reading rooms free of charge:

## MISCELLANEOUS.

The electric lighting installed in January last is a great boon to us, and is far more satisfactory than the intermitting gas supply furnished of late years.

The Report of the Government Literary Examiner, Mr. D. Fotheringham, of York County, gives the views of an independent authority as to the scope and thoroughness of the instruction given our pupils. We are striving after better results each succeeding year.

The health of the pupils generally was good during the year. One death occurred, that of George Arnall, aged 16 years, from Toronto. He was a nervous, weakly lad and unable successfully to resist a recurring attack of spinal meningitis, from which he lost his hearing some years prior to his coming to the Institution.

We have in residence 260 pupils—144 boys and 116 girls, a few less than we had on the same date last year. Four did not come back as their parents removed to the United States, and several others have been kept at home for various reasons. Twenty-six new pupils were enrolled at the beginning of the session making 30 in all for the year.

The Grand Trunk, Canadian Pacific and Central Ontario Railways still continue their favors in allowing our pupils, officers and teachers double journey tickets for single fare during vacation. Officers, station-masters, conductors and trainmen give our pupils the utmost attention and care everywhere on their lines. The local officials of the Grand Trunk, at Belleville, are particularly solicitous for their welfare and safe conveyance.

The following named reverend gentlemen visited us and conducted religious services for the pupils belonging to their denominations:—Rev. Canon Burke, Right Rev. Monseigneur Farrelley, V.G., Rev. T. J. Thompson, M.A., Rev. Chas. E. McIntyre, Rev. V. S. Cowsert, Rev. R. W. Maclean, Rev. Father Connelly, Rev. Mr. Cade, Rev. J. J. Rice, Rev. N. Hill, Rev. C. W. Watch.

Any success we may have had in our Institution is due to the faithful services of officers and teachers generally, laboring harmoniously together; and to you, as Inspector, I am especially indebted for prompt, hearty support and assistance in carrying on the good work in which we are engaged. The motto of the Institution still is:—"The truest happiness is found in making others happy."

The statistical tables are herewith attached.

I have the honor to be, Sir,

Your obedient servant,

R. MATHISON.

Superintendent.

## AMENDED BY-LAWS

OF THE ONTARIO INSTITUTION FOR THE DEAF AND DUMB, BELLEVILLE.

*Regulating the Admission and Discharge of Pupils.*

In conformity with the provisions of an Act respecting Institutions for the Education of the Deaf and Dumb and the Blind in the Province of Ontario, 36 Vict., cap. the Inspector of Asylums, Prisons, etc., enacts as follows: Sections 1, 4, 6, 7, 8, 9, 10 and 13 of cap. 2 of the existing by-laws are hereby repealed and the following substituted in lieu thereof:

I. All deaf mute youths of both sexes between the ages of seven and twenty, not being deficient in intellect, and free from contagious disease, being *bona fide* residents of the Province of Ontario, shall be admitted into the Institution.

II. The period of education and instruction for any pupil shall not exceed seven years, and no pupil shall remain in the Institution after the age of twenty-one, unless under special circumstances: discretionary power in this respect to be vested in the Inspector and Principal

III. The regular annual school session shall commence on the second Wednesday in September each year and shall continue till the third Wednesday in June and applications for admission will be made in good time to ensure the pupils' reception at the commencement of the session. After the first year, no applications for admission will be received after the first Wednesday in September, except in special and extraordinary cases.

IV. Education, as well as instruction in such mechanical employments as may be taught in the Institution, and the use of such books, stationery, maps, school and workshop appliances as may be necessary, together with bed and bedding, to be *free* to such deaf mutes as are specified in section 1 of this by-law.

V. Parents, guardians or friends who are able to pay for the board of the pupils will be charged fifty dollars per session for the same, half of which amount shall be paid in advance, and the other half before the close of the session.

VI. The cost of board will be charged for the full annual school term, between the second Wednesday in September and the third Wednesday in June, and no deduction will be made from the charge in consequence of absence, or any other cause whatever, except sickness.

VII. Parents, guardians or friends who are unable to pay for the board of pupils, shall apply to the clerk of the township, city, town or incorporated village in which they reside, and the clerk of the municipality shall make application to the Principal for the admission of such pupils into the Institution: and the Principal, with the assent of the Inspector, upon receiving the certificate of the reeve or mayor of such municipality, and such other evidence as may be considered sufficient, setting forth that the parents or guardian of such deaf-mute are unable to pay for his or her board, may award admission to such deaf-mute.

VIII. Parents, guardians or friends who are able to pay for the board of pupils, will make direct application to the Principal for admission into the Institution.

IX. Indigent orphans to be boarded, clothed and educated at the expense of the Government, on the application for admission from the municipal corporation in which the orphan resides, with the certificate of the warden, reeve or mayor and that of the county judge attached.

X. Pupils from the other Provinces of the Dominion may be received into the Institution and entitled to all its benefits, at the rate of \$125 per annum, payable semi-annually in advance, for board, lodging and education.

XI. It is required that the pupils sent to the Institution shall be decently and comfortably clothed, and furnished with a sufficient change and variety of apparel to ensure cleanliness and comfort. The name of the boy or girl to be written on each article with permanent marking ink.

XII. The vacation will commence on the third Wednesday in June, and end on the second Wednesday of September, during which time every pupil must be removed to his or her home or place of abode.

XIII. All travelling expenses of pupils to or from the Institution, whether at vacation or in consequence of serious sickness, must be defrayed by the parents, guardian, friend or municipality sending such pupil.

XIV. It is further required that in case of serious sickness, death, misconduct or deficiency in intellect, the pupil shall at once be removed from the Institution.

XV. In the case of each pupil entering the Institution, it is desirable to obtain written answers to the questions in the application paper.

T. F. CHAMBERLAIN, ESQ., M.D.,

*Inspector of Prisons and Public Charities, Ontario.*

SIR,—It is with great satisfaction that I submit my annual report for the past year. While last year we presented such good sanitary conditions, this year I may state is still more satisfactory, inasmuch as the latter part of the year no pupils, teachers or staff were recorded in our sick list, having fortunately escaped epidemics. We had ordinary illness, such as coughs, colds, disordered conditions of digestion, subject to the indoor life of our institution, in the height of our winter climate, as well as accidents and injuries, notwithstanding careful and prudent supervision. Among the first to be reported in our sick list in early part of year was George Amall who complained of eye trouble which passed off, only to be followed by an illness much more serious in character—acute tubercular meningitis developed and in three weeks he died, November 3rd, 1897. Hartley Head and Elmer Barnett each suffered a fracture of the leg and fully recovered without any defect.

In a past report I called your attention to the ventilation of the dormitories and a gymnasium where physical drill could be undertaken. To these I would recall your attention—they are real necessities—and would ask your favorable consideration.

We regret our nurse, Miss Hale, has severed her connection with the institution. She seemed so well adapted to her position from her long connection with the institution, and good judgment in the care of those under her charge. We trust she may be happier in her new sphere. In parting with Miss Hale we welcome Miss McNinch, an experienced and prudent nurse whom, I am assured, will guard the interests of the institution in the same thoughtful way as her predecessor.

Thanking the superintendent and staff for kindly assistance and prompt attention of those in charge.

I have the honor to be, Sir,

Your obedient servant,

J. E. EAKINS, M.B.

BELLEVILLE, Oct. 20th, 1898.

## REPORT OF THE LITERARY EXAMINER.

T. F. CHAMBERLAIN, M.D.

*Inspector of Prisons and Public Charities.*

SIR,—I have the honor to report to you the results of my recent inspection and observations in the Institution for the Deaf and Dumb at Belleville.

## GENERAL IMPRESSIONS.

I was strongly impressed with what seemed to me an unusual and almost universal ambition among officers and teachers to reach high ideals, and at the same time, marked sympathy for and devotion to the unfortunate deaf mutes entrusted to their care.

On the other hand I was greatly struck with the prevailing ambition and efforts of the young people to secure the highest advantage obtainable in the institution. To this end they gave earnest attention to the instruction of their teachers and their interest did not seem to lag when afterward gathered for their studies in the evenings.

The most gratifying feature of all, however, was the unusually good conduct of all the young people from day to day. Were I to compare the spirit, order, earnestness, and application of public school children with what I found without exception during the time spent in the institution, deaf mutes must be awarded the foremost place. The only signs of discontent I encountered arose from disappointment at inability to perform assigned work, or because pupils had not at an earlier age been accorded the privileges they now enjoy.

I was delighted with the freedom allowed the students, old and young, out of doors for intercourse, amusement, relaxation, etc., a freedom free from irritating restraints and details and yet which did not run into license.

In this connection I was strongly impressed with the need of large separate play-rooms for the sexes—gymnasiums, in fact, having the most modern appliances for physical culture, and where in all inclement weather healthful exercise could be had. At present there is no reasonable provision of this kind.

Taking it for granted that such a structure is greatly needed and that a wealthy and prosperous Province like Ontario, is able and willing to make generous and ample provision for her unfortunate deaf and dumb, there should be no difficulty in providing such a building in which, on the ground floor, large, airy playrooms for the boys and girls would be provided, and with the best facilities for physical culture: while on other floors, modern school rooms, well lighted, thoroughly ventilated, and supplied with the best blackboards, maps, numeral frames, illustrations, globes, etc., would take the place of the old, small, poorly lighted, badly ventilated, and in some cases, meagrely equipped rooms that were of course very good thirty years ago, but to-day are far behind the times.

The unusual difficulty of developing among the deaf power to learn, impresses one greatly as he goes from class to class, especially in the lower grades. Many simple things that we are apt to suppose the youngest scholar knows must be laboriously taught. We have not learned elsewhere what a terrible deprivation the loss of hearing and speech is. The alphabet of expression has to be given, and the power of consecutive taught and reasoning developed among those who have had little intercourse with the world or their fellow men.

The necessity for the slow laborious process of the lower grades compels an observer to wonder if exercises similar in character to those of the Kindergarten could not be introduced. Could not the interest and co-operation of deaf mutes be greatly increased if they were supplied with objects that they could handle, combine, separate, count, put into various forms, compare or contrast as to size, shape, color, name, etc., etc.?

By such means the powers of memory, imagination, reason, and so on, could be so stimulated and strengthened that out of study hours material could be furnished for mental activity that would be a great boon to minds so evidently vacant and sometimes unhappy at first.

It is a matter of satisfaction that during the year now closing, drawing has been introduced. While the carefulness of the work differs with the thoroughness of the supervision in the various classes, the work on the whole may be set down as promising: so that, with additional opportunity to train the eye, the hand and the taste, even more encouraging results may be expected in the near future. The mere mechanical work of the lower numbers of the drawing books must be of some value, but much more interest and originality could be developed by the use of simple models and natural objects at an early stage.

#### THE COURSE OF STUDY.

It is hardly necessary to enter into details about the Course of Study since my predecessors have laid these before you from year to year, and the modifications this year are very slight. I shall content myself with emphasizing as I have, elsewhere, a suggestion of a recent examiner as to the value of a Kindergarten methods, devices, and games and occupations for eye, hand, reason, imagination, memory, and so on. This would, I am persuaded, become a most effective means of training among deaf mutes and for promoting mental activity, contentment, and enjoyment.

#### THE TEACHING STAFF.

As a body, I must speak highly of the teaching staff. Most are wrapped up in their work and their children, modest and efficient, with, in most cases, special training, experience, and aptitude for their responsible and taxing work.

A large proportion are not only able to give needed instructions, but can get it back again in definite thought and exact language from their pupils, which is the highest test of efficiency in a teacher.

I also found a number who could teach broadly, giving much more than the mere prescribed limit, so that the written answers I received in some rooms were couched in varied language, but full, definite, and to the point.

In other cases, answers seemed to have come from the same mould with monotonous uniformity, showing that the teacher's work must have been largely routine in its character and lacking in breadth and elasticity.

I found no lack of governing power. Indeed, it seemed as if deaf mutes did not need to be governed in their classrooms, but I found more eagerness and activity in some rooms than in others, and these were evidently a development from the energy and enthusiasm of the teacher. These qualities of a teacher are essential to success in any school, but in one where the silence of death reigns they ought to be pre-eminent.

I am pleased to say that the absence of this was felt seriously in very few rooms and in these I found on the part of the pupils less power to undertake

impromptu work or to command appropriate language. Here, also, the mechanical work, writing, drawing, solutions and so on, was not up to the standard of other rooms.

#### INDUSTRIAL DEPARTMENTS.

It was a great pleasure to visit the various departments where industrial work is carried on. Work of which any printing house might be proud is done in the Institution. This may also be said of the work in the carpenter and shoemaker shops. I saw no attempt at elaborate or fancy work, but articles of high merit are turned out by both.

The laundry work in which all the girls take part was quite creditable: and large quantities of fancy work both ornamental and useful in addition to articles of clothing for both sexes were found on the girls' side.

The washing, cooking, baking of the Institution, all of which I had opportunity for observing, seemed quite satisfactory.

The value of the training thus given in all departments cannot be overestimated in the case of so many helpless and dependent ones—the wards of the Province

To spend a week in the Institution and see the quiet, efficient administration, the progress of the inmates in education, in self control, in intellectual activity, in moral strength and reverence for sacred things—in so much that must elevate, refine and strengthen—has been to me a pleasure and an inspiration that I did not anticipate. I can only hope that all on whom it is in any way dependent will make a deliberate visit too. Never afterward would they begrudge abundance of the best of all that could contribute to the perfecting of its equipment and work.

In closing permit me to say that I met with the utmost courtesy and kindness from officers, teachers, and scholars during my visit, and that I believe, as no doubt you do, that very much of the efficiency of the Institution is due to the untiring and wise efforts of the Superintendent and Matron.

I have the honor to be, Sir,

Your obedient servant,

D. FOTHERINGHAM.

SIXTH REPORT

OF WORK UNDER THE

CHILDREN'S PROTECTION ACT

ONTARIO

FOR THE YEAR ENDING NOVEMBER 30TH,

1898.

---

PRESENTED BY THE  
SUPERINTENDENT OF NEGLECTED AND DEPENDENT CHILDREN  
OF ONTARIO.

---

TORONTO:  
WARWICK BRO'S & RUTTER, PRINTERS, 68 AND 70 FRONT ST. WEST.  
1899.

OFFICE OF THE SUPERINTENDENT OF NEGLECTED  
AND DEPENDENT CHILDREN OF ONTARIO.

PARLIAMENT BUILDINGS,  
Toronto, Jan. 25th, 1899.

SIR,—I have the honor to transmit herewith, to be presented to His Honor the Lieutenant-Governor, the Sixth Report of the work of this Department under the Childrens' Protection Act of Ontario, being for the year ending on November 30th, 1898.

I have the honor to be, sir,

Your obedient servant,

J. J. KELSO,  
Superintendent.

The HONORABLE E. J. DAVIS,  
Secretary of Ontario,  
Toronto.

ONTARIO.

TORONTO, January 15, 1899.

**F**OR the following pages will be found an account of the work carried on during the year 1898 under the Childrens' Protection Act of Ontario together with such general comments or information as may seem appropriate and helpful. There has been an advance in many directions—societies for the protection of children have been organized in four new districts; homes have been found for more dependent children than in any former year; a larger amount of preventive work has been done, and the greater efficiency that comes with experience has to some extent been realized. All has not been accomplished that could be desired—far from it—but considering the difficulties—the difficulty first of interfering with the parental relationship even in the worst cases of neglect; the difficulty of securing funds for the work, and the difficulty of sustaining interest and enthusiasm in a worthy movement after the first novelty has worn off—the results have been most gratifying. Many parents who were completely sunk in vice and drunkenness have been induced to reform for their children's sake; children who were being ruined and degraded almost beyond conception have been saved ere it was too late; homeless children deserted by indifferent parents in various refuges and public institutions have been provided with foster homes, and boys and girls who were subjected to ill-usage and overwork have been protected and befriended. The children's aid societies—some thirty-five in number—who have been working so well and faithfully both for the children and the community, are composed of the representative people in the various cities and towns of Ontario, and the powers conferred upon them in protecting the children have been exercised with care and discretion. There has been much praise for the work, from the press, the pulpit and the judiciary, and there also has been some slight criticism. Indeed it would be most surprising if such a work as this, dealing as it does with the most sacred relationships of life, should not occasionally meet with hostile criticism, for no appeal is calculated to awaken public sympathy more quickly than the complaint of a parent that he or she has been unjustly deprived of a child. But surveying the whole field, and reviewing the year's operations, it is both pleasing and creditable to be able to

say that the work as a whole has been remarkably free from hardship or injustice when due consideration has been given to all the circumstances. It is far from a pleasant work to be constantly dealing with the vice and depravity of human nature, when anxious thought and earnest effort on behalf of unfortunate children is met with rebuff and indifference, and those citizens who give so much volunteer service in the development of the child-protection movement deserve only the highest praise and commendation. There is room for a much larger work than has yet been attempted, but this will not be possible until all classes in the community realize more fully what a menace every neglected child is to the peace and happiness of our modern civilization, and unite in a systematic effort to cut off the incipient pauper, lunatic or criminal. A few references are made in this report to the adverse conditions against which some children have to struggle, and these instances might be multiplied many times by those who have practical knowledge of this class of work.

An objection that has of late been urged is that the parents are denied the privilege of knowing where the children are after they have been taken in charge by one of the societies. While in certain exceptional cases there may appear to be a hardship in this, it must be remembered that the people who have to be dealt with are not as a rule the sort of people who could be trusted with the address. Many instances might be given illustrating the disastrous results that often follow when the parents get to know where the children are, but two or three cases that have come under my personal observation will suffice to show why it is so necessary that the greatest care should be exercised :

A motherless girl of twelve whose relatives were of a very low type and apparently beyond reclamation, was placed in a home by a children's society. She was a girl of sweet and attractive disposition and speedily endeared herself to the people who had given her a home. No pains or expense were spared in surrounding her with every comfort and in giving her an unusually good education. But in course of time the father found where she was, went to the house under the influence of liquor, and made so much of a disturbance that in great sorrow the people brought the girl back and stated that much as they liked the child they could not endure the thought of such a man coming periodically to their home. Now, what was the result? The child lost a good home and bright prospects. The father's abode was not fit for her to live in and she was compelled to go out as a servant where the question of affection and kindly interest does not enter.

Some years ago a girl was sent to the country by one of the children's institutions to remove her from the degrading associations of her mother who was known to be one of the worst women in Toronto, having served over twenty terms of imprisonment. After a time the relatives succeeded in finding where the girl was and in a short time she was back again in Toronto. She is now lead-

ing an abandoned life and has recently been up in the Police Court for immoral conduct. There is now no possibility of her reformation and she will in all likelihood go from bad to worse until she fills a consumptive's or a pauper's grave.

About a year ago a mother whose children had been removed by order of the magistrate pleaded so hard for her children that it was decided as an experiment to give her back one of them. Within a few months after the child had gone back to the mother the police were compelled to raid the house owing to the frequent complaints of disorderly conduct. The mother was found almost naked and completely intoxicated and there were three drunken men in the house. It was necessary under these distressing circumstances to again take the child and provide a home for her, while the mother was given the alternative by the magistrate of leaving the town or going to prison.

Within the year two bright children were taken away by the magistrate from a dissolute mother, but after a time he rescinded the order probably owing to the talk of people that it was wrong to separate parent and child. Two months after getting them back the mother traded them off to a very depraved woman who was herself the mother of two illegitimate children, one of whom had been taken from her by magisterial order owing to the fear that it would get killed in one of her drunken sprees. These two children travelled through the country all last summer with this woman and a male companion begging and obtaining supplies by questionable means, and there is every indication that in later years they will spend their time at the public expense in one of the numerous poor-houses that are now being erected in the Province.

Surely these sample cases, which could be multiplied many times, will serve to show the peculiar difficulties that have to be dealt with and will justify the withholding of the address of children from parents who have long ceased to be worthy of such an honorable title! Just a short time ago a newspaper published under large headings a complaint from a man that his child had been taken to an institution and placed in a home without his knowledge or consent. This the paper in its headings announced as a great injustice and public wrong. Now, what were the facts in the case? Years ago a woman with a family left her husband and went to live with another man. As a result of this adulterous relationship a child was born. The couple frequently quarrelled; and both were addicted to drink, the woman a little more so than the man. When the child was about eight or nine years of age the mother was taken to jail for drunkenness and the little girl was with her. Under all the circumstances the magistrate decided that the child was better away from such people and she was committed indefinitely to a public institution. The parents acted so badly when they went to see her that the poor child trembled at their approach and did not look forward to the meeting with any degree of pleasure. As she was a beauti-

ful and refined looking girl a good home was found for her where she is now doing remarkably well. She has no desire to see any of her former relations nor could any intercourse with them be other than hurtful.

The fact is that the general public have very little idea of the perplexing conditions that confront the worker who tries to help and rescue these unfortunate children. Tales of cruelty, hardship and injustice, that would hardly seem credible constitutes much of the daily routine, while the stories of the immorality and degradation of some of the parents and the vices taught the children are too horrible and shameful to be put in print.

Let me, however, mention a few instances that may help to convince those who are apathetic, if not actually hostile to child-saving work, that there is a real and pressing need for some organization that will take the part of the children, if society is ever to be relieved to any extent of the burden of criminality and pauperism:

About nine years ago the case of two children, a brother and a sister, was brought before the magistrate to see if some form of protection could not be secured for them. They were persistently begging on the streets and told pitiful stories of the whipping that would await them if they failed to bring home at least twenty-five cents. The parents were charged in the Police Court with neglect, and after a brief enquiry the charge was dismissed. No improvement took place in the condition of the children; the parents were summoned several times, but owing to the deep-rooted prejudice against interfering with the family relationship the children continued to beg and were neglected in all that pertains to their moral training. As they grew older both children commenced to engage in criminal practices. The boy was arrested for stealing and was ultimately committed to the Ontario Reformatory. The girl became a moral pestilence, and after it was shown clearly in court that she was not only thoroughly bad herself but had led astray many other young girls she was committed to the Mercer Reformatory for Women. It is now exceedingly improbable that either of these children will ever occupy an honorable position in society.

In the Police Station one evening a young girl was weeping bitterly and the officer in charge stated that she had rushed in and asked to be allowed to stay there. On being questioned she explained, amid her tears, that her mother had tried to compel her to remain alone in a room with a man. Her mother was constantly drunk and the house was the resort of men of the lowest character. Continuing, the girl stated that she had seen her older sister forced to do wrong and the misery and suffering she had gone through was a warning to her to try and do better. Subsequent enquiry proved the truth of the child's statements and when the facts were laid before the Magistrate he committed the girl to a refuge in order to remove her from the mother's influence. But when the time of the girl's sentence had expired the mother insisted upon her parental rights

THE PROCESS OF EVOLUTION.

and compelled the girl to return home with her. She was again subjected to the same evil influences and when last heard of was leading a life of shame, having given up all hope of being able to withstand her unhallowed environment.

A small boy between seven and eight years of age was committed to the Industrial School at Mimico in order to remove him from a bad mother. He remained in the School about six years; during which time the mother continued to visit him. She was a woman of well-known ill-repute and her intimacy with the child completely nullified the good influence of the School. Shortly after the boy's discharge he was found acting as door-keeper or watcher-out for a house of ill-fame in one of the worst parts of the city. Last year he was sent to gaol in the western part of the Province as a professional vagrant, the magistrate describing him as one of the most hopelessly depraved youths he had ever met.

Only a short time ago a Magistrate wrote asking that something be done for three small children. He sent along the evidence taken at a public investigation in which it was clearly set forth that the mother was of confirmed immoral character and that she had encouraged her two daughters, fourteen and sixteen years of age, to follow the same life.

Two children, removed by a Magistrate's order to the guardianship of a childrens' society recently, had the following history: The father and mother had never been married, the mother was a well-known character of the streets, while the father had served no less than seventeen terms of imprisonment for petty crimes. What could be expected from such children other than a criminal career unless removed to better surroundings!

Only a few weeks ago a girl of nine was brought before the Magistrate in one of the towns of the Province. Her father was in gaol, where he had been sent quite a number of times for stealing and other offences. The mother was a woman of well-known ill-repute and the child herself had been taught very debasing practices that will take years to eradicate.

The fact is that the greatest care and judgment requires to be exercised in dealing with the various cases that arise from day to day. While complaints have been made of the injustice of keeping children from their relatives there are also cases where the interests of the children have been materially injured by the interference of relatives. This point may perhaps be made clear by the following instance: About four years ago a man whose daughter had been brought up for several years in one of the children's institutions, made application to get her back as his wife had recently died and there were several small children to be looked after. The man did not bear a first-class character and he was known to be occasionally addicted to drink, but a large number of persons took up his case and were quite firm in their belief that the girl should be allowed to return to her father. In view of the strong representation made the return of the girl was sanctioned, but within four months after she had been in the home the man was convicted of criminal intercourse and was sent to the Penitentiary for seven years,

Three years ago a small boy was left destitute in one of the smaller towns of the Province. His mother had died and the stepfather, with whom he had been living, had been sent to prison. The County Judge and the Crown Attorney both tried to find other relatives but failing in this he was declared a dependent child and sent to a foster-home. About a year ago a man called at this office and stated that he was the boy's uncle, being the only brother of the lad's mother. He expressed great regret at not having looked after the boy and offered to take and provide for him. He was informed that the boy was in a foster home and that there might be some difficulty in arranging for the people to give him up. He, however, very strongly emphasized both his right and his duty to provide for the boy, and as it seemed wise and reasonable that the uncle should be the guardian, a transfer was made and the boy went to his uncle's home. As there were no other children in the family the indications were that the boy's future would now be fully assured. However, after a time the uncle wrote that he did not wish to keep the child any longer and asking that he be taken back. It may ultimately be necessary for the sake of the child to do this, but certainly the relative should not be lightly released from an obligation that morally is so binding.

Several other instances of the evil environment in which children are reared are given under the heading of "illegitimacy," and the certain culmination of such training and environment may be found to some extent in the heavy burden of taxation which the people are called upon to carry, even if the moral well-being of the child is left out of consideration.

Very few people realize how heavy the cost of taxation is for the maintenance of the dependent and criminal classes. Take for instance, the expenditure of the Province of Ontario: In 1897, the total expenditure for Civil Government was \$3,500,653, and of this amount over \$2,000,000 was paid directly or indirectly for education and the maintenance of dependents and criminals. Analyzing the \$2,000,000, we have an expenditure of \$806,131 for the maintenance of public charitable institutions, such as insane asylums; \$192,694 toward the support of hospitals and charities; \$427,866 for the administration of justice, and \$719,815 for education. This is merely the amount contributed by the Ontario Government to supplement the expenditure of the local municipalities and private benevolence. In every large city the maintenance of a police force is in itself a heavy burden,—the cost for this one item in Toronto amounting to one quarter of a million dollars annually. Is it not a wise and reasonable proposition that some slight effort should be made toward the reduction of these heavy expenditures,—and what movement offers greater promise than that which would take hold of the boys and girls who are drifting into dependency and criminality and make of them worthy members of society, growing up to add their quota to the earnings of the community!

## ILLEGITIMACY.

**I**N a work of this kind, dealing with so many sad histories of blighted childhood, it is natural to expect that there would be a large proportion of children born out of wedlock, for whom the unmarried mothers are unable to provide. Speaking of this class in his book on "Illegitimacy", Dr. Leffingwell says: "Against the background of history, too prominent to escape the observation from which it shrinks, stands a figure, mute, mournful, indescribably sad. It is a girl, holding in her arms the blessing and burden of motherhood, but in whose face one finds no traces of maternal joy and pride. There is scarcely a great writer of fiction who has not somewhere introduced this figure in the shifting panorama of romance, appealing for pity to a world which never fails to compassionate imaginary woes; now it is Effie Deans in the Heart of Midlothian; now Fantine, resting by the roadside with Cosette in her arms; or Hester Prynne, pressing little Pearl against the scarlet letter as she listens from the pillory to the sermon of Mr. Dimmesdale. Who is this woman so pitiable, yet so scorned? It is the mother of the illegitimate child. By forbidden paths she has attained the grace of maternity, but its glory is for her transfigured into a badge of unutterable shame."

Among those who make a study of these questions, the best method of dealing with mother and child has long been a perplexing problem. Some have claimed that the chief hope of saving the mother was through her affection for her child, while others have contended that the best that could be done for both parties was to accept the child and provide for it an adoptive home, while allowing the mother to regain her position in society unhampered by the evidence of her lapse from virtue.

A close investigation into the history of many cases of illegitimate children reveals the fact that in spite of any efforts that may be made by theorists or philanthropic agencies the separation of mother and child inevitably comes about at some time or other. The causes leading to this separation are several. Only a small percentage of these mothers are capable of properly caring for a child. Where they are not morally unfit they are often incompetent, have no home or friends are unable to obtain employment with the child, and find it difficult from their small earnings to pay the cost of board. In their difficulty, these unfortunate mothers often resort to the lower class of baby farm, where through neglect and lack of affection the child soon becomes emaciated and permanently broken in health if it does not actually die. The obstacles in the way of the mother keeping her child with her seem almost insurmountable. To do so, she must be prepared to be the constant subject of gossip, to endure the desertion of friends and relatives, and the frequent taunts and slights of those with whom she comes in daily

contact. The presence of the child is a standing advertisement of her downfall and will subject her to solicitations she might otherwise have been spared. Her mother-love, which is often spoken of as her great protection, is not in reality a sufficient safeguard, as it is imperfectly developed, and the fact that she cannot honorably and in the face of the world take pride in her child often turns to bitterness her feelings concerning it.

Then, again, should the child remain with the mother until it reaches years of understanding, there is the danger that it will be frequently reminded of the circumstances of its birth and thereby discouraged from any attempt toward a useful or honorable career. I propose to show by a reference to a number of actual instances that many of the neglected children who have been cruelly used and who have drifted into criminal ways are illegitimate children who have been allowed to drift along with the incompetent and depraved mother until the habits and character were formed almost beyond the hope of remodelling in right and worthy directions.

But before referring to these cases it might be well to state the attitude I have taken in regard to this question: In giving advice to societies, to individuals and to mothers I have always urged that under no circumstance should the mother and child be separated for the first eight or ten months. I have heard of reputable doctors recommending these prospective mothers not to commence nursing the child since they are likely to part with it soon. Such a recommendation is so directly opposed to natural laws that there can be no justification for it. For a mother to nurse her child is a paramount duty, which no question of expediency can override. After the child has become sufficiently advanced to be able to thrive without the assistance of the parent it then becomes a question what course is best, looking at the subject from three standpoints—that of the mother, of the child, and of society. During the past few years my advice has often been asked and while I have never advised that mothers should be encouraged to part with their children I have, as a rule, recommended the Children's Aid Societies to assist in finding suitable foster-homes where such unfortunate children may grow up free from any reproach. It has not been my experience that these girl-mothers drift back into wrong-doing when they are thus relieved of the child, for I have followed the history of a number in order to gain some information on this point. On the contrary I have known of many cases of child-desertion, cruelty, starvation and death to follow a refusal on the part of philanthropic organizations to assist the mother by taking the unwanted child; and the terrible revelations that are made from time to time concerning baby farms, illustrates what follows from a policy of cold indifference.

To show what, as a rule, becomes of illegitimate children who are left with destitute and incapable mothers, let me cite the following actual occurrences:

About two years ago I received word that a very prepossessing little girl of eight was living in a miserable hovel with a man of the lowest character. She

TYPE OF THE UNWEDDED MOTHER.

was an illegitimate child and had been dragged about the country by an unworthy mother and finally given over to this man who was not only a drunkard but had on several occasions been convicted of crime. The child had never even heard a prayer nor had she received any training of a moral character. She was committed by one of the magistrates to a society and provided with a good home.

Another case, almost similar, occurred some three years ago, when an illegitimate child—a girl nine years of age—was found living with a negro in very degraded surroundings. This man claimed to be the guardian, having received the custody from a dissolute mother, and extensive legal proceedings had to be taken before the girl could be got away. In this case also the child had been brought up in the midst of drunkenness and debauchery of every kind.

A short time ago a girl of fourteen, entirely neglected and uneducated, was sent to a public institution after she had voluntarily confessed to a long course of wrong-doing. She was an illegitimate child with intellect weakened through neglect and lack of training, who had drifted along with a bad mother and would undoubtedly have become as notoriously bad as her mother had she not been taken away even at this late day. Her wrong-doing was not her own fault, but the natural consequence of her evil environment. Although never married the mother now has several children, the youngest only a few months old.

Investigation of a horrible case of ill-usage meted out to a girl of thirteen, revealed the fact that she was an illegitimate child and that it was the misfortune of her birth that was responsible for the cruel treatment she received. She was the victim of carnal intimacy from her eighth year and her soul has been scarred deep by the bitterness of her early life.

A boy now in prison and likely to be a burden and expense to the country all his life, became a criminal almost solely because he was an illegitimate child and no one had interfered to take him away from a bad mother until it was too late to change the character that had been steadily formed in years of depravity and vicious teaching.

While visiting a County poor house I found there a woman with her illegitimate daughter and an illegitimate grand-son and all the circumstances of the case clearly indicated the inevitable tendency of illegitimate children to go to destruction unless removed from baneful influence and given an opportunity under newer and better auspices.

From my present knowledge and experience in child-saving work, I believe that an illegitimate child remaining permanently with the mother rarely if ever is able to live down the tremendous odds against it, but sinks into an abyss of despair and becomes the enemy of society.

About two years ago my advice was asked as to the disposal of a ten year old girl who had been committed to gaol for thirty days as a vagrant. She was an illegitimate child driven by long neglect and abuse to sleep in the woods and

barns, and knowing little more of what was good or christian than the most benighted heathen child. Shunned and despised by other children, beaten and reviled by those she lived with, what wonder that at ten she should find her way to the gaol.

A case was brought to my attention not long ago where a woman who had several illegitimate children, was helped and to a large extent supported by christian women who sympathized with her in her misfortune. It was hardly a case for christian benevolence, but rather a matter that should have engaged the attention of the officers of the law. There seems to be a tendency in some districts to treat lightly these moral lapses and to go on tolerating and condoning wrong instead of taking vigorous action to stamp out the evil. All these children, as they grew old enough, required to be provided for at public expense.

These children—the unwanted, the unloved—have many doors shut against them, for good people have often strong prejudices that are hard to overcome, and life would indeed go hard with the innocent little ones were all equally predisposed against them. Pleading on behalf of such children, a clergyman exclaimed, “Illegitimate children! There are none. There are illegitimate parents, but no illegitimate children.” Without condoning the offence of the parents in any way, or rendering it easier for others to commit the same greivous sin, should not the conditions of life be made as fair as possible for these children? As Dr. Sheard, Medical Health Officer of Toronto, very wisely said in an interview last year: “We must protect the children. We cannot shut our eyes to the fact that these innocent and unoffending creatures are in this world and will continue to come into this world. There is no wiping out of immorality. The situation must be faced, and reason, justice and humanity brought to bear upon it.”

There is reason to believe also that if removed from evil and degrading associations at an early age, the child may become a good citizen and grow up entirely free from any hereditary tendency to wrong-doing, and as a matter of economy, as an act of simple justice, it pays to help them and to give them an opportunity to achieve for themselves an honorable and useful place in society.

#### DR. SHEARD'S REPORT.

Under the Maternity Boarding House Law, passed about a year ago, some effort has been made in Toronto to put a stop to the wholesale traffic that was being carried on for the quiet removal of these unwanted children. Dr. Sheard Medical Health Officer has taken over the official supervision of all maternity boarding houses and baby farms and is endeavoring to have this class of work carried on in a proper manner. During the year, one woman was sent to gaol for gross neglect of several infants, while fines were imposed by the magis-

trate on parties who engaged in this business without authority. In response to a request for some information, Dr. Sheard has kindly written as follows :

Toronto, January 4th, 1899.

J. J. KELSO, Esq.,

*Sup't. Neglected and Dependent Children, Parliament Buildings.*

DEAR SIR,—In reply to your communication of December 28th, asking for a statement as to what has been accomplished under the Act relating to Maternity Boarding Houses, and Neglected and Dependent Children, I desire to state that the Act was put in force by By-law of the Municipal Council of the City of Toronto, in May last, since which time all the Maternity Boarding Houses in the City of Toronto, known to me have been carefully and thoroughly inspected as to their equipment, accommodation, supplies, etc., in addition to which Dr. Harley Smith has been appointed Medical Inspector in charge of the work, and whose duties are to inspect weekly all the Maternity Boarding Houses, and also bi-weekly all Baby Farms in the City of Toronto, and in said inspection to carefully examine the children kept in all Baby Farms and report weekly as to their state of health, progress, etc., and which has been systematically and thoroughly done.

Permits have been issued for seven Maternity Boarding Houses within the City and for twelve Baby Farms. Many of these, however, accommodate but one child, and only one accommodate more than two children, so that there is still great difficulty in securing proper places where children born under the condition contemplated in the Act may find suitable lodgment and care.

We have occasionally to order the removal of children from places where we consider they are not getting satisfactory care, and it is sometimes difficult to know just where to send such children. Also we have almost daily applications for homes for children born under unfavorable circumstances.

The Department has also undertaken to answer all advertisements which appear in the papers relating to the adoption of infants, or the housing of women about to become mothers, and where such premises are not licensed in accordance with the Act, the Department has instituted vigorous prosecutions as prescribed, with the result that we have secured four convictions.

The result of this work so far as I can ascertain, has been first of all to have it pretty thoroughly and generally known that the illegitimate children born within the City, have got to be properly and thoroughly cared for.

Secondly to practically put a stop to the adoption of children for lump sums of money, and thirdly to materially decrease the number of children left on the street to be cared for indiscriminately by the authorities.

The operation of the Act is yet in its infancy, as well as the system of inspection. There are many things which one finds out by experience, which will prove of material benefit in the work, but I am confident that the thorough carrying out of the Act throughout the Province would tend materially to lessen infant mortality.

Trusting this brief report will be in a measure satisfactory, I have the honor to be,

Faithfully yours,

CHARLES SHEARD, M.D.

Medical Health Officer.

CARELESS PARENTS.

When the work of child-saving is properly and systematically carried on there will be very few cases of child desertion or shirking of duty by parents. Under a slipshod system whereby the children are easily admitted to public institutions and given back whenever demanded by the parents, the number of applications for

TWO OF THE CHILDREN SHOWN IN PRECEDING PICTURE.

admission is very large, but where the entire guardianship of neglected or deserted children is assumed by the institution or society, and the welfare of the child rather than the convenience of the parent considered, there will be a greater effort put forth by this class of people to keep their children with them. As an illustration of this fact the following incident might be mentioned: A short time ago the announcement was made that the Industrial School had decided to send seven boys who had worthless relatives, to foster homes in the North-West. All these relatives and others who were quite willing to have their children maintained at public expense, immediately made a stir and expressed the greatest anxiety to have the children again under their control. It is safe to say, also, that the announcement had the effect of deterring many who were inclined to seek admission for their children to an institution, and that it acted as an inducement to them to look after their children a little more carefully themselves.

#### CITY AND COUNTRY.

In child-saving work there is a close and indissoluble union between the city and country, as a large number of the cases requiring consideration come originally from the country, while the children, in going from the city to foster homes, are placed almost entirely in the country districts. The burden of caring for the poor and unfortunate must always fall heavily upon the cities as owing to the presence of numerous hospitals and charitable institutions, this class is encouraged to believe that their wants will be attended to. Sometimes the impression prevails in the towns and villages that owing to their small population, child-protection work is not needed. One result of this policy of indifference has been that here and there in the country a boy, or girl, or a family, is allowed to grow up in complete ignorance and depravity and then when their misdeeds become widely known they are shipped off to the larger places to continue their career. It is my firm conviction that if the authorities in each village would look after the one or two negligent families within their borders the number of criminals and paupers in the larger towns would soon be materially reduced.

#### Co-OPERATION.

It has been the aim of this office from the first to secure an active and hearty co-operation in Children's Aid work in all parts of the Province. Even the smallest town can contribute its share, and although sometimes it may appear unnecessary to form a Society in a small place, the result has frequently proved most helpful to the work generally. The wider and more general the interest taken in neglected children the better, and the preventive character of the work is something that should always be borne in mind. There are careless people everywhere who are neglecting their children, and who, if they were reasoned with or warned would immediately remove any cause of complaint. The impression sometimes prevails that the only successful work is that which takes the children away

altogether from vicious people, but this is an error that cannot be too frequently pointed out. The best plan will always be that which removes the trouble and reunites the family, and then if intervention should eventually be necessary the fact that effort has been made to secure improvement would make the case all the stronger.

#### PROVINCIAL SHELTER.

The absence of any Provincial Shelter for the temporary care of neglected children and also the fact that there is no officer whose duty it would be to investigate and take action in cases occurring outside the jurisdiction of a Children's Aid Society, has made it difficult to secure all the good results possible. I have frequently gone outside my legitimate duties in order to provide for children who would otherwise have remained totally uncared for, but in view of the fact that there is no shelter or other provision made for such children, only a very limited number could be handled in this way. Many of the institutions confine themselves almost exclusively to local needs, and often it is a problem to know how to dispose of some little waif coming from a village or sparsely settled district, particularly if ineligible for adoption. Latterly a plan of co-operation between Societies in placing homeless children has been instituted, which is capable of much expansion.

#### COUNTY ORGANIZATION.

Judging from the manner in which the work has been developing the indications seem to be that the best line of work in the future will be along county lines; that is, to have a Children's Aid Society organized for each County with an office in the County Town and a regularly employed agent to supervise the work. An officer of this kind would find ample employment and would certainly be the means of largely reducing the public expenditure for the care of dependent people. Branch committees could be formed in each of the towns of the county, and a grant from the county Council, supplemented by private contributions would defray all the necessary expenses. In several districts the Societies are now organized with County jurisdiction, and are gradually assuming their full work as county organizations.

#### INCURABLE CHILDREN.

There has been some agitation during the year for the establishment of an institution for the care of incurable children. While there are undoubtedly quite a number of children scattered throughout the Province who are in need of special treatment of this kind, the subject is one that should be very carefully considered before definite action is taken. Probably the better plan would be to arrange for the care of these children in some building already in existence. Every new institution that is erected means a fresh departure from the true principle, namely, that the poor and the unfortunate should be cared for as far as possible in their own homes and by their own relatives. Sick and deformed children are

undoubtedly blessings in many homes, drawing out the sympathies and elevating the characters of people who might otherwise become cold and selfish. Gathering such children into a public institution might be a relief to relatives and in some cases a boon to the children, but it is a question if the multiplication of institutions is in the public interest. A consolidation of existing work for neglected and dependent children would probably leave room for every child at present uncared for who actually needs institutional treatment.

#### THE CURFEW LAW.

The curfew by-law, which was passed by so many municipalities a few years ago, has not been advocated so strongly during the past year by those who were at first inclined to look upon it with favor. The fact is that the law has not been put in force or anything like a reasonable attempt made to secure the benefits which it aims at. In a majority of instances the by-law was passed in deference to the wish of an influential deputation, when even the councillors themselves were not in sympathy with the measure. Beyond ordering that the bell should be rung at nine o'clock no action was taken, and the children, who at first might be inclined to observe the law, soon came to understand that its strict enforcement was not seriously contemplated. The law has therefore remained a dead letter in many of the towns where it is supposed to be in force, and the children have been on the street or in their homes after nightfall quite irrespective of any statute in that behalf. My conviction is that legislation of this kind cannot be effectively carried out in view of the fact that neither parents nor officials are heartily in accord with it. The only way in which children can be protected from the dangers of evil association after evening is by impressing upon parents their responsibility, and giving the children themselves in their daily school training such moral instruction as will tend to develop good habits and modest instincts.

#### MANITOBA AND BRITISH COLUMBIA.

I had the honor of being invited during the past year by the governments of Manitoba and British Columbia to visit those provinces and explain the working of the Children's Act of Ontario. These invitations were exceedingly gratifying to me, as in addition to forming many pleasant friendships, I was privileged to have a part in the inauguration of what may yet be a great work for neglected and homeless children in the younger provinces of our country. During the ten days from March 20th to 30th I addressed nine public meetings in the city of Winnipeg and spoke for about an hour before the members of the Legislature of Manitoba. The subject was received with great favor and a Children's Protection Act was unanimously placed upon the statute books of Manitoba. A Children's Aid Society was also organized by the most influential citizens of Winni-

peg, and I understand that some three or four similar organizations have since been formed in different sections of the province. Hon. J. W. Sifton was appointed superintendent of neglected and dependent children of Manitoba.

During my visit to Manitoba I received a telegram from the Honorable Jas. Baker, Provincial Secretary of British Columbia, inviting me on behalf of the Government to visit that province and address the Legislature, which was then in session. This I was very glad to do, and spent the early part of April in British Columbia giving addresses in Victoria, Vancouver and Nanaimo. On April 6th the Honorable Mr. Turner, Premier of British Columbia, moved that the Speaker leave the chair and that I be requested to give an address on the Children's Protection Laws of Ontario, and for considerably over an hour I was privileged to present the claims of neglected children upon the consideration of Parliament. The honor of thus addressing the Legislature while in regular session was one rarely if ever accorded before to an outsider, and it was therefore an occasion which I look back upon with feelings of the greatest pleasure. As the session was drawing to a close and a new election was shortly to take place, the members of the Government informed me that while they might not act at once the subject was one that met with their heartiest approval and should at an early date be suitably legislated upon.

#### CANADIAN CONFERENCE OF CHARITIES.

An important event of the past year was the holding of the first Canadian Conference of Charities and Correction at the Normal School building on November 10 and 11. About fifty delegates were present from outside points and over one hundred representatives from the local charities. The object of this conference was to afford an opportunity for philanthropic workers in various parts of the country to become better acquainted with each other and also to consider the best methods of caring for the dependent classes. Some interesting and helpful discussions took place during the two days meeting and arrangements were made for an annual gathering.

The constitution adopted for the conference was somewhat similar to that of the National Conference of the United States and the officers elected were as follows: President, Judge H. S. McDonald, Brockville; Vice-Presidents, Judge R. S. Woods, Chatham, J. J. Kelso, Toronto, Dr. W. L. Herriman, Lindsay; General Secretary, Dr. A. M. Rosebrugh, Toronto; Assistant Secretary, Mr. John Keane, Ottawa; Treasurer, Mr. James Massie, Toronto; Executive, Hon. Chas. Drury, Barrie, Mr. John Armstrong, Owen Sound, Mrs. Tilley, London, Mrs. E. H. Bronson, Ottawa, Mrs. Cox, Montreal, Mrs. Willoughby Cummings, Toronto, Mr. J. J. Murphy, Toronto, Mr. Sheriff Cameron, London, and Dr. J. T. Gilmour Toronto.

## FOSTER-HOMES.

THE work of finding suitable foster homes for dependent children has gone on steadily and as will be seen by reference to the figures given herewith there has been an advance each year since the system was established. This branch illustrates more forcibly than any other the value and importance of child saving work, for although preventive work is the best, it is not so readily understood or appreciated as home-finding. From the experience of past years I can say without a doubt that the placing-out system is a distinct success, and that any failures, disappointments or drawbacks incidental to it are counterbalanced by the great advantages that accrue to the children and to the community at large. I have studied carefully the present position in foster homes and situations of hundreds of children, as compared with their former surroundings, have read and listened to the individual reports of visits made to the children by Mrs. Harvie; have read letter after letter from both the children and their foster parents, and have met many of the children themselves, and my firm conviction is that the work is worthy the support and endorsement of all good people. Apart from the absence of blood relationship, which nothing on earth can fully make up to them, the children are better off, are happier, and are receiving a better training for life's duties, than thousands of children in their own homes. My personal knowledge, combined with the report of the children's visitor goes to show that the number of children placed out under the Children's Aid system who are ill-treated or over-worked, is so small as to be insignificant in comparison with the satisfactory results of the general work. This is explained in the fact that the homes are carefully selected; the children are visited in their new surroundings, and the foster parents encouraged to be faithful and patient in dealing with the young lives intrusted to their care. No child is ignored or forgotten, while the visits are made in such a way as to be in almost every case heartily welcomed by the foster parents. There are here and there a family who ask that there should be no close supervision, and this wish is always respected since there are usually special circumstances that make visits unnecessary, but even these would not find a visit in any sense inspectorial or annoying so long, at all events, as the present visitor continues in the work. Occasionally parties adopting a very young child express a wish to keep from it the fact of its adoption, and to have it grow up in the belief that it is their very own. This is a mistake and the deception will ultimately bring sorrow to all concerned. The true policy is to gently and lovingly explain to the child when it has attained years of understanding the exact relationship it bears to the family and then there will be no subsequent regrets or misunderstandings.

---

---

HOMES FOUND DURING THE YEAR.

During the past year the number of children recorded in the Central office as having gone to foster homes was as follows :

Placed by Children's Aid Societies . . . . .	185
"    Provincial Superintendent . . . . .	40
	225

## A REVIEW OF FIVE YEARS.

The following figures show the number of children recorded as having been provided with foster homes during the past five years, but does not include the new homes for the same children who required to be changed :

Children provided with homes in 1894 . . . . .	79
"    "    "    1895 . . . . .	115
"    "    "    1896 . . . . .	194
"    "    "    1897 . . . . .	215
"    "    "    1898 . . . . .	225
	828

## SEX OF CHILDREN.

Of the total number of 828 recorded on the books, the proportion of sex was as follows :

Boys . . . . .	373
Girls . . . . .	455
	828

Taking the number placed during the year, 225, the proportion of the sexes was as follows :

Boys . . . . .	94
Girls . . . . .	131
	225

## AGES OF CHILDREN.

The ages of the 225 children provided with homes during the year were as follows :

Three years and under . . . . .	58
Between three and six years . . . . .	43
Between six and ten years . . . . .	58
Over ten years of age . . . . .	66
	225

## SOCIETIES PLACING CHILDREN.

Returns of children placed in foster homes were made by the following societies. Only those children who are recorded for future supervision are given here, omitting children over fifteen or sixteen who have been placed in situations, and those children who have been simply transferred from one relative to another :

Toronto .....	44	Goderich .....	3
Ottawa .....	28	Dunnville.....	3
London .....	23	Guelph .....	2
Owen Sound.....	14	Galt .....	2
Mr. Watch .....	13	Paris .....	1
Chatham .....	10	Lindsay .....	1
Hami'ton .....	9	Dresden .....	1
Orillia .....	6	Windsor .....	1
Brockville.....	5	Collingwood.....	1
Brantford .....	4	St. Vincent de Paul....	1
Barrie .....	5	Belleville .....	1
Stratford.....	4		
Peterboro'.....	3		185

It should be explained, however, that in addition to the above, several of the leading societies have aided the smaller organizations and this office in finding homes. Notable assistance in this direction has been given by Rev. James Lediard, agent of the County of Grey society, Rev. C. W. Watch and the London and Guelph societies. The prospects of increased co-operative effort in home-finding are exceedingly bright for the coming year.

## LOCATION OF CHILDREN.

The counties or districts in which the children have been placed are chiefly as follows :

Carlton .....	16	Dufferin .....	1
Grey .....	15	Victoria.....	3
Bruce .....	8	Waterloo.....	1
Brant .....	3	Lambton.....	4
Addington.....	1	Leeds.....	1
Wellington.....	10	Prince Edward.....	1
Perth .....	9	Essex.....	4
Simcoe.....	11	Parry Sound.....	2
York .....	27	Ontario.....	4
Kent .....	14	Dundas.....	2
Renfrew.....	1	Lincoln.....	1
Algoma .....	5	Russell.....	1
Prescott.....	1	Haldimand.....	3
Oxford .....	6	Northumberland.....	3
Norfolk.....	3	Lanark.....	1
Middlesex.....	12	Glengarry.....	1
Stormont .....	1	Manitoba and the N.W.	16
Grenville.....	2	Quebec .....	10
Peterboro'.....	2	In shelters.....	15
Wentworth .....	3		
Durham.....	1		225

## REPLACEMENTS.

Taking the whole number of children on the books—over eight hundred—the number who have changed their places during the year totalled fifty-six. The causes leading to these changes were very varied, but in the majority of instances the chief trouble was simply lack of congeniality between foster parent and child. Of the children returned, twenty-four were sent to other homes almost immediately, while there were eight remaining in the shelters for replacement when the year closed. Five children ran away from foster homes; three were returned to their parents; three were sent to the Alexandra School for girls; one was sent to the Victoria Industrial School; two went to the Ontario Reformatory for boys, and two were sent to the Orillia Asylum for the Feeble Minded. Ten children have gone to situations where they have become self-supporting. Two young children were removed from the records during the year by death.

## Foster Home TREATMENT OF THE CHILDREN. &amp; ✓ Educ

A charge against the foster home plan of dealing with dependent children that has frequently to be met is that boys and girls are apt to be over-worked and treated with hardship and injustice. While there is certainly a danger of this and every effort should be made to prevent the occurrence of such injustice, I can say without hesitation that reviewing the year's work, and having before me the reports of visits made by Mrs. Harvie to over four hundred children, there is no serious ground for complaint in this direction. It is true that the grown children have to work both in the household and on the farm, but it is not only reasonable but desirable that they should do so. In the majority of cases these children must look forward to maintain themselves by their own industry, and among all who are engaged in philanthropic work the unanimous conclusion has been arrived at that idleness is a prolific cause of crime. Where children are regularly heard from and visited, the danger of over-work is greatly minimized and it will be found that it is the neglect of supervision that is mainly responsible for foster parents disregarding their obligation. The more important consideration is that children should receive affection and kindly sympathy, and where the children are thoroughly satisfied and the foster parents willingly recognize and appreciate their services, the danger is much lessened. It is where the foster parent and child disagree and are not happy in their relationship that a change is desirable. And it should be remembered also that in a public institution children are subjected to rules and conditions fully as irksome and distasteful as any work they are called upon to do in actual life. Sometimes, to judge by the rash statements that are made, one would imagine that these children should be brought up in idleness and luxury—a course of treatment which would without doubt be to their own permanent disadvantage.

Probably the greatest difficulty that confronts the worker is to secure the regular attendance of these children at school, but in many of the instances where children are kept at home there are valid reasons for so doing. In the country districts schools are often two or three miles from the home and in stormy weather it

would be unreasonable to insist upon regular attendance. In other cases children of from ten to fourteen are so backward that they fear the ridicule of the other children and beg to be allowed to remain at home. It must not be inferred from this that the education is neglected, for there are instances where boys and girls have gone to foster homes unable to read or write and without ever having gone near a school-house are now sufficiently well educated for all practical purposes. In this work every child has to be dealt with as an individual, and the home and training adjusted as nearly as possible to actual requirements.

After all, the important consideration is that these boys and girls are growing up strong and healthy, are fairly happy and content, and hardly one per cent. go back to anything like the conditions from which they were first removed. The good done is incalculable, whilst the dangers and hardships incidental to a work of this kind are remarkably small and insignificant. This is something of which the people of this Province have reason to be proud, and it is an encouragement to the societies to go on with renewed earnestness in the great and important work of home-finding.

#### FREQUENT CHANGE NOT DESIRABLE.

One disadvantage which experience reveals is that when children who have been placed in homes become restless and dissatisfied between the age of fifteen and seventeen, they do not mind the possibility of having to leave the foster-home, nor do the foster-parents regard a change as a thing of very serious moment. Where girls especially change their home at the critical age, the strong probability is that they will not do so well afterwards. They are then too old to submit to control or direction and going to a new home or situation do not receive the forbearance that children in their own home-surroundings would receive. Consequently the danger is that they will not stay long in one place but drift from one home to another, each time becoming worse off and forming no friendships that would be of assistance to them. This, of course, is not the result in every case, but the lesson to be learned is that all our efforts in connection with this work should be to keep children, as far as possible, in the care of those to whom they are bound by all the holiest ties of human existence. There always will be instances where no other course is open but to take over children and find adoptive homes for them, but there should be the greatest care and thought exercised so that if possible, the home conditions may be improved and the removal of the children rendered unnecessary. Also, when a child is once in a foster-home it should not be changed for any trivial reason but encouraged in every possible way to be contented, seeking at the same time to get foster parents to remove any just cause of complaint.

#### VISITOR'S REPORT.

During the year Mrs. Harvie travelled through all parts of the Province visiting the children in their foster homes, her various tours aggregating over six thousand miles. Her work was carefully and conscientiously performed and constitutes one of the most advantageous features of the Children's Aid

system. The visits were well received by both children and foster parents, and were, in probably every case, productive of much good. The following report from Mrs. Harvie will therefore be read with interest :

January 5th, 1899.

*To the Superintendent, Neglected and Dependent Children of Ontario :*

SIR.—During the year just closed I have made nine extended tours through various parts of the Province, visiting thoroughly most of the counties where the children have been placed in foster homes.

During these trips I have seen 425 children, and have had ample opportunity to judge of their treatment and home surroundings. To give some idea of the number of miles travelled and the extent of country covered, I might state that to visit these children I have journeyed by rail 4,052 miles, have driven 2,146 miles, and have probably walked an additional 30 or 40 miles, making a total of considerably over 6,000 miles covered during the year.

In some of the distant counties the foster homes are isolated. This is specially the case in Parry Sound district, Muskoka, North Hastings, and the eastern counties. Have several times driven an entire day from 60 to 70 miles to make three or four visits to farms or villages off the line of railway. Twenty miles is not an unusual distance to drive to visit one home. In the newly settled districts it is not easy to reach the clearings, as the roads are often only a trail through the woods. In this work one requires to be resourceful ; on the Muskoka trip alone, I walked 20 miles to reach homes inaccessible to the ordinary conveyance. But it delights one's heart to see the children growing up in these simple rural homes, happy and comparatively innocent. My visits have all been graciously received. In not one instance have I been unwelcome, but on the other hand have always been treated with the utmost respect and kindness. I am pressed to return soon, to come and stay a week, to write and let them know when I am coming and they will be glad to meet me at the station, etc. Indeed, I have formed many delightful friendships with the foster parents of the children after becoming acquainted. The children watch for my return visit and in writing always ask how soon I am coming again. The child feels the importance of the visit from his or her own standpoint, and it strengthens in their minds a wholesome kind of self respect. I always endeavor to keep officialism in the background, and in many homes where the children are young am only known as a friend of the family.

The value of these visits cannot be overrated. In my estimation it is the one thing that renders this work unique. It is a simple matter to place a child in a home, and leave him or her to the tender mercies of the family. But it is quite a different thing to place a child judiciously and then visit personally once or twice a year to discover if conditions are fulfilled, if surroundings continue good, if moral and educational life are being developed, etc. My first duty is to see the foster parents and have a conversation with them, find out difficulties, faults of child, etc. ; then see the child alone, for the purpose of ascertaining if there is any complaint of overwork, unkindness, neglect in the matter of schooling, etc. Afterwards we have an interview together and the clothing, sleeping apartment, etc., are inspected when necessary, while the appearance, manner, training and general surroundings are all matters for quiet observation. Sometimes this is a difficult and delicate duty to perform, as when all these details have been considered it may be desirable to try and correct faults in the child, or in its treatment, or both, offer suggestions, etc. Perhaps one or two illustrations will give some idea of what can be accomplished in this way. This year, in my visitation, I have occasionally found children given to story telling, or saying bad words, or negligent with work of house or farm, or perhaps troublesome on account of a bad or sullen temper. My custom is to talk kindly and earnestly with them, and in the end promise some little reward if they will improve. This has worked

excellently well, as in almost every instance there has been improvement. On the other hand there is occasionally some weakness or defect in the training or manner of dealing with children by foster parents which cannot be overlooked if the child's interests are to be faithfully considered. In one instance, an intelligent boy of 12 years had run away (afterwards returning) because he did not like farm work, and thought his foster father hard. After carefully hearing all the circumstances, I said to this lad, before his foster father, that he must never run away again, that if he was not happy all that he required to do was to write to the Society and then if there was sufficient reason for such a course he would be removed. At the same time I assured his foster father, that, pressure of work, even though it were only a reasonable amount of it, was not calculated to make a boy who had only a street education fond of farming. The result is, that a few days ago a letter was received from this boy, stating that he was getting along well, that he liked his place, etc.

Visiting in another home, one of wealth and comfort, the foster parents of a little girl of 10 years, made several complaints as to general behaviour, etc. A conversation with the child and the manner in which she received a motherly caress convinced me that there was a lack of sympathy, and that no little tender attentions or endearments were interchanged. Very kindly I attended to this, and inquired from the mother if she ever gave the child to understand from an affectionate manner that she really loved her. The answer was, that though she had the welfare of her little girl very near her heart, and watched over her most carefully, she did not remember ever to have kissed her. In every respect this was a most excellent home, and after a friendly conversation a change of treatment in this regard was agreed upon and the result has so far been highly satisfactory.

The removals have been very few, not more than half a dozen, and these not because of cruelty or overwork, but on account of unservicable or inefficient training, uncongeniality or incorrigibility of child, inattention to schooling, etc.

The homes I have visited are on the whole first class. Most of them are found in the farming community, and the foster parents are thrifty, hard working people. These farmers as a rule own their own property, occasionally the farms are rented, and specially in the newly settled districts, others are struggling through difficulties to maintain a happy home with comfortable surroundings. Homes of wealth however, are numerous, and in all, with few exceptions the conditions are most favorable to the growth of the child in all those qualities which will conduce to the making of a class of men and women much above the average in sound common sense, morality, industry, integrity and independence.

Probably two-thirds of the children are adopted into homes where there are no children, and are taken simply to fill a vacant place in the hearts and homes of parents—to satisfy the craving for the love of children experienced in almost every home. In others again the children of the household are grown up and gone, or, there are several boys and no girl, or vice versa. In these cases there is no selfish purpose in taking the child, affection and the desire for child life in the home being the motive.

In the cases of older children the conditions are, that the child shall be sent to school if of school age, shall be sent to S. S. and Church, and shall in every respect be treated as one of the family, and it is the duty of the visitor to see that these conditions are observed. A few of the young people over 16 years of age are receiving wages—of this number many are happily placed, and are doing well, while the supervision of others is a matter of grave anxiety, and even perplexity, the closest watchfulness being required. In several instances young girls of seventeen or eighteen, have been followed from place to place, assisted with clothing when out of work and visited once or twice a month during the entire year.

Sincere thanks are given to the kind friends who have provided clothing for children coming to Toronto from country districts, and also to those who so kindly contributed to the fund for Christmas presents. About seventy-five gifts were sent to children, to whom, with the approval of foster parents, I had specially promised a reward for the correction of some fault noted at my visit.

A number of special investigations have been made. This is perhaps one of the most difficult and responsible parts of the work. My usual plan is to make my own personal observations, form an opinion, then consult ministers and other representative people in the community, in support or otherwise of the conclusion reached. In every instance the result of these personal observations has been confirmed, and the action has been in accordance with this view.

With grateful satisfaction, I allude to the fact that the officers of the various Children's Aid Societies throughout the Province have given me able assistance, warm support and kind attention in the prosecution of my work. This sympathy and friendly kindness has been very helpful, indeed without it, the results could not have been so successful. The work is rapidly developing, as will be seen by the increase of visits made during the past three years. The first year of my appointment, sixty visits were made, the second, two hundred and fifty; last year four hundred and twenty-five; these numbers do not include a second visit made to the same child. With eight hundred names on our supervision books, over six hundred visits must be made next year in order to meet the requirements of the work. It will be understood that a number of the children, especially those located in towns and cities, are visited by officers of the local Children's Aid Societies, by members of committees and other friends. Not much regular travelling can be done in the winter months, but by devoting the time from the end of April to the beginning of November, the ground can in all probability be well covered.

*Mrs. L. J. Harvie.*

#### NORTHERN DISTRICT.

The children placed in foster-homes in Manitoulin Island, were visited at my request by Rev. Jas. Lediard, of Owen Sound in June, 1898. In order to visit fifteen children he travelled 667 miles, and was occupied in this work fifteen days, Owing to the fact that the country was but partially opened up, travel was exceedingly difficult,—many of the roads being mere trails through the woods and over rocks. Mr. Lediard submitted a detailed account concerning each child. These were very satisfactory. All the children were found in the best of health and in the homes of respectable thrifty farmers, receiving all the care and attention of own children. A reported case of harsh treatment that was investigated during this trip was found to be without any foundation whatever, the boy being quite happy and the foster-parents exceedingly fond of him. One child was complained of as being very wayward, while in another case a little girl was reported to be mentally dull and making absolutely no progress at school. In other instances the happiest conditions prevailed, both children and foster-parents being mutually pleased with and agreeable to each other.

#### HOMES AVAILABLE.

Many more children could be placed in foster homes if additional time and trouble were given to this branch. The difficulty is that often when persons apply the exact child they require is not on hand and in a few weeks the desire

to have a child passes away and thus a home is lost. There are those also who have a longing for a child but who seldom make a real effort to obtain one. Such persons have to be sought out and their interest awakened in the good work they might do in providing for a little boy or girl. The field is practically illimitable and a notable thing is that some of the very best homes are those that have to be sought after and followed up until a child is actually transferred.

#### CHILDREN SENT TO THE NORTHWEST.

Several child-saving agencies of Ontario have from time to time sent children to the Northwest in the hope that removal from former surroundings and unworthy relatives would ensure brighter prospects for their future. The number has continued to increase, until there is at the present time a record of from seventy-five to 100 of these boys and girls who have been sent to the newer Province from Ontario within five years. The question arose as to how these children could be best supervised. Owing to the fact that the country is new and settlement scattered, the children are spread over an area of probably 2,000 miles, thus rendering it exceedingly difficult to arrange a system of personal visitation. There is also the danger that in a new country where civilization is only beginning to pioneer its way, the children may not have the opportunities for education and moral instruction that they would in an older country, and that, in addition, they might be required to perform work beyond their age or strength. But more important than all these objections, it was held by the Hon. Mr. Davis, the Minister in charge of this Department that the sending of so many children away to other Provinces was a direct loss to Ontario, since these children, if placed out here, would probably grow up to become members of the various communities and a consequent source of wealth to the country. While in exceptional cases it would be allowable to send a child outside the Province, still, as a general rule, the Government wished to urge upon the philanthropic organizations interested the desirability of placing children in Ontario, since there is admittedly a larger demand for such children than it has hitherto been possible to supply.

The following letter was therefore sent to some of the Societies as indicative of the policy the Government would be pleased to see pursued :

PARLIAMENT BUILDINGS, TORONTO.

July 6th, 1898.

DEAR SIR:—I am requested by the Provincial Secretary to write to the various child-saving agencies of the Province, pointing out the desirability of placing children in foster-homes or situations in Ontario in preference to any other Province. In addition to the difficulty of properly supervising the children sent out of Ontario, there is a direct loss to this Province of children, who on attaining their majority, would constitute the country's most valuable asset. There is a very large demand in Ontario for boys and girls, as is evidenced by the fact that

the British agencies have no difficulty in providing homes for over 1,000 children each year, and in nearly every instance the applicants would prefer native-born children. There may be special circumstances that might render it desirable or permissible that a child should be placed outside the Province. In such cases a communication of the particular circumstances should be made to this office and a certificate of approval would be issued.

Sincerely Yours,

J. J. KELSO.

IN the following pages will be found extended references to the work of the Children's Aid Societies, the Industrial Schools, and the Juvenile Immigration Societies; but before closing I would take the liberty of again emphasizing the value and importance of this work as a great public undertaking. It is worthy of the support and confidence of all classes, and if given a little more financial support than it has yet received, would accomplish untold good and at the same time reduce the heavy expenditure for maintaining the thousands of wretched and depraved people who through early neglect are now filling our public institutions. There are County Councils at present spending thousands of dollars to erect poor houses who grudge \$10 to pay the expense of looking after a neglected child, and who only pay when their legal liability is made clear; and wealthy men who contribute nothing to their local Children's Aid Society while liberally helping many other movements less useful in their character. This must all be changed or else child protection work will only continue to work along the outer edge of a great evil without being able to effect any radical change or improvement. With a union of forces and the necessary funds to sustain the work, a definite good can be achieved, and thousands of young lives helped in the direction of useful and happy careers. Let us hope that the coming year will see an advance all along the line, and many new friends gained to the children's cause.

NOTE.—A pamphlet giving the laws of Ontario dealing with Children's Aid Societies, Industrial Schools, Protection of Infant Life and Juvenile Immigration can be obtained free on application.

## THE YEAR'S WORK

OF THE VARIOUS

# CHILDREN'S AID SOCIETIES.

The following extracts from the annual reports of the various Children's Aid Societies—thirty-three in number—will give some information concerning the good work which those organizations are accomplishing both for the unfortunate children whom they aid and the Province generally. A greater part of the work of a Children's Aid Society must always remain unchronicled as it is preventive in character and cannot be reduced to statistics. Not long ago when visiting a town to assist in organizing a branch society a woman came along and offered to sober up and lead a moral life if the movement to form a Society were dropped. She had a little girl and was fully convinced that her profligate life had led to the meeting being called. An almost similar case occurred in a western town where a man who for years had been a bar-room loafer, living on the earnings of a long-suffering wife, went to work and supported his children the next day after a society was formed. Children who have been begging on the streets day after day for years have suddenly stopped their appeals when the parents have read in the papers of the new society, and some degree of cleanliness and decency have been introduced into homes that were foul and corrupt before. To know what the home life has been it is only necessary to hear the language and witness the actions of some of the children when first taken to the shelter. One boy of six who knew nothing else, could use the most dreadful profanity with perfect ease, while girls of eight and ten have displayed a familiar knowledge of immorality simply astonishing to the good women who subsequently took them in hand. A most surprising thing too, has been the number of children of advanced school

age who were unable to read or write, who had never said a prayer, and who had never received any of the ordinary moral instruction which is supposed to be given to all children. These are the children, who grown to manhood and womanhood, make our prisons and refuges so necessary, and if a Children's Aid Society can lay kindly hands on them before it is too late and turn their feet into paths of usefulness and honor—surely they are doing a work for the whole community worthy of the highest praise! But the support given to these societies in the past has been merely words. In no instance does a Children's Aid Society receive adequate support, while in several places the work has had to be given up entirely because sufficient money was not contributed to pay expenses. In one town where a splendid work for neglected children is possible, thousands of dollars have been sent away to heathen lands, while the contributions of the public to the Children's Aid Society totalled \$11 for the year and the secretary has had to pay the bills out of his own pocket. There are many good people ready to direct a work of this kind, but if the money is not forthcoming and they cannot support an agent they are apt to grow discouraged and give up altogether, turning their attention to other movements that are more popularly supported. Without a fair amount of money this work cannot be developed, nor its possibilities revealed, and if a few wealthy men would come to the aid of their local Children's Aid Society a beautiful, economical and permanent work for homeless and destitute children would reward their enterprise. These societies receive no government grant and they are the only philanthropic organizations that are not thus endowed. To those who are engaged in the actual work of child-rescue it is gratifying to observe how quickly neglected children respond to good influences. After a thorough washing, some new clothes, a few smiles and kind words, they throw aside their foul conversation, their lies and their bad habits, and develop a new life with amazing rapidity. The fact is that to the majority of these children a pure and decent life is more congenial than vice and filth, and the failures are in nearly every case among those who have got too old and too settled in their ways to be influenced by kindness and good example. They do not pine as many would suppose for former friends and surroundings, but often shudder and cry when the possibility of a return to former conditions is hinted at. Several surprising instances have occurred lately where children have strongly rebelled against going back to relatives, thus disproving the popular theory that the blood relationship will always rise superior to other attachments.

---

TORONTO.

As in past years the printed report of the Toronto Society is a thoroughly creditable production, showing a year of useful and beneficent work and outlining clearly the mission of the organization. The society's greatest need at present

is a suitable building in which to carry on its varied branches of work for children. Dealing as it does with neglected and destitute children, unclean in mind and body; with temporarily homeless but respectably brought up children; with sick and delicate children; with truant and police court cases of all ages and dispositions, it must be apparent to everyone that to secure proper separation and to enable the work to be carried on to the greatest advantage, a specially designed building is a necessity. Of all the public institutions of Toronto there is none capable of greater good to the community than the Children's Shelter, and no money can be spent more wisely than in providing the society with a well-equipped building. Owing to the fact that the Ontario Legislature was so closely identified with the legislation governing the society's work, there seems to be a vague impression on the part of the general public that in some way government funds are provided for the work. This is the greatest mistake imaginable, and the society was quite justified in making the following statement in its report:

"In order to remove a misunderstanding which seems to exist in regard to the relation between the Provincial Department of Neglected and Dependent Children and the society, it will be well to explain that the society is a body independent of the Department, and does not receive a Government grant. The relation of the Department to this and to all children's aid societies in the Province of Ontario is merely supervisory. It is the duty of this society to attend to all matters concerning neglected and dependent children coming under the provisions of the "Children's Protection Act" of Ontario and Criminal Code of Canada, within the corporate limits of the City of Toronto. It has no power to go beyond those limits; but from the very nature of city work, as so many families are constantly coming from other parts of the country to live in the city, the work done may be said to be of a character which affects the whole Province. This is still more apparent when the society's work of placing children in foster homes—by preference outside of the city—is taken into account."

During the past five years the children's aid societies have received no financial aid from the Government, the aim being to encourage the municipalities and private benevolence to support this laudable work. The Children's Aid Society is almost the only charitable organization in Toronto that does not receive a Government grant, but it is hoped that this will be more than made up by the generosity of wealthy friends of homeless or neglected children.

The branches of work included under the operations of the society are given as follows:—

① "First: To attend the trial of all children under sixteen years of age in the police court—which always takes place in private—and, as far as possible, by investigation of the home life of the children concerned, to assist the magistrate in determining what is to be done with them. In order that this be done thoroughly, remands are frequently made, and, when it is deemed necessary, the children, during the remand, are sent to the shelter, and not to the jail as formerly.

② "Second: To receive complaints of alleged cruelty to children or neglect of children and investigate these, and also look into cases where the destitution of parents makes it necessary to take action. In the cases of neglect and cruelty, if frequent remonstrance and warnings do not lead the parents to mend their

ways, information is laid, and they are brought into the police court, and the case is dealt with according to its merits, and when other means fail, the children are taken—it may be for a time or altogether—to be placed in other and better homes, where they will have a chance to grow up to be respectable citizens. The trials, it will be seen, do not always result in the children being taken from the parents, but in such cases they serve as warnings.

“*Third*: To receive children at the shelter from parents who are unable to control their offspring, and also—from the truant officers—those who have become confirmed truants and incorrigible. A short term of kindly but firm discipline often results in their going back to their homes to be a comfort, instead of a trial, to their parents.

“*Fourth*: To receive children by transfer from institutions—under a provision of the Ontario Act which makes this possible—and from parents, who for good cause, may find it necessary to give their children up with a view of finding homes of adoption for them

“*Fifth*: Under section 26 of the “Maternity Boarding Houses” Act—on notice from the Medical Health Officer—to pass upon all adoptions from maternity houses. Without the society’s approval of the homes chosen, the infants cannot be placed out. The carrying out of the provisions of the Act, when passed as a by-law in a municipality, rests with the Medical Health Officer and its enforcement in the city has already worked a great change for the better, both as to maternity houses and baby-farms.

“*Sixth*: To seek for and carefully select good foster homes for the children becoming its wards. On rare occasions troubles occur on account of the unsuitability of a home, but more often it comes through the unruliness of the child than because of the unkindness of the foster parents.

“*Seventh*: To co-operate with other institutions, both at home and abroad, for the help and protection of children.”

The tabular statements show that during the year the number of complaints and enquiries dealt with by the officers numbered 1,306; of which 878 were cases coming up in the children’s court and 428 cases reported at the office. These included complaints concerning drunken homes, children begging, petty offences, etc., and were disposed of as the varied circumstances suggested. During the year foster homes were provided for fifty-four children, making a total in foster homes since the society was organized of 199.

Sixty-seven children, instead of being taken to the cells on arrest, as was formerly done, were brought to the shelter and taken from there to the children’s court. Ninety-eight children, instead of being sent to jail while on remand, were sent to the shelter, where they were saved the disgrace that inevitably attaches to a prison.

“It is to be hoped that this feature of the report will be an encouragement to children’s aid societies throughout the Province, and societies dealing with children throughout the Dominion, to open shelters. Hitherto Toronto seems to be the only place in the Dominion where the provisions of the Criminal Code amendment have been taken up, which enacts that ‘the trials of young persons apparently under the age of sixteen years shall take place without publicity, and separately and apart from the trials of other accused persons, and at suitable times to be designated and appointed for that purpose;’ and that such young

persons 'arrested on warrant, or committed to custody at any stage of a preliminary enquiry into a charge for an indictable offence, or committed to custody at any stage of a trial, either for an indictable offence or for an offence punishable on summary conviction, or committed to custody after trial, but before imprisonment under sentence, shall be kept in custody separate from older persons charged with criminal offences and separate from all persons undergoing sentence of imprisonment, and shall not be confined in lock-ups or police stations with older persons charged with criminal offences or with ordinary criminals.'

"Without a shelter, it will be seen by the figures referred to in the above table, that the carrying out of the provisions of this amendment would be impossible. The municipal councils would soon find, as the city council of Toronto has found, that a liberal grant towards the maintenance of such a shelter would be true economy."

The society's income for the year amounted to \$6,716.26, made up largely of the city grant of \$3,500; general subscriptions, \$1,904; sabbath schools, \$536, and collecting boxes \$474.

The officers of the society are:

*President*: J. K. Macdonald.

*Vice-Presidents*: Wm. Oldright, M.D., W. Harley Smith, M.D., R. S. Baird H. R. Frankland.

*Treasurer*: A. M. Campbell, room 25 Confederation Life Building.

*Secretary*: J. Stuart Coleman.

*Agent*: John J. Graham.

*Hon. Solicitor*: W. B. Raymond.

*Committee*: Messrs. C. P. Smith, Robert Hall, C. J. Atkinson, Rev. P. Clifton Parker, T. Millnan, M.D., Rev. E. T. Fox, E. F. Clarke, C. D. Daniel, James Massie, James Scott, Mrs. Wm. Oldright, Mrs. J. J. Follett, Mrs. J. K. Macdonald Mrs. John I. Davidson, Mrs. C. E. Bateman, Mrs. S. G. Smith, Mrs. James Carlyle, Mrs. C. C. VanNorman, Mrs. James Ryrie, Miss Wardrop, Mrs. Eldridge Stanton, Mrs. John Lillie.

*Superintendent of shelter*: Mr. Samuel Wotton.

*Matron and chief nurse*: Miss Anna Gordon.

Address, Office, Confederation Building; shelter, 135 Adelaide street east, Toronto.

#### ST. VINCENT DE PAUL SOCIETY.

A report of the year's work of the St. Vincent de Paul Children's Aid Society of Toronto has been furnished me by the agent, Mr. P. Hynes. It states that during the year 298 cases were brought to the notice of the Society. Of these 165 were children appearing in the Children's Court, and 133 complaints made at the Society's office. The Children's Court cases were decided as follows: Thirteen lads were committed to the St. John's Industrial School; two to the Ontario Reformatory for Boys; two to the Mercer Reformatory; six to the Good Shepherd's Reformatory; five to the gaol; four were made wards of the Society; fourteen were discharged, and in seventeen cases the parents were fined. Ninety-three of the children were taken to the Shelter for short periods, and afterwards

allowed to return to their homes. A most important and valuable work was that done in connection with the complaints made at the office. By interviewing the parents and reasoning with the children themselves, much good had been brought about, and the necessity for further action obviated. The City Grant of \$500, supplemented by private contributions, had enabled the Society to carry on the work without serious loss. A change made during the year was the sending of the older and more hardened boys to the St. John's Industrial School for short detention pending enquiry into their home surroundings. Very pleasing reports have been received from the wards of the Society who have been placed in foster-homes in previous years. During the past year the work in the direction of finding homes for children has been very limited and some advance will probably be made in the coming year.

The officers are:—

*Patron*: Very Rev. J. J. McCann, V.G., Administrator of the Arch. Diocese of Toronto.

*President*: Remy Elmsley, Esq.

*Vice Presidents*: J. J. Murphy, Thomas Long, Dr. Wallace, Alderman William Burns.

*Treasurer and Solicitor*: Hugh T. Kelly.

*Secretaries*: Alex. Maedonnell, W. T. Kernahan.

*Assistant Secretary and Agent*: P. Hynes.

*Advisory Board*: The President, Hugh T. Kelly, Matthew O'Connor, P. Hynes.

*Committee*: Hugh Ryan, Eugene O'Keefe, Matthew O'Connor, Lawrence Cosgrave, Daniel Miller, Martin J. Burns, T. K. Haffey, John Rodgers, J. W. Mallon; Mrs. Remy Elmsley, Mrs. W. T. Murray, Mrs. W. O'Connor, Mrs. P. Hynes, Mrs. Trowman, Mrs. Madden, Mrs. B. B. Hughes; Miss Mary Foy, Miss S. Walsh, Miss H. Murphy, Miss M. Maedonell.

#### HAMILTON.

The last annual meeting of the Children's Aid Society of Hamilton was held on the evening of May 10, 1898. Mr. Adam Brown presided and stated that the work of the society was growing steadily, and its value and importance to the community was becoming better understood and recognized. The report showed that during the year nine regular meetings had been held and twenty-seven serious complaints of neglect of children had been investigated. In some cases the children had been temporarily taken charge of, while in others the parents were warned that the children would require to be better looked after. The prevailing cause of neglect was found to be drunkenness and laziness on the part of parents, with their attendant evils of dirt, disorder, lack of control and non-attendance at school. About thirty homeless children had been sent to foster-homes, eighteen of whom were girls. Six children were returned as unsuitable.

but in the majority of cases other homes were found without difficulty. One boy had to be sent to the Reformatory, while another ran away from his foster-home. During the year seventy-six applications had been received for children and the society found very little difficulty in suitably providing homes for the children ready to go out. The society had been working in co-operation with the charitable institutions of the city and had found homes for six children from the Infant's Home and four girls from the Girl's Home. Quite a number of children had been stopped begging on the streets and a marked improvement had taken place in this respect. The Secretary of the society had given valuable assistance at all times to the municipal authorities and charitable institutions in providing for neglected and dependent children.

Addresses commending the work to the liberality of the citizens were made by Mrs. Harvie of the Provincial office, Hon. J. M. Gibson, Rev. J. L. Gilmour, Rev. Father Brady, and Mr. W. H. Wardrope.

The agent and secretary, Mr. Wm. Hunter, reports that since the last meeting in May there have been three regular business meetings held. It was decided that during the holiday season no meetings should be held. Thirty-one neglected children have been dealt with, five of whom have been taken possession of by the society. Amongst other cases he cites one case of a woman who kept a disorderly house frequented by all sorts of drunken characters. An order was obtained for the custody of her two little children who were left to wander about day and night uncared for, the mother being drunk all the time. In another instance where owing to drunkenness the father made no effort to provide for his family, the society took care of two little children. Another case cited is one where the mother was a drunkard for years and her two children were allowed to wander all over the town dependent on the neighbors and kind friends for food and oftentimes for shelter for the night. These children were taken charge of. Eight children have been placed out in foster-homes and one incorrigible boy had been placed in the House of Providence. The report further states that there is no case of a neglected child coming within the knowledge of the society in which suitable action is not taken.

The officers of the society are :

*President* : Adam Brown.

*Vice-Presidents* : Col. Moore, W. H. Wardrope, P. D. Crerar and Dr. O'Rielly.

*Secretary and Agent* : W. Hunter.

*Treasurer* : J. M. Burns.

*Executive Committee* : Rev. Thomas Geoghegan, Dr. Rennie, Col. McLaren, Senator Sanford, George Rutherford, Hon. J. M. Gibson, ex-Mayor Colquhoun, J. F. Scriven, Mesdames Billings, Evans, Urquhart, Stewart, Lucas, Beasley, Gibson, Malloch, Misses Lawson and Duff.

## GUELPH.

The Humane and Children's Aid Society of Guelph has been steadily increasing its sphere of usefulness during the past year. The annual meeting which was held on the evening of October 25, 1898, was well attended and the audience was representative of the best elements of the city. Addresses were given by Mr. Adam Brown of Hamilton, and Mrs. Harvie of Toronto.

The report of the executive presented by the secretary, Mr. J. Sharpe, stated that nine children had been removed from very miserable and degraded surroundings and placed for a time in the Shelter, some of them afterwards being provided with foster homes. Efforts had been made to increase the knowledge of the society's mission, and in addition to a series of magic lantern lectures some two thousand pamphlets had been distributed giving information concerning humane work. Great difficulty had been experienced in knowing how best to deal with wayward boys between the age of ten and fourteen. It was impossible to send all these lads to public institutions and it was regarded as extremely dangerous to accustom them to the jail. The committee thought that power should be given to the Courts to order that young lads guilty of acts of vandalism, stealing, etc., should be punished by whipping, which was both an expeditious and efficacious remedy.

The Shelter on Waterloo avenue had been very successfully managed by Mrs. McRobbie, and the children sent there had been placed at once under the best of influence. Twelve cases of neglect and cruelty to children had been dealt with and several cases had been brought before the Magistrate for his decision. The total receipts for the year amounted to \$226. Of this \$121 had been contributed by the City Council, \$23 by the Fergus Council and \$48 by private contributions. This sum had not been sufficient to meet the necessary expense and much that was possible had to be left undone owing to the lack of financial support.

The officers elected were as follows :

*President* E. R. Bollert.

*First Vice-President* : Mrs. Thomas Goldie.

*Second Vice-President* : F. W. Galbraith.

*Secretary-Treasurer* : Joseph Sharpe, Business College.

*Committee* : Mrs. J. C. Chadwick, Mrs. Keleher, Mrs. Rowell, Mrs. Foster, Mrs. (Rev.) J. C. Smith, Mrs. Howitt, Mrs. Harrison, Mrs. Alexander, Mrs. Elliott, Mrs. Raymond, Miss Robertson, Girdwood, Miss Masters, Messrs. A. F. H. Jones, Alex. Stewart, M. O'Connor, Dr. Brock, Lieut.-Col. Higinbotham, Capt. Clark, T. J. Colwell, and the resident ministers of the city.

About the time of the annual meeting the Guelph *Mercury* published an editorial as follows :

“The work carried on by the Guelph Humane and Children’s Aid Society is one of the great humanitarian agencies of the present, and will be the greatest humanitarian agency of the future. To care for the aged and the sick is a great work; to care for the neglected child is a greater work. To save the heathen in foreign lands is a noble work; to save the heathen in our own land is a nobler work, because it means close and personal contact and greater self-sacrifice. Benevolence at long range is good, but benevolence at short range is better. The Guelph Humane Society, is lifting children out of the evil of bad surroundings and it is giving them a chance in good homes, to overcome the vicious hereditary tendencies to which they, through no fault of their own are born. The principle of Children’s Aid work is that the big home, or charitable institution, does not afford children the natural surroundings that a family, or foster home, does to train them for a decent living. Its work is therefore to give the neglected child, born to vicious habits and surroundings, a fair opportunity, in a suitable family home, to avoid being carried down to crime by its inherited tendencies. Save the children and your criminals will grow less. Put the money into child-saving and the cost of prisons will become lighter.”

#### STRATFORD.

The annual meeting of the Perth Humane Society was held on the evening of September 20th. Combined with it was a concert and magic lantern entertainment, illustrating the Society’s work. The program was so varied and the meeting was advertised so extensively, that the skating hall in which it was held was crowded to the door, fully sixteen hundred persons being present including many children. Mr. John Read, president of the Society, occupied the chair, and with him on the platform were Mayor O’Donohue, Mr. J. J. Kelso, of Toronto, Mr. William Buckingham, James O’Loane, Police Magistrate, and Mr. Battershall.

The report of the agent of the Society showed that during the year numerous warnings had been given to tobacconists and hotel keepers against selling tobacco or liquor to boys. Further warnings were sent to twelve different parties who were charged with sending their children begging and otherwise depriving them of their proper training. Two children were placed under the guardianship of the Society by the magistrate, and during the year seven children were provided with foster homes. Much good has been accomplished by the warning notice and also by assisting poor families to properly look after their children. Owing to the presence of the Society cases of extreme neglect or ill-treatment of children are becoming rare.

An interesting report on Band of Mercy work was presented showing how children in the schools could be interested in doing good to others.

Mr. Buckingham reported that Mr. Battershall, who a year ago made the Society a gift of \$500, had again made the Society a gift of \$100 toward providing clothing for children in poor families. These gifts had been much appreciated and had enabled the Society to greatly extend its usefulness. During the

evening a presentation was made to Miss R. McKenzie, the indefatigable secretary of the Society, who, unfortunately for the Society, was about to move to Toronto.

The officers elected for the year were as follows :

*President* : John Read.

*Vice-Presidents* : Mrs. J. H. Nasmyth, Peter Dierlamm, Mrs. Hyslop.

*Secretary* : Miss A. Wells.

*Hon. Solicitor* : J. J. Coughlin.

*Hon. Treasurer* : W. J. Ferguson.

*Ladies' Council* : Mesdames Iddington, Fraser, J. H. Nasmyth, Hyde M-Smith Colvin, W. S. Dingman, O'Connor, T. Trow, Hyslop, Megan, Brooker, (Dr.) Smith and Buckingham, (Col.) Smith and Buckingham, Misses J. Ballantyne, B. Hyde, L. Scarth, A. Wells, and Forman.

*Gentlemen's Council* : Messrs. Wm. Buckingham, James O'Loane, W. J. Ferguson, Dr. Steel, V. S., Duncan Stewart, J. Iddington, Q.C., J. H. Nasmyth, J. J. Coughlin, George Durst, Dr. Dunsmore, Dr. Clarke, V.S., W. C. Myers, D. Duggan, J. Russell Stuart, Wm. Battershall, Wm. Farrow, S. B. Webb, A. Waddell.

#### OWEN SOUND AND GREY COUNTY.

The annual meeting of the Children's Aid Society of Owen Sound and Grey County was held on the evening of November 4th, 1898. Mr. John Armstrong presided, and among those who addressed the large gathering were Judge Creasor, J. J. Kelso of Toronto, George M. Boyd, M.P.P., Rev. Dr. Somerville, Rev. Mr. Morton and James Lediard. The Board of Management reported as follows :

It is pleasant to be able to report another year of harmonious and successful labor and that the Society and its work are in a most satisfactory condition. What the ultimate effect of the year's efforts may be must be left with Him who alone knows the end from the beginning. The Society strives to discharge its duties, leaving results with an all wise Providence. However, the board of managers are conscious of this, that during the year now closed several young souls have been rescued from evil surroundings and placed in homes where they will have an opportunity of building up noble lives, and of fitting themselves to discharge the duties of intelligent Christian citizenship.

As the Society becomes more widely known the calls for help become more varied and frequent, so that the demands upon the time and attention of our agent, Mr. Lediard, are now almost continuous.

As will be seen from his report the Society has dealt with seventy-three cases during the year. Forty children have been admitted to the Society's Shelter, twenty-seven children have been placed in foster homes, and four children have been committed to some public reformatory or institution as incorrigibles, while two children have been committed to asylums owing to mental defect, and the officers are pleased to say that there are none of the Society's wards now in the shelter.

Some peculiar features of this child-rescue work come under the observation of the officers of the Society frequently.

THE "INSTITUTIONS" OF THE CHILDREN'S AID SOCIETY.

First.—The very early age at which a child may manifest the most vicious and depraved habits.

Second.—The very great difficulty in getting a child who has been an inmate of a public institution reconciled to become a member of a quiet rural family.

Third.—The paramount importance of constant and careful supervision of children in foster homes.

The report of Mr. Lediard will set forth very clearly the onerous duties which he has so satisfactorily discharged this year. The officers regret the loss of the services of Mr. Shouldice, the town agent, he having retired from the police force of the town. During the year Mrs. Herald, matron of the shelter, left town, and Mrs. Brown was appointed as her successor and has satisfactorily discharged her duties.

The treasurer's report submitted herewith shows the Society's finances to be in a most satisfactory condition. The total receipts for the year were \$658.04, total payments, \$494.80, leaving a balance on hand of \$163.24.

#### AGENT'S REPORT.

The agent of the society, Mr. Lediard in the course of a very interesting report said :

The number of cases coming under my notice and calling for attendance at the various police and other courts is larger than any previous year. In January I found four children in a state of great destitution and in very dissolute surroundings, with neither fire nor food in the place. They were very scantily clad and in a filthy condition. The father had deserted them and the mother was absent enjoying herself in her own way, without care or thought of the poor children. I laid an information charging neglect, and the children were committed to the Society's care. They are all placed in foster homes and doing well.

In April I was under the painful necessity of proceeding against an aged man for the abduction of one of our wards, a young girl of about 14 years of age, professing to have had authority from your agent to remove the child from her foster home. He was allowed to carry her away, which he did in the dead of night, and returned her to her very dissolute and abandoned mother from whom she had been taken. Whatever moral benefit the child had received was more than lost as the result of her intercourse with her mother, and on her return her depravity was so great that it was found impossible to place her in a home, and your agent secured her committal to the Industrial School for Girls. The trial of the prisoner who removed her from the foster home in which she had been placed, took place at the June sessions. The jury returned a verdict of guilty, but owing to the age and feebleness of the accused, he was allowed to go on suspended sentence, giving bonds in \$200 for better behavior in the future. The effect of the trial and the publicity given this matter did much to impress the public mind with the rights of the Society over their wards, and the serious consequences likely to follow any interference with them.

In May, at the request of the County Judge, I attended the trial of a boy charged with stealing. It was thought best by the Judge to give the boy a chance to redeem himself and I placed him in a good foster home, but he soon fell into more serious crime and it was necessary to send him to the Industrial School for incorrigible boys.

In June a boy came to me asking shelter. He was in rags, filthy and covered with sores. He was received at the Shelter, nursed and cared for. His case was

laid before the Magistrate, and he became a ward of the Society. He is doing well and earning his living, and although not very smart, is a new boy.

In October a young girl applied to me for protection from her father, and a complaint has been laid and a warrant charging him with a serious crime is out for his arrest.

My attention has also been called to the neglected condition of two little girls in the south of the County, and after investigation, a complaint was laid, but was afterwards withdrawn from the difficulty of getting evidence to commit, the unwillingness to testify on the part of neighbors being the cause of failure. The witnesses feared the destruction of their property. The children are two little girls aged respectively 4 and 8 years. They are ragged and filthy in the extreme and I trust we shall yet be able to remove them from their present miserable surroundings. In all I have attended 15 cases in the Courts this year.

Complaints leading to investigations have been numerous this year, both in the town and in the county, gross immorality amongst children in the county, smoking of cigarettes by small boys in town, neglect of school, begging in the streets, insubordination, and the like. By warnings, by appeals to parents, by threatening to prosecute, and by advice and counsel, a good effect has been produced in most cases, especially in the case of the immoral conduct of children mentioned.

My visiting this year has been specially satisfactory. In June I paid my annual visit to the children on Manitoulin Island, some twenty in number, and I take pleasure in saying that there is not a poor home or discontented child on the Island. The foster parents are all in good circumstances and the children giving satisfaction. Only to-day I have received several letters speaking highly of the children, and there are homes still awaiting when I can find suitable children to fill them.

In this county I have also visited many of the children. In the northern part of the county I had the pleasure of visiting in company with Mrs. Harvie the Government's Lady Visitor. The christian tact and thoroughness shown in her work is beyond all praise, and its beneficial effect on foster parents and children cannot be overestimated.

A fact in this connection I would like to fix in your minds is that in all our work here we have never had a case of unkind treatment by foster parents; no such thing is known to us, and out of about 100 children whom your agent has at one time or another visited we have not more than about 8 children who give us any real trouble, and much of this is the result of dullness rather than wickedness.

During the year two girls and two boys had to be dealt with somewhat severely. The girls were wayward and disposed to immorality, and consequently had to be removed from their homes, and are at present in the Industrial School for girls. The boys were selfwilled, idle, and frequently running away. They have both been placed in the Industrial School for boys. I can assure you that it is the most painful duty I have in connection with this work, when, after repeated trials, or the exercise of much patience, it is necessary to so deal with a child. I am thankful that it does not often occur.

Changes of circumstances on the part of the foster parents, friction in the home, or the unsatisfactory conduct of the child, has led to replacements in four cases during the year.

The number of homes offered for neglected children is on the increase, and there are more applications than we have children to place in them. A goodly number have been placed in homes this year for the Provincial Superintendent, Mr. J. J. Kelso, who is with us to-night.

The number of children placed in homes by the society this year is the highest yet—27 having been placed. The record stands as follows :

1895.....	4	children	placed	in	homes.
1896.....	8	"	"	"	"
1897.....	24	"	"	"	"
1898.....	27	"	"	"	"

Making a total of sixty children, taken mostly out of circumstances of poverty vice and crime, and placed in Christian and pure surroundings and given a chance to grow up a credit and blessing to the community. Who can forsee the results ?

The officers of the society are :

*President* : John Armstrong.

*First Vice-President* : Rev. A. Brown.

*Second Vice-President* M. Forhan.

*Treasurer* : Sheriff Moore.

*Secretary* : A. E. Trout.

*General Agent* : Rev. James Lediard.

*Homes Committee* : Mesdames D. A. Creasor, Bridgewater, J. W. Frost, M Galbraith, D. R. Dobie, Drs. Gray and Cameron, Messrs. A. M. Anderson, R. B. Miller, D. G. Shouldice, J. C. Ryan and Rev. R. Rogers.

*Shelter Committee* : Mesdames C. A. Fleming, J. Brebner, R. B. Miller, W. J. Shean and Dr. Gray.

---

#### COLLINGWOOD.

A branch society has been organized in Collingwood and a good deal of work has been accomplished in co-operation with the County of Grey. Rev. James Lediard, of Owen Sound, has visited Collingwood on several occasions in the interest of the work and I have also given an address during the year outlining the work of such organizations. The officers are as follows :—

*President* : W. A. Grieves.

*Vice-President* : M. S. Begg : Mrs. McCraney.

*Secretary* : E. Ward.

*Treasurer* : Mrs. Berniard

---

#### OTTAWA.

One of the progressive organizations of the province is the Children's Aid Society of Ottawa, which has made steady advance during the past year, and is recognized as one of the city's most useful philanthropic organizations. At the

annual meeting held in October last, the secretary and agent, Mr. John Keane, gave the following information in his report of the year's work :

During that time we have taken in charge 46 children. Of these 20 have been committed regularly by the presiding judge ; 8 have been voluntarily transferred to us by their parents or guardians and 3 have themselves claimed the protection of the society. 7 were returned to their parents by the order of the judge, (of these last, two were retaken and committed) and 9 are awaiting legal action.

The number of children in the different homes are now as follows : St. Joseph's Orphanage, 6 with 1 committed ; St. Patrick's Asylum, 9 with 6 committed ; Elgin St. Home, 5 with 5 committed ; Rescue Home, 3 with 3 committed ; House of Bethlehem, 2 with 1 committed.

There are thus some 16 awaiting homes, 3 of the children committed are on the express understanding that if their parents live a better life in the near future, they are to be given back to them, leaving 13 immediately available for placing out. 25 have been placed out in good homes and 2 cases are at present pending. 9 children are now awaiting legal action before the judge. During the year, two children were irregularly taken possession of by their mother ; 1 escaped from the home : 1 was placed with its parents on probation, and 1 died.

A very large number of families was visited during the year to urge upon the parents the desirability of greater diligence in looking after the children, when complaints were made as to their being neglected. Whilst it is to be regretted that in too many instances this did not seem to have much effect, yet on the other hand, quite a number were influenced in the right direction and the lives of the children rendered more tolerable by the fear that possibly they would be taken from their parents. The official notices still have a good effect when judiciously used.

Five children had to be brought back from their homes after being placed out, four because of the prolonged serious illness of their foster-parents and one because he was too young. Two of these were replaced in good families and another is on the eve of being placed in a good home.

During the year Mrs. Harvie, the Provincial visitor made a visit to this district and reported on quite a number of the foster homes where our children are placed. The report was of a highly favorable character and speaks volumes for the care with which a selection is made.

Blank forms and a new register have been prepared to assist in keeping a correct record of the children under our care as well as to facilitate the placing of children in approved homes.

Our President during the year has on two occasions made urgent and eloquent appeals to the public for additional support and interest in the working of our Society. It is to be regretted that so far the result of these appeals has not been satisfactory. A Society such as ours, having the best interests of children placed in our care as the first and chief consideration, is surely entitled to a much larger share of the public support and sympathy than at present it seems to obtain.

During the year owing to extended absence in Bermuda of Mr. H. B. Small, he tendered his resignation as President of the Society and Mr. W. L. Scott elected in January, 1898 to fill the remainder of the term. Mr. Small had rendered valuable service as president during his tenure of office.

Mr. Small also during the year represented the Society in New York at the National Council of Charities and Corrections with great ability and presented

a brief but able and valuable report on his return to the city. Mr. Small's wide experience in philanthropic work, his skill and enthusiasm as a writer was highly appreciated by the friends of the Society, for which he is entitled to our thanks.

The following are the officers of the Society :

*President* : William L. Scott, Esq.

*Vice Presidents* : Lady Ritchie, Mrs. F. McDougal, Mrs. Gwynne, Rev. Father Whelan, Rev. Canon Pollard, John Gorman, Esq.

*Hon. Treasurer* : John R. Armstrong, Esq.

*Secretary* : Mr. John Keane.

*Council* : Ven. Archdeacon Bogert, Sheriff Sweetland, Mrs. A. A. Frechette, Lieut. Col. Irwin, Miss Proctor, E. P. Stanton, H. B. Small, Miss Urquhart, Mrs. W. A. Leggo, F. R. E. Campeau, Miss Seymour, Mrs. E. A. Mara, Miss Sinclair, M.D.; Mrs. C. A. Gough, Mrs. Edgar, John Hardie, Ald. Wm. Campbell, William Ashe, I N. Vincent Mrs. B. Sulte.

Representatives from Protestant Orphans Home (2) St. Patrick's Asylum (1) St. Joseph's Orphanage (1) are entitled to be added to the above Council.

*Hon. Solicitor* : Mr. Chas. Murphy.

#### BRANTFORD.

The annual meeting of the Children's Aid Society of Brantford was held in the first week of February last, when a valuable report on the aims of the society was presented by the Secretary, Mr. S. M. Thomson. The following extracts are taken from it :

In presenting my fourth annual report it is pleasing to be able to say that some advance has been made all along the line. Your secretary would be still better pleased if he could say that more and better work had been done. I am convinced that there is still wider field to be covered than the Brantford society has attempted if the Gibson Act of 1893 is to be used up to its limits. Your secretary has had frequently brought to his notice and has visited and seen half-grown children, say from the age of 10 to 14 years, who have already learned many very bad habits and are assuredly in such surroundings as are not calculated to make them better but rather to drag them deeper into evil ways. But what to do with them is a puzzle to me; for various reasons they would be quite unfit subjects for our present shelter, where children of very tender years are kept. But some change where restraint of a reformatory kind would be placed upon them is, in my judgment, a necessity. Then there is the trouble of worthless parents, who spend their time drinking and carousing, who, if their children were taken and put in a local shelter, would make the life of the matron of the shelter a burden, so that it seems to me in most cases where children have parents or guardians from whom they must be forcibly taken that it is better at once to remove them from both the surroundings and locality.

I am well satisfied that the law, as we have it in Ontario, is along the right lines, and is about as well to the front as in any state in the Union or province in the Dominion. Indeed, I think for doing all round, good and effective work with the least outlay we are ahead of any of them.

During the year the police have been frequently called upon to give warning to parents and guardians and also to go with your secretary to different homes for the purpose of investigation, and I am glad to bear testimony to the ready response that all such calls have had from Chief Vaughan and his staff of constables.

The following statistics will give some idea of the work done during the year, although very much of it cannot be tabulated, for there are many calls and enquiries for assistance in various ways and some of the cases require much time and care to get settled: Fifty-seven applications for children have been received; eighteen children have been offered to the society for adoption; eight have been adopted by the society; four have been placed in foster-homes; seven have changed homes; two ran away from adopted homes; one boy was sent to the reformatory; one boy died; one boy at present in shelter; twenty are now in foster-homes, and seven reported to the society at its inception, making twenty-seven in all.

Ten meetings of the society were held during the year, and toward the expenses of the work the city council had granted the sum of \$250.

There have been fewer cases of complaint against parents and guardians than in former years, and your secretary hopes that this satisfactory state of affairs may continue. In this connection it is safe to say that the knowledge that this society will look after those who neglect, illuse, or illtreat their children, has had a wholesome effect on very many. We trust that in the year to come means will be devised that will discriminate and separate children who have been improperly trained and whose habits would have a bad influence over younger children.

Your secretary has been frequently requested to investigate cases and otherwise assist in different parts of the county of Brant and neighboring counties and has always readily responded in giving what advice and assistance he could. But when a personal visit seemed necessary, or other expense likely to be incurred, I have hesitated to use the money of the society for the purpose. The society is often asked by parties who do not reside in Brantford to receive and care for children by placing them in the shelter, but unless in very extreme cases this could not be done. In order therefore to enlarge the work and make it more and more useful it might be well considered if some arrangement could be made with the county officials whereby any case occurring within the county and requiring attention could at once be dealt with from one centre.

Briefly, my plans for the future would be as follows:

First.—To operate along the lines we have been doing in the past.

Second.—Classification and separation of children.

Third.—Extend the work by co-operating with the county.

Fourth.—Getting everyone interested in children to take an active interest in the society.

Fifth.—Creating greater interest in child-saving work by visitation and holding meetings in various parts of the county for the purpose of explaining the work of the society.

Sixth.—Securing closer co-operation among the various societies throughout the province, so that children may be readily moved from one place to another.

Addresses were given on the need of the work by Rev. Dr. Cochrane, Messrs. F. Cockshutt, W. B. Wood, Dr. Nichol, Mr. Kelso of the Provincial office, and others, after which the following officers were elected:

*President*: A. H. Dymond.

*1st Vice-President*: Frank Cockshutt.

*2nd Vice-President*: R. W. Robertson.

*Treasurer*: C. Cook.

*Recording Secretary*: T. F. Best.

*Corresponding Secretary*: S. M. Thomson.

*Honorary Solicitors*: Messrs. Harley, Sweet & Harley, and Messrs. Brewster, Muirhead & Heyd.

*Committee*: Dr. Nichol, Sheriff Watt, B. Hunn, W. B. Wood, John Mann, Rev. Father Lennon, Mrs. Dr. Cochrane, Mrs. A. Watts, Mrs. R. M. Fullerton, Mrs. Judge Jones, Mrs. G. S. Winter, Mrs. Whittaker, Mrs. S. Pickles, Mrs. C. K. McGregor and Miss Mackenzie.

### ORILLIA.

The annual meeting of the Children's Aid Society of Orillia was held in the Town Council Chamber on the evening of November 22nd, 1898, the Rev. Mr. C. J. Miller, presiding. Addresses were given by Mr. J. J. Kelso, of Toronto, and Mr. Sheriff Drury, of Barrie, others taking part being Rev. Canon Greene, G. H. Hale, Mr. Stephen Black and Magistrate Lafferty.

Mr. William Grant, who has been most efficient as secretary of the Society, since its inception, read the annual report, as follows:

"Another annual meeting calls for a brief account of the work of the past year in connection with the Orillia Branch of the Children's Aid Society. We desire gratefully to acknowledge that the course in life of those children who in the past years of the Society have come under its charge, still continue to give satisfaction, and a good return for the slight labor expended on their behalf. The prime thought of absorbing into happy home life the children who are taken over by the Society from time to time is still kept closely in view, and the results leave no room to question the wisdom of this plan of action. Whilst it may be argued that only a small proportion of those who apply for our children can be supposed to do so from the entirely pure motive of only seeking the child's welfare, yet we are ready to believe that even where the thought of securing cheap assistance from the services of these little ones, has influenced some, there has yet been a recognition of the obligation which is thrown upon all, to see that these little ones are in no way overburdened, or lose their proper place in the family relationship, but only have so much work as shall make their play a pleasure, and their lives expand to happy usefulness hereafter.

"During the past year seven children have come under the control of our Society. Of these, one is with relatives for the present, four have been placed in good homes in the vicinity of Orillia, one has been sent to a home in a more distant part of the country, and another has been allowed to return on trial to its mother, who has given assurances of a better life. Owing to the temporary residence out of town of the matron of our Children's Shelter, we had to find other accommodation, and placed the children in a suitable home till they were permanently provided for. The total number of weeks' board which the Society became responsible for on this account was 62, at a rate of \$1.50 per week. Of

this amount, however, \$1.25 per week was provided for in these cases by the County, under the order of the magistrate; the balance of this liability and all other expenses, such as clothing, travelling, etc., has to be met by subscriptions and voluntary contributions. Our temporary shelter is now empty, and our pleasant duty is to keep the children in view in their adopted homes. To avoid the purchase of new clothing for our children, we should be glad to hear from any one who could, when the need arises supply second-hand comfortable clothing for them. We acknowledge again the ever ready and kindly assistance of our newspaper friends in gratuitous work for our Society, and also thank other contributors who have assisted us in various ways. Above all, we confess the goodness of Him who alone can make our work a true success."

Mr. Grant's report as treasurer showed receipts from all sources \$51.05, which includes \$43.05 from the County Treasurer; expenditure, \$107.64, leaving \$53.59 due the Treasurer. These reports were adopted, but it was felt that the people of Orillia were not contributing liberally to this good work when their total giving was only \$11 a year, coming from five persons, leaving the treasurer to carry, in addition to his manifold labors in the cause, a rapidly growing balance on the wrong side of the ledger. The *Orillia Packet* reported the meeting as follows:

Mr. J. J. Kelso, Provincial Superintendent of Neglected and Dependent Children, spoke of what the Society, with its thirty or thirty-five branches throughout the Province, had been enabled to accomplish. It was a work in which the full results could not be seen or presented in statistical form. The first object was to improve the home-life of children. When parents were neglectful, the agent of the Society visited them, endeavoring to lead them to do better for their offspring—often successfully. Where from poverty or sickness they had not the means of keeping their children together, and affording them moral and healthful environment, the Society endeavored to place them in a position to do this. The primary object was to maintain and purify the family life. But if this could not be done, and the children were in danger of falling into sin and misery, they were taken away, and other homes found for them, where they were visited regularly, and if ill-treated, over-worked, or neglected, again removed. The proportion of foster-parents who proved unfaithful to their trust was very small, and of children who voluntarily returned to evil courses still smaller. The Society also aided in preventing the sale of liquor or tobacco to minors, and had the power of warning parents who were neglectful of their children in any way which might render them a menace to society, and should the parents not do better, of invoking the strong arm of the law. There were at present seven hundred and twenty children in foster homes, and one result was seen in the fact that the number of inmates of the Reformatory and Industrial School had been greatly reduced. Prevention was better than cure, and very much cheaper. Nearly one-third of the outlay of the Provincial Government was for the maintenance of institutions for the care and custody of the dependent or criminal classes, and that did not take into account the sums expended by the municipalities, or in private charity. The Children's Aid Society was not doing a work which attracted public attention, but each branch quietly doing a little in its own locality made up a glorious aggregate. It was a work that ought to commend itself to every town and district, and he thought the people of Orillia did not realize how beneficial it was or the funds for prosecuting it more effectively would be forthcoming. While the hepers, the heathen, and the savage in distant lands ought not to be neglected, the saving of the children of one's own country, and especially of one's own town, was the first claim—which from its very nearness and familiarity was too likely to be overlooked.

CONSTANTLY BEGGING.

Mr. Sheriff Drury said that he had come to manifest his interest in the good work carried on by the Children's Aid Society. He congratulated the Orillia Branch upon having such a zealous Secretary as Mr. Wm. Grant, and from personal knowledge could also testify to the good work accomplished under the superintendence of Mr. Kelso. He hoped the curfew law would be well enforced in Orillia, and parents compelled to keep their children off the streets at night.

Councillor Black was afraid the curfew law was not observed as it should be. The Council was taking steps to licence the sale of tobacco, in order to place the vendors under surveillance, and suppress the supplying of cigarettes to boys. He made the startling statement that he believed more liquor was sold to town-people in Orillia on Sunday than on any other day. The Police Magistrate ought to have the support of public opinion in the effort to put a stop to the sale of liquor to youths under twenty-one.—In reply to Mr. Black, Mr. Kelso said that parents who supplied or sanctioned the sale of cigarettes to their sons who were minors, could be dealt with by the law, but there were very few parents who would not help to prevent their children from injury in that way, if warned of the danger.—The Chairman said the Committee of the Town Council had decided to recommend three classes of licence: for the sale of tobacco, \$5; tobacco and cigars, \$10; tobacco, cigars, cigarettes and materials for making them, \$15.—On motion of Canon Greene, a resolution expressive of pleasure that the Council was moving in the matter of preventing the sale of tobacco and cigarettes to minors, and promising to uphold them in the effort, was adopted. A vote of thanks to the office-bearers and the Emergency Committee for last year, was seconded by Mr. H. H. Wilson, was unanimously adopted.

The officers for the year were selected as follows:

*President*: Wm. Thomson.

*Vice-Presidents*: C. J. Miller and George McKee.

*Secretary-Treasurer*: Wm. Grant.

*Agent*: G. Dreyer.

*Honorary Counsel*: F. G. Evans.

*Committee of Management*: Geo. Thomson, J. W. Slaven, W. I. Forbes, H. T. Blackstone, A. H. Beaton, M.D., J. H. Wilson, G. H. Hale, T. G. King, Dr. A. R. Harvie, G. A. Cole, Mrs. Wm. Todd, Mrs. Greene, Mrs. R. N. Grant, Mrs. H. M. Christie, Mrs. T. B. Lafferty, Miss Stewart, Miss Allen, Miss Overend, Mrs. Shire, Mrs. Burns.

---

## LONDON.

The work of the Children's Aid Society of London has been very progressive during the past year and the Society is now recognized as one of the most important philanthropic organizations in the county. The President, Mr. Sheriff Cameron, continues to take a great personal interest in the work, and the Society is fortunate in having a Board of Management, every member of which is deeply interested in the cause of child-protection. Mr. Joseph Sanders, the Society's general agent, has won the confidence of all classes by his judicious and painstaking efforts, not only among the city children but in dealing with a number of cases occurring in the country.

The annual meeting was held on Thursday, October 20th, and took the form of a reception to the Provincial Superintendent. It was attended by the leading citizens of London, and proved a very successful gathering. The various reports submitted gave the following information :

In his opening report the president says: "What is there so distinctive in the Children's Aid Society as to warrant its existence? There is much; so much that the features peculiar to it and that are outside of all other existing methods is more than a fair half of its entire work. This statement, while well known to the active workers, has to be reiterated in order to impress its aims upon the community among which it operates, and in order that everyone should know that the Children's Aid Society is practically the legal guardian of every child who is ill-treated, abused, encouraged in vice, prone to begging, and towards whom the parents are not discharging the duties of citizenship. It is, in fact, a "society for the prevention of cruelty to children," and much more. Under the Children's Protection Act of the Province of Ontario it has a corporate existence, and its officers are given wide powers in all cases where children are involved. Any case of neglect or cruelty towards a child, any case of begging by children, and cases where immorality exists, and where children are possible witnesses or participants come within the cognizance of the Society, and its officers can bring the adult transgressors before a magistrate, and on the facts being established the child or children are taken in charge by the Society and become its ward. The power for good possible under a discreet use of this statutory authority is immense, and the Children's Aid Society has the proud satisfaction of knowing that while it has never been accused of the abuse of these very wide powers, it can point to cases, neither few nor unimportant to those concerned, where the life and prospects of the children were made brighter by the intervention of the Society's executive. The threat that the parents would be deprived of their children unless the parental duty to these was more rigidly respected has led to improvement where all else had failed. In this direction the Society has ample scope for the exercise of the very wide powers conferred upon it by statute. But I have this to say: It is only when it is useless to hope for improvement that the Society exercises its reserve authority and takes the children for which the parent manifestly lacks a parent's regard. A writer on this subject forcibly says that "a parent who will not perform the duties of a parent should not have the rights of a parent," and I have no hesitation in saying that parents who are wilfully negligent, dissipated or criminal, should lose all claim to their children. The interests of society demand that children should be at once removed from immoral homes; the moral safety of a child is a greater consideration than the legal rights of a depraved parent. The Children's Protection Act of Ontario has proceeded on this assumption, and when this stage in a child's career is reached, when the Society finds its warnings unheeded and the profligacy of the parent threatens the moral well-being of the child, it then follows the only remaining alternative and accepts the child as its ward.

The Secretary and Agent in his report strongly urged the need of a properly equipped shelter and refers to the fact that quite a number of juveniles had to be kept in the gaol, with all its hurtful associations owing to the absence of suitable shelter accommodation. A discipline of a week or two in a shelter managed by judicious persons would often save a boy or girl from giving further trouble and would thus be a great public boon. During the year nineteen children had been placed under the guardianship of the Society by the Courts, twenty had been transferred by relatives of the children, and six had been received from Societies. In addition to these there were 56 boys and 5 girls brought before

the children's court for breaches of the law, and the agent gave assistance in disposing of these matters, with a view to preventing further wrong-doing. Forty-three dependent children had been provided with foster homes and several children who required to be changed were again placed. Reports had been received showing that these children were doing well, and growing up to become useful citizens.

The Treasurer's statement showed that the total receipts for the year were \$1,057.05. This was made up largely as follows: Proceeds from entertainment \$288.50 (placed to shelter account); subscriptions from citizens, \$376.75; City Council \$150; County Council \$142; Kent estate, \$50.

The officers of the Society are as follows:

*President*: Mr. Sheriff Cameron;

*Vice-Presidents*: F. W. Matthews, T. R. Parker, V. Cronyu, Mrs. Yarker.

*Treasurer*: Mrs. J. I. A. Hunt.

*Secretary and Inspector*: Joseph Sanders.

*Honorary Photographer*: Frank Cooper.

*Honorary Solicitors*: Messrs. Magee, McKillop and Murphy.

*Board of Management*: W. H. Wortman, Andrew Thompson, J. I. A. Hunt, Prof. Harrison, T. B. Escott, C. B. Keenleyside, Ald. Jolly, Ald. Graham, Mrs. Talbot MacBeth, Mrs. Tilley, Mrs. J. Beattie, Mrs. M. J. Kent, Mrs. P. Mulhern, Mrs. B. B. Mitchell, Mrs. H. A. Boomer, Miss Annie Long.

#### PETERBORO.

The Children's Aid Society of Peterboro'—one of the first organizations of the kind to be formed in the province—continues to do a good work, and is meeting with the support and endorsement of the citizens of Peterboro'. The Society maintains a Shelter, and has an agent who gives a good deal of time to the investigation of complaints, and in looking after such wayward boys as find their way into the Police Court. I have visited and addressed a couple of meetings in this city during the year, and have found the officers anxious in every way to promote the best interests of the work. The Police Magistrate has also given a good deal of consideration to the best methods of checking juvenile wrong-doing, and has adopted with success a plan whereby the parents are required to give their boys who have been found guilty of an offence a good whipping before they leave the premises. A punishment of this kind has been found more effective in stopping youthful depredations than the practice of sending the lads to the police cells or the gaol.

*President*: Mr. J. J. McBain.

*Vice-Presidents*: Mrs. J. Ames Kendry and Mr. A. C. Dunlop.

*Secretary-Treasurer*: Miss Clarke.

*Assistant Secretary*: Mr. F. W. Miller.

*Solicitors*: Messrs. E. B. Edwards and R. M. Dennistoun.

*Board of Management*: Mrs. Birdsall, Mrs. J. W. Garvin, Miss Gow, Mrs. Beck, Mrs. A. L. Davis, Mrs. G. B. Ward, Mrs. O'Sullivan, Miss Martha Dickson, Mrs. Beck, Rev. Father Scanlan, Rev. Dr. Torrance, Rev. H. Symmes, Messrs. W. B. Bamford, P. Campbell, J. H. Burnham, Rev. J. C. Davidson, Mayor Davis, Rev. S. J. Shorey, Rev. D. O. Crossley, T. F. Matthews and Rev. J. G. Potter.

The Secretary writes as follows: One of the chief features of the work in Peterboro' during the year is the amount of personal work that has been done. Between forty and fifty families—among the poor and unfortunate—have been regularly visited—many of these dozens of times, when necessary clothing, boots and shoes, even food has been supplied them. Forty-one juvenile offenders have been up in our police court during 1898—a large showing for Peterboro', and a showing which made it necessary for us to take steps to lessen these delinquencies. The assistance we have given to parents to keep their children at school, and the personal interest we have taken in these children, has materially thinned the ranks of our youthful criminal classes. It was during this year that the rule was agreed upon here, that no children should be confined in the ordinary police cells or have their cases disposed of in the police court rooms. Two boys have been sent from here to the Industrial School, Mimico. Of the three unfortunate girls we have been called on to succour, one, under 16 years of age, is again an inmate of her father's house her married sister assuming the temporary guardianship of the child, with certain assistance from the Society. The second is in a Rescue Home, where she remains until her child is born; we, in the meantime, furnishing all necessary clothing. The third was recently married to the father of her child. A girl, herself illegitimate, came here a couple of months ago from a neighbouring town with her two-year-old child. She was very destitute, and we kept her in the shelter for a time. As she proved to be lacking in intelligence, a half-paralytic, morally depraved, without friends, we had her committed to the Mercer Reformatory. We, at present, are caring for the child.

Evening classes for young girls have been carried on by the Society since the early fall. They have necessitated a great deal of work and patient loving-kindness on the part of those conducting them. The Society's Christmas festival, a wonderfully successful entertainment, grew out of our desire to commemorate in some way the Christmas season for the girls of these night school classes. The criminal and the mendicant, the poorest and the most depraved, all found a place and a welcome at the Society's entertainment, while the enthusiasm with which the citizens of every class and creed threw themselves into the necessary preparations for it indicated the good hearts of the populace and their confidence in the wisdom of the Society's undertakings.

An important work of the Society is the making up and making over clothing, bedding, etc., for destitute families. A large amount of this work has been done this winter. A packing case full of clothing and bedding was sent last Thursday to a poor district. The Society has distributed between thirty-five and forty pairs of boots among poor children of school age in the town and county. Still, while every encouragement and assistance has been given to parents to enable them to bring up their own children honorably, in certain cases we feel that patience will soon cease to be a virtue. Some men are proving them-

selves incorrigible. Out of work every now and then, drinking to excess, their children half-naked and bare-footed but for us, they still cling to their families and promise and intend reform, and do well for a time. We will have to take action in the case of certain families almost immediately.

Children transferred to foster homes, 19: two of these were returned and placed out again. The Society has dealt in all with 79 cases: Juvenile offenders in police court, 41: children received into shelter, 31: children received into shelter more than once, 1: children received into shelter more than twice, 2; Warnings sent to parents, 11.

### CHATHAM.

The annual meeting of the Children's Aid Society of Kent County was held on the evening of January 12th, 1899, and the report was received at this office just before going to press, Dr. Holmes the President occupied the chair and Mrs. J. W. Shackleton read the report of the year's work as follows:

In presenting the annual report of the work of the society coming under the eye of your executive officer it will be seen that although something in the direction of child saving has been effected, still there is room for willing workers in a cause where much, not of the most agreeable nature, but no less a necessity, may be accomplished.

The present report does not include work which has been done by auxiliary committees in outlying districts, except in Camden. There has been some work in Dresden, where a good committee was formed, and now as an incorporated society is doing good work and acting in conjunction with the County Society. For the Blenheim district there is much work, but the committee require to be re-visited and urged to get on a working footing.

In fact, the only outside committees which have as yet got to work are those of Dresden and Thamesville.

Fifty-two children have come under the influence of your society, eighteen being boys and thirty-four girls. Of this number eighteen were taken over by the society and eight were found homes without outside assistance, and five were directed to foster homes through the assistance of the London and Toronto societies: while in return six children from without the county have been found homes within our district.

There are at the present four wards of your society who are not in its custody, having left the county and got beyond your jurisdiction. These it is now learned, have returned to the county and will shortly have to be looked after. One child, who is about to be voluntarily surrendered to the society, is now being clothed by the Thamesville committee, and four others will have to be taken from that section at once; there being three cases now under consideration, involving in all eleven children coming under the head of neglected or dependent.

About fifty applications have been made during the year for children besides requisitions from sister societies for children to fill homes in their districts. Among these applications are to be found some most excellent homes ready to receive foster children, and the fact should go far towards removing the objection

that is so often raised by municipal and other officials who erroneously suppose that the handing over of children to this and that kindred society may become a source of expense to their respective municipalities. It has been said that there are hundreds of children within the jurisdiction of your society, who are at present existing in surroundings from which they should be removed and to make them a charge upon the municipalities by such removal would excite much opposition on account of expense, but when it is apparent by the applications coming in that many of these children could be installed in good and pure homes almost without cost the matter is much simplified and the cause for opposition entirely removed.

One hundred and eighty-nine visits have been made note of during the year and 108 letters written.

The cases now in hand include three girls, ages respectively 15 years, 13 years 13 months, and a boy 2 years of age. The latter should go at once to a hospital and the two elder girls into some place of special restraint where they shall receive firm treatment.

One case embraces a family of four children. The mother while not depraved appears to be of weak intellect and a widow. She is not willing to let the children out of her charge, but is totally unable to properly provide for or clothe them. It is very distressing matter requiring careful thought by your society. One city family of whom complaint has been made includes possible wards but up to the present the evidence is not conclusive.

In explanation of the account presented from the London Aid Society, it may be stated that it was found necessary in the matter of the children for which the charges are made, to remove them from the vicinity of Chatham, and while litigation was going on it was thought prudent not to send them to foster homes until a final decision was arrived at. For that reason they were taken to London. The amount of the account for board may be collected from the township in which the case arose, and that township may recover from the parent.

To the London and Toronto societies are due the thanks of this society for the offers of assistance in getting homes for our children and general willingness to co-operate with your society in child saving.

In conclusion, the report would not be complete without a reference to the need for the organization of a clothing committee, which should receive, make and keep on hand, clothing of all kinds ready for the children of the society, as much time is often lost in fitting out these children, most of whom have to be provided at once with complete outfits, nothing whatever of their former clothing being fit to find a place in the wardrobe of the child after it has become a ward of the society.

The following officers were appointed for the ensuing year:—

*President*: Dr. T. K. Holmes.

*Vice-Presidents*: H. Macaulay, D. S. Paterson, J. S. Butler and Dr. W. H. Tye.

*Executive Officer*: Dr. R. V. Bray.

*Treasurer*: Fred. Stone.

*Honorary Solicitors*: S. B. Arnold and J. G. Kerr.

*Constable*: W. J. McRener.

*Auditor*: C. E. Beeston.

*Council*: Mrs. C. L. VonGunten, Blenheim; Mrs. J. W. Sharpe, Dresden; Mrs. Geo. Langford, Kent Bridge; Miss Mason, Thamesville; Miss Drury, Charing Cross; Mrs. John McGregor, Tilbury; Mrs. Jno. Sheppard, Bothwell; Mrs. J. W. Steinhoff, Wallaceburg; Mrs. R. G. Fleming and Miss Ryan, city.

*Advisory Council Board*: Chief Wm. Young, M. Wilson, Q.C., H. Macaulay,, Ed. Langford and A. L. Shambleau, city; Jonas Gosnell, Orford; A. M. Mason Camden; J. A. McGregor, Tilbury; R. J. Morrison, Raleigh.

---

#### DRESDEN.

In connection with the work of Chatham, Mrs. Shackleton and other members of the county society were able to create some interest in children's work in other parts of the country. In Dresden, particularly, quite a number of the leading citizens manifested a desire to have a branch organization, and several meetings were held for this purpose. On October 21st last, I visited Dresden and gave an address outlining the work of the society. It was then decided to organize, and at a subsequent meeting held Nov. 3rd, officers were appointed.

Several cases of children who were being allowed to grow up in great neglect and without any control on the part of their relatives have been engaging the attention of this branch, and a foster-home was found for a lad who was left destitute.

The officers are;

*President*: Mr. Charles Tassie.

*Vice-President*: Mr. James Carscallen.

*Secretary-Treasurer*: Mrs. F. Sharpe.

*Honorary Solicitor*: Mr. J. F. Sharpe.

---

#### WINDSOR.

The Society organized in Windsor some years ago has not been so active during the past year as formerly, owing probably to the fact that two of the most useful members of the Board of Management had removed from the city. The Society has a very active agent in Mr. J. P. McEwen, but the lack of funds and systematic organization has made it difficult to accomplish all that was possible. Owing to the proximity of Detroit and to the presence of a considerable coloured population the need for child-protection work is probably greater than in many other districts and there is certainly need for an organization of this kind. As the Society is not in a flourishing condition it naturally follows that the Carey Home for Destitute Children has no inmates and is now being used for other purposes than was originally intended.

I had the pleasure of meeting some of the friends of the work during a visit to Windsor on October 24th, 1898, and have good hopes that ere long some plan of reorganization will be decided upon that will insure the more vigorous prosecution of the work.

#### KINGSTON.

The Children's Aid Society of Kingston, which in former years accomplished so much good work, has not been so active during the past year and very little was done in the direction of providing foster homes for children or inquiring into cases of neglect. There are two reasons for this: The Secretary and agent of the Society, Rev. J. R. Black, retired from office and it was found impossible to secure any one to take his place. Another reason was that the Society was associated with the Infants Home and all the funds were absorbed in paying for a large building, leaving no money with which to engage in actual child-protection work. Quite recently it has been decided to completely separate the Society and the Infants' Home as the two movements are dissimilar. The work will, however, continue in friendly co-operation, as the ladies on the Board of Managers of the Infants' Home have from the first been the warmest friends of the Children's Aid Society.

The chief members of the Men's Committee are: Mr. E. J. B. Pense, editor of the British Whig; Mr. G. M. McDonnell, Q.C.; Prof. Dyde, Queen's University, and Mr. J. R. Black, editor of the Times.

#### SARNIA.

The Children's Aid Society of Sarnia and Lambton County was organized at a public meeting held in the Council Chamber, Sarnia, on Friday evening, October 28, '98. Rev. E. Medd, Ph.D., was elected chairman of the meeting and Mr. R. T. Maxwell, secretary. After an address had been given by Mr. J. J. Kelso on the "Aims and Purpose" of such organization, a resolution was unanimously adopted on motion of Mr. J. G. McCrae, seconded by Mr. W. H. Minifie, as follows:—

"That a Society be now formed to be known as the Children's Aid Society of Sarnia, having jurisdiction in all parts of the county of Lambton, with the following objects: To protect neglected, abandoned or orphaned children; to provide such children as may be lawfully committed or entrusted to the Society with suitable homes in private families, and generally to advocate the claims of neglected, abandoned or orphaned children upon the sympathy and support of the public."

The meeting was a very representative one and great interest was manifested in the cause of homeless and neglected children. After a general discussion the following officers were elected:

*President*: Dr. A. McLean.

*Vice-Presidents*: J. Ross Geddes, J. C Douglas, R. E. LeSueur, J. W. Wilkinson.

*Treasurer*: F. C. Watson.

*Secretary*: R. T. Maxwell.

*Solicitor*: F. W. Kittermaster.

*Board of Management*: Rev. E. Medd, Ph.D., J. G. McCrae, H. Ingram, Dr. W. Logie, H. H. Ogden, W. F. Lawrence, T. Maxwell, David Stokes, W. B. J. Williams, J. E. Bush, Mrs. W. F. Lawrence, Mrs. R. Kenny, Mrs. D. Clark, Mrs. G. L. Phillips, Mrs. John Dyble, jr.; Mrs. John Brebner, Mrs. H. Ingram, Mrs. T. Houston, Mrs. T. F. Towers, Mrs. A. McAlpine, sr.

As an indication of the general interest taken in the movement, the Town Council granted \$50 toward expenses without waiting for the formal organization of the Society.

---

#### COLBORNE.

Very little has been done by the Children's Aid Society of Colborne during the past year and the secretary, Mr. H. J. Foik, writes in explanation that there is now very little to do in their neighborhood. The aggressive work which marked the beginning of the Society's operations has produced a salutary effect. Several families who had been giving trouble for years moved away when the Society was formed, and others improved their manner of life when the Society's agent called their attention to the law.

---

#### BROCKVILLE.

The annual meeting of the Children's Aid Society of Brockville was held on the evening of Dec. 5th, 1898. Mr. Sheriff Dana presided, and after an address had been given by Mr. J. J. Kelso, of Toronto, a discussion of the work was participated in by Judge McDonald, Rev. Dr. Ryckman, Rev. O. G. Dobbs, Rev. J. C. Sycamore, A. B. McDougall, and Mr. James Burges. The annual report of the agent, Mr. Chas. Rose, was addressed to the president, Mr. F. G. McCrady, and read as follows:

DEAR SIR,—Some two years ago the Children's Aid Society of Brockville was formed, or rather re-organized, and you had the honor of being appointed president, a duty you have faithfully endeavored to discharge, and been willing at all times to devote part of your valuable time to help the good work, but it is impossible for one or two to do all that is required to be done by a Children's Aid Society, and I am sorry to have to say it of our Christian workers in Brockville, but they have shown a very lamentable lack of interest in this good work of child saving. As you are aware sir, you have called meeting after meeting of

this society, with the result that we have never had over two or three people to attend at any one time, and but for your own enthusiasm and that of a few others, among whom I would specially mention His Honor Judge McDonald and Rev. Mr. Dobbs, the good work done by this society during the past two years, would not have been accomplished. At one of the first meetings of this society, it was said by one of our clergymen, that he could not see any use for such a society, as we had no children in our town who needed to be provided with homes. That statement sir, was a dangerous one, and coming from one of our ministers of the gospel, may have had something to do with the lack of enthusiasm shown by our people in this good work. To prove to you sir, and to the Christian people of Brockville that such a statement was incorrect and misleading, I have only to state, that during the past twelve months this society with the help of J. J. Kelso, superintendent of neglected children in Toronto, have taken and provided with good homes, eleven children ranging from three to fourteen years from parents totally unfit to have the bringing up of our future men and women, and who by their neglect were bringing those children up to lead idle and dissolute lives, and they would in all probability in after years become a charge on this municipality as criminals.

I claim, sir, that there is always work for this society to do, not only in providing homes for destitute children, but for a good active committee to visit homes where children are being raised in such a manner that will make them bad members of society, to encourage such parents so bring up their children in a more fitting manner and to help the children by providing clothes, etc. for them so that they may be able to go to school and associate with companions of their own age, without that feeling of shame which young children have when miserably clad and badly dealt with at home.

I do not know sir, that I can add anything further as I feel satisfied, that if my suggestions are carried out, the public of Brockville will see for themselves, that there are many cases of destitute children both in the town and country, that need the aid of a Children's Aid Society which a good active membership could give.

I do not wish sir, to say anything of my own work further than at all times I have promptly endeavored to do what I thought was best in the interests of children brought under my notice as being children that should be looked after by this Society.

Through you sir, I wish to thank the ladies of St. Paul's church for the very handsome manner they responded to my call for clothing for three little girls I sent to adopted homes a short time ago.

The officers of the society are:—

*President*: F. G. McCrady.

*Vice-President*: Sheriff Dana.

*Honorary Vice-Presidents*: Residents pastors.

*Secretary-Treasurer*: A. D. McDougall.

*Agent*: Chief Constable Rose.

*Hon. Solicitors*: E. J. Reynolds, D. O'Brien.

*Committee*: To consist of one lady from each congregation to be named by pastors of respective churches.

---

---

WALKERTON.

Another Society added to the list during the past year is the Children's Aid Society of Bruce County, with officers in Walkerton, the county town. In the early part of the year Rev. James Lediard, of Owen Sound, gave an address in Walkerton, on the need of child-saving work, and on the evening of November 4, 1898, at the request of a number of influential people, Mr. J. J. Kelso visited Walkerton and assisted in the formal organization of a Society. The meeting was well attended and all present strongly favored the proposed movement.

At a subsequent meeting the following officers were elected :

*President* : A. Shaw.

*Vice-Presidents*: Rev. S. F. Robinson, Joseph Morgan, Michael McNamara, Thomas Whitehead.

*Treasurer* : W. E. Butler.

*Secretary* : E. J. Rowland.

*Honorary Counsel* : S. H. McKay, and A. Collins.

In addition to the above the following citizens signed the application for incorporation: J. McMillan, L. M. Robertson, Mrs. H. B. May, Mrs. William Collins, J. Morgan, Rev. Jas. A. Banton, E. M. Butler, L. H. Marr, Miss Crawford, J. A. Robertson, Mrs. D. Sinclair, Miss Klein, Miss Roether, Mrs. Birss, Mrs. Keeling, W. S. Gould, Mrs. Witton, Mrs. Thos. Law, Mrs. Marr, Mrs. Lount, and Mrs. Flett,

---

PARIS.

The annual meeting of the Children's Aid Society of Paris was held in the lecture room at the Congregational church, Paris, on the evening of February 3rd 1898. While there were not many children in Paris requiring the attention of the society valuable assistance had been given the other organizations in visiting children in their foster homes and in placing homeless children. Mrs. Harvie, of Toronto, was present and gave an address on the work.

The officers of the society are :

*President* : Mrs. Emma A. Wheeler.

*Vice-President* : Mrs. S. O'Neil.

*Secretary* : Mr. Lewis Maus.

*Treasurer* : Mr. David Brown.

One case brought before the Society at a special meeting was that of a child of an unmarried young woman, who found it very hard to support the infant upon the small wages she was earning as a domestic. The Society decided to aid her by seeking an adoptive home, and for this purpose enquiries were made, and three applications were received. Two women were each in favour of adopting the child, but the husbands were not willing. In the other case a man was anxious to take the child, but his wife was not. The matter is therefore not yet definitely arranged, and in the meantime the board of the child is being paid. An advertisement has been occasionally inserted in the local papers informing the public that cases of neglect will be enquired into, and also that foster-mothers are desired for dependent children.

## LINDSAY.

The Children's Aid Society of Victoria county has been doing what it could during the past year to ameliorate the condition of neglected and dependent children. The secretary, Dr. Herriman, writes that the full effects of the work will be seen in years to come in the useful and happy lives of the boys and girls whom the society has helped. Not only have the children been benefitted, but the secretary adds that the active members of the society have also been made better by the knowledge of the good work in which they were able to have a part. One extreme case in which the society took action was that of an unmarried woman, a domestic, who had four children for whom she was entirely unfit to provide. These children were removed from the filth and squalor of a wretched abode by the magistrate's decision, and have all been provided with foster homes in other parts of the province.

Another case was that of a poor lad about ten years old charged with vagrancy before the county magistrate. He had been completely abandoned by those who should have cared for him and was wandering from place to place. The magistrate consigned him to the care of the society, and within an hour or two after the secretary had arranged a good home for him. A weak-minded lad whose mother was also mentally defective and incapable of giving him anything like proper care, was growing up a nuisance in the community. The society took hold of the case and arranged for his admission to the Ontario Asylum for the feeble-minded at Orillia. The sad case of a mother and wife demented through drink and bad treatment which caused her to be placed in an asylum, engaged the sympathy of the society for two young children who were left in great neglect. The father, who is addicted to drink, did not care for them, and while the society has been helping to provide for them, it is likely that before long they will have to be taken full charge of. Through the co-operation of the central office and other societies good homes have been found for a number of children who were entirely destitute. At present the society has on hand a bright, sharp, intelligent boy, about six years old and also an infant.

*President*: Mr. J. H. Knight.

*Vice Presidents*: J. Hore, Dr. White, Thomas Brady, D. Ray.

*Treasurer*: Mrs. Trew.

*Secretary*: Dr. Herriman.

*Assistant Secretary*: Mrs. E. E. Sharpe.

*Honorary Solicitors*: Mr. J. McSweyn; Mr. William Steers.

*Council* of ten gentlemen and ten ladies: Mgr. Laurent, Revs. Messrs. Marsh, McMillan, Macfarlane, Manning, and Hughson; Messrs. E. Bowes, E. Flood, James Keith, and F. C. Taylor; Mesdames Keenan, Whiteside, Weldon, Fee, Mitchell, Bolger, Campbell, Stephens, McLennan, and Miss M. J. Whiteside.

*Auditors*: Messrs. A. Campbell and R. B. Allan.

## GALT.

In giving the proceedings of a meeting of the Children's Aid Society of Galt, "The Reporter" of that town said: "It is probable that the Children's Aid Society will co-operate with the Municipal Relief Society in bringing about some radical changes in the present condition of affairs. The matter of children playing truant from school was discussed at great length. It is a very difficulty matter to get into working order a plan to put a stop to the practice which is apparently increasing in Galt. The difficulty in all the cases which have come immediately under the notice of the Children's Aid seems to lie in the parents having little or no control over their children. Some of the speakers were emphatic in their belief that corporal punishment judiciously applied was the only effective solution of the difficulty. This state of things is greatly aggravated by a large number of lads between 14 and 16 years of age who are not working do not go to school and who use their influence to keep younger boys away from their studies. If some legislation could be introduced to compel these larger boys to go to school when not employed it was believed that a big step in the right direction would be made. Boys clubs was another matter that was spoken of and the secretary was instructed to call the attention of the police to these resorts. In the outskirts of the town boys have broken into and taken possession of more or less dilapidated premises, split the fences up for fuel and at their meetings play cards, gamble and use obscene language. There are at least three such rendezvous in Galt."

The officers of the society are as follows :

*President* : James Wood.

*Vice-Presidents* : James R. Cavers, Mrs. W. Graham.

*Secretary* : James E. Kerr.

*Treasurer* : Mrs. R. Alexander.

*Hon. Solicitors* : Beaumont and Irvin.

*Executive* : Mrs. J. R. Scrimger, Mrs. Dr. King, Mrs. Carscadden, Miss Jaffray, Hon. James Young, J. T. Graham, A. H. Goodall, S. McGiverin, the Mayor and officers of society.

## BELLEVILLE.

The work in Belleville has not been as actively carried on during the past year as might have been desired. Most of the work was apparently left to two or three and these were greatly discouraged by the lack of general interest and the difficulty of securing an attendance at any of the meetings called. The society was also hampered by lack of funds, and if a case presented itself that involved any expenditure, even those most interested would hesitate before taking action. I have endeavored in every way possible to assist in developing a greater enthusiasm in the work, but I regret to say that a meeting which I attended for this

purpose proved a failure, only about ten persons being present. There is certainly a pressing need for work of this kind, not only in Belleville but in all parts of the County of Hastings, and if properly organized and carried on there is a good field for useful work, with Belleville as a central point. Quite a number of letters have been sent to me during the year from this county, describing cases of extreme neglect of children, but it was impossible for me to give all the assistance necessary. During my last visit the leading members promised to bring about some plan of re-organization whereby the work would be established upon a better basis.

---

#### GODERICH.

The members of the Children's Aid Society in the County of Huron, have, I fear, been rather discouraged in the work owing to the publicity and misrepresentation given to one of the cases dealt with by them. A mother who wished to have her children given better opportunities than she could provide for them, voluntarily transferred three children to the guardianship of the society. The officers state that the legal conditions essential were complied with, the papers were further witnessed by the Police Magistrate, and that the mother clearly understood that the children would be sent to foster-homes. Some months after the children had been provided for in this way, the mother repented having given them up and in order to further her application to get them back, claimed to have been ignorant of the full effect of the agreement. A number of persons to whom she went advocated her cause very strongly, with the result that a good deal of unpleasantness was occasioned. The matter has now, to a large extent, been adjusted, and it is hoped that the society will not feel that there should be any cessation of their work, but rather that this case should serve as an illustration of the necessity for careful consideration before children are accepted or removed from their responsible guardians.

Mr. Ernest Heaton is president of the society and Mr. William Lane is secretary.

---

#### BERLIN.

The annual meeting of the Children's Aid Society of Berlin was held on November 14th, 1898, with Mr. J. Fennell presiding. Reports were submitted showing that the Society had not been inactive during the year, but had materially assisted in improving the condition of a large number of children. A discussion took place regarding the wrong method that had been adopted in dealing with a girl of fourteen. She had been very badly treated at home, and the redress provided was a committal of the girl to the jail for six months. Such procedure was considered to be diametrically opposed to the principles of

rescue work, and it is likely that in any similar case in the future the Society will secure a better decision.

The following officers were elected :—

*President* : Rev. R. Atkinson.

*Vice-President* (Berlin) : Mr. L. J. Breithaupt.

*Vice-President* : (Waterloo) Mr. Buckberrough.

*Treasurer* : Mrs. (Dr.) H. G. Lackner.

*Secretary* : Mr. F. Colquhoun.

*Agent* : Mr. George Martin.

*Committee* : Mrs. H. L. Janzen, Mrs. J. Kaufman, Mrs. C. Breithaupt, Mrs. J. B. Snyder (Waterloo), Rev. R. von Pirsch, C. Eitzer, J. C. Breithaupt, Mrs. J. Motz, Mrs. D. Chisholm, Rev. Dr. Henderson, Mrs. G. Rumpel, Rev. C. S. Smith, J. Fennell, Mrs. (Dr.) Geikie, and A. H. Erb of Elmira.

---

### BARRIE.

The Children's Aid Society of Barrie has been progressing during the past year, and at the meeting of the officers, which is held on the second Tuesday of every second month, the work is carefully considered in all its aspects. Several children neglected and deserted by their parents were placed under the guardianship of the Society, and provided with good homes. In addition to this a good many cases were dealt with in which the condition of the children was materially improved without the necessity of applying for guardianship. Several cases are at present engaging the attention of the Society, and it is likely that they will be called upon to assume the care of two or three children for whom it seems impossible to secure proper treatment in their own homes. A young girl who was committed to the charge of the Society was found to be suffering from eye trouble, and the Society provided suitable medical treatment. During the year an illustrated lecture on child-saving was given under the Society's auspices.

The officers of the Society are as follow :—

*President* : H. H. Strathy.

*Secretary-Treasurer* : Rev. W. R. McIntosh.

*Visitor* : Mrs. S. G. McKee.

*Agent* : Chief-Constable King.

---

### NAPANEE.

A society organized quite recently is that of the Children's Aid Society of Napanee. The origin of the movement there is quite interesting. For some time a Municipal Relief Committee had been in existence, but they found they were only providing for women and children in order that drunken and indifferent

adults might be maintained in idleness. Several families that had been helped constantly for over a year were no better off in the end, and the children were simply growing up to continue the same evil and improvident life. After a full discussion of the whole subject, it was decided to organize a Children's Aid Society, and either insist on the parents properly providing for their children themselves or giving up their control altogether. In response to a request for assistance and advice, I visited Napanee and gave an address on the evening of December 2nd last, and a society was duly organized.

The officers are as follows:

*President*: Stephen Gibson.

*1st Vice-President*: Mrs. Thos. Symington.

*2nd Vice-President*: M. S. Madole.

*Secretary*: F. L. Hooper.

*Treasurer*: Uriah Wilson, M.P.

*Hon. Council*: W. H. Perry.

*Council*: Dr. Symington, William Templeton, A. Alexander, Mrs. F. Lane, Mrs. W. T. Gibbard, A. E. Paul, Elisha Scott, Mrs. A. W. Grange, Dr. G. H. Cowan, Mrs. S. Warner, Thos. Jamieson, John McKenty, D. J. Hogan, Mrs. E. McGurn, Mrs. A. McNeil.

#### OTHER SOCIETIES.

A Children's Aid Society was formed in Trenton nearly two years ago, but after the first few months very little was attempted. The work in Brighton may also be said to have passed out of existence, as the Society's field was very limited, and the removal of Rev. C. W. Watch to Belleville took away the Society's strongest advocate. A Children's Aid Society organized in Gananoque some four years ago has ceased to exceed, owing partly to the removal from the town of one of the prime movers in the work and to the limited field of operations. Several homeless children were sent to Kingston to be provided for. Societies have been formed in St. Thomas and Woodstock.

BOYS AT PLAY VICTORIA INDUSTRIAL SCHOOL.

# INDUSTRIAL SCHOOLS.

TORONTO, January 25, 1899. ✓

TO THE HONORABLE E. J. DAVIS,  
Secretary of Ontario.

SIR,—The Industrial Schools Act of Ontario, sections 35 and 36, provides as follows :

35. The Superintendent of Neglected Children shall, by virtue of his office, have the right to inspect every institution receiving aid under this Act.

36. The said Superintendent shall, from time to time, visit and inspect every Industrial School and make all proper inquiries as to the maintenance, management, and affairs thereof ; and by examination of the registers and such other means as he may deem necessary, particularly satisfy himself as to the correctness of any returns made under this Act, or under any Order in Council in that behalf, as aforesaid ; upon all which matters he shall make report to the Lieutenant-Governor in Council.

Under the terms of this Act I have the honor to report as follows :

✓

**T**HE three Industrial Schools for the training and care of wayward or incorrigible children have been doing good work during the past year, and are filling a very necessary and important place in the general work of child-saving. There will always be children who have been neglected too long and for whom a course of training is necessary before they can be placed in family homes. There are, too, children who are guilty of repeated offences and as a punishment their temporary commitment is decided upon. Everything of a prison character or tendency is carefully avoided in these Schools, and the children have been aided and encouraged in every possible way in the development of self respect and sterling character. The total population of the three Schools is less than two hundred, and for a Province of nearly one and a half million of people this is a remarkably good showing. In the United States there is hardly an Industrial School having less than two hundred inmates, while in many of the States there are from three hundred to five hundred in each institution. While it may be possible that there are boys and girls in Ontario who ought to be in the Industrial Schools, there has certainly been a great deal of effort expended during the past five years to improve the home life of children so as to avoid the necessity of their commitment to public institutions, and homes have also been found for children who would, under former conditions, have gone to an Industrial School as the only home available for them.

## VICTORIAL INDUSTRIAL SCHOOL.

Good progress has been made in this institution during the past year, and the work is now in a very satisfactory state, with probably the exception that the income is not quite sufficient to provide the school with all the necessary appliances. There are 115 boys on the roll. During my visits I have noticed an increasing appearance of contentment and happiness, and at the Christmas cantata, the entertainment provided for a large audience of visitors was of a high character. The boys took their various parts with ease and skill, showing to advantage the excellent training they are receiving. Some complaints have been made during the past year that boys were retained in the institution too long, but there has been great improvement in this direction, and the superintendent has made a reasonable effort to comply with public sentiment in this particular.

At the annual meeting held in October last the report of the year's work contained the following information:—There have been committed to the School since its opening 586 boys. Of these 477 have been sent out to homes and situations. On Sept. 30th, 1898, there were 110 boys in attendance. So that in point of numbers the school is in about the same condition as it was a year ago. There have been 49 boys committed, and four returned during the year. Fifty have been sent out, and four have been transferred to St. John's School, Blantyre. From this it will be seen that the number received has corresponded very nearly with the number that has gone out.

Of fifty-four boys who left the institution during the year twenty-three went to work on farms and seven returned to their homes either to attend school or to work in situations that had been secured for them. Of the forty-nine boys received for training during the year, Toronto sent twenty-one, Hamilton six, the County of York five, Grey County five, Guelph two, Oxford two, Norfolk two, and one each from a number of other municipalities. The reasons for commitment were chiefly incorrigibility, truancy, and larceny. Sixteen of the boys had no father, six had no mother, while four had neither father nor mother. The great majority of the lads were from 10 to 13 years of age when committed. Only a very small proportion could read or write when admitted to the school, thus showing that defective home-training was the cause primarily of their committal. In addition to the two dollars per week paid by the municipality, the Government grant on the basis of ten cents per day towards the maintenance of pupils, amounting to \$4,181.90.

## ST. JOHN'S INDUSTRIAL SCHOOL.

I have visited this School, situated in East Toronto, quite a number of times during the past year, and have pleasure in testifying to the good work that is being done under the management of Brother Orbanus. There has been a rather rapid growth in the number of boys sent during the year, the total number of the roll

at present being forty-two. The boys are governed in a kindly and friendly spirit and the fact that they are trusted and respected tends to develop in them a love for the School and a ready obedience to the rules set for their guidance. An excellent illustration of the manner in which they are being educated may be found in the fact that during the Christmas holidays twenty-one lads were allowed to go to their homes and all but one returned at the time appointed for them. In addition to the Municipal grant of two dollars per week for each pupil, the Government's grant on the basis of ten-cents per day amounts to \$1139.40.

#### ALEXANDRA INDUSTRIAL SCHOOL FOR GIRLS.

can also speak with confidence of the work done at the Alexandra Industrial School for Girls, East Toronto, under the superintendence of Miss Walker. There are at present in the School twenty-eight girls ranging in age from eight to sixteen years, and every effort is put forth to give them a suitable training for their future life. Quite a number of the girls who have graduated from this School are employed within a radius of five miles and they frequently come to the School to spend their holidays and to receive advice and guidance from the Superintendent. The fact that these girls look to the School as their home speaks well for the kindly interest that has been taken in them. The Government grant for the year amounted to \$888.70.

---

APPENDIX.

---

## IMMIGRATION OF BRITISH CHILDREN.

---

Parliament Buildings, Toronto, January 15, 1899.

TO THE HONORABLE E. J. DAVIS,  
Secretary of Ontario.

SIR,—I have the honor to submit herewith a report of the work carried on in Ontario during the year 1898 by philanthropic societies of Great Britain under the Act of the Ontario Legislature entitled “An Act to Regulate the Immigration into Ontario of Certain Classes of Children.”

Your obedient servant,

J. J. KELSO.

---

## JUVENILE IMMIGRATION.

**I**N my last annual report the history of the juvenile immigration movement was given so exhaustively that it will not be necessary to go into the subject this year with any degree of detail. Under the new legislation the number of children brought to Ontario has been greatly reduced and the regulations adopted have, it is believed, led to greater care and discrimination in the work carried on. Early in the year, Mr. P. Byrne, the Ontario agent at Liverpool, was appointed examiner under the Act, and it became his duty to personally inspect and guarantee the children as suitable settlers for Ontario. Formerly the children were merely inspected in bulk as they passed on ship-board at Liverpool, but under the new system those intended for Ontario have been carefully inspected by Mr Byrne, in the homes or institutions where they had been in training. The general report and monthly letters received from Mr. Byrne and printed herewith, will give some idea of the care that has been exercised in the selection of the children :

ONTARIO GOVERNMENT AGENCY,  
9 James Street,

Liverpool, December 1st, 1898.

J. J. KELSO, ESQ.,  
Superintendent, Neglected and Dependent Children.  
Ontario.

DEAR SIR,—I have the honor to report that in the exercise of my duties as examiner or inspector under the Act "To regulate the Immigration into Ontario of certain classes of Children," I have, during the past season, paid eighteen visits to twelve different orphan homes and their branches for the purpose of inspecting parties intended for emigration to our Province. The following is a list of the institutions referred to, namely :—

- Dr. Barnardo's Boys' Home, Stepney Causeway, London.
- Dr. Barnardo's Girls' Home, Barkingside, Essex.
- Southwark Catholic Emigration Society's Home, London.
- Southwark Catholic Emigration Society's Home, Orpington, Kent.
- Mr. Shaw's Children's Homes, Strangeways, Manchester.
- Mrs. Birt's Sheltering Homes, Liverpool.
- Dr. Stephenson's Children's Homes, Bonner Road, London.
- Dr. Stephenson's Children's Homes, Edgworth, Lancashire.
- Miss Macpherson's Homes, London.
- Mr. Fegan's Homes, Southwark, London.
- Mr. J. Galloway's Girls' Home, Ardrossan.
- "Waifs and Strays" Society, London.

The total number of children comprised in the several parties emigrated was 818, namely, 461 boys and 357 girls. Two or three small parties were inspected on their arrival at Liverpool, as I thought it was not worth while incurring the expense of a long journey to their homes for the purpose. [Some of these children passed on to the Northwest.]

I am happy to say that on all the occasions of my visits I was invariably received with the utmost courtesy by the Governor and other officials, who offered me every facility for the proper discharge of my duties.

The children were first inspected while drawn up in line as in a military parade and afterwards brought before me, one by one, for closer and more minute examination. After ascertaining, as far as possible, that they were physically and mentally sound and free from any serious bodily defects, I made careful enquiry into their character and antecedents. In these investigations I was assisted by the Governor or other official who, being especially acquainted with the facts and circumstances of each case, gave me all the information necessary to enable me to form a judgment upon it. Besides, the registers of the institution, which contain the written particulars of each child's history, were also generally available for my inspection, if required. But so carefully had the children belonging to the several parties been selected, that it was only in a few instances I found it necessary to reject a candidate for emigration honors. I may here remark that emigration is universally popular with the children, who have been led to look upon Canada as a land of promise and rejoice at the prospect of being sent out there.

In the course of my inquiries I found that the educational attainments of a considerable proportion of the children, especially those who have been several years under training, were very good, some of them having passed the highest board school standards. But the schooling of others had left much to be desired, their backwardness being doubtless due to the wretched and poverty stricken condition from which they had been rescued at a comparatively recent date. However, all I examined were certified as being able to read and write, except those of tender years whom it was intended to have educated in Canada.

During the examination to which they were subjected, I usually put to the children a variety of questions to test their mental alertness, their general intelligence, and their capacity and experience in doing different sorts of work. I thus learned from the children themselves, that all of them, boys as well as girls, except the very young, had been taught and were accustomed to do many kinds of domestic and other work; also trained to be "handy" and to make themselves generally useful. The boys who were trained in country homes had learned gardening and nearly every kind of farm labor including plowing, in some cases. Others had been taught various trades such as baking, carpentry, brush making, cobbling, &c., &c. In nearly all the Homes the bread for the establishment is baked by the boys themselves, under the supervision of a foreman, the bakeries being fitted up with all the latest improvements. The laundry work, in like manner, is done by the girls and young women, the appliances being of the best kind obtainable. Dairying is another skilled industry which is carried on by the girls in some country branches of the larger Homes, which have farms attached. And here again, the most improved apparatus and up-to-date methods are employed and the butter made is of the finest quality.

In short, these philanthropic institutions, at least the larger and more important of them, are hives of busy, well-equipped industry, where very many important kinds of labor are skillfully organized and successfully prosecuted, giving healthful occupation and valuable technical training to their youthful inmates, and thus qualifies them to earn their own living wherever their lot may be cast.

I found that in all the Homes due regard was paid to the health and comfort of the children. Their dormitories were pictures of cleanliness and order. Habits of personal tidiness and cleanliness are carefully encouraged and inculcated. Their food is plain, wholesome and abundant. Their time is duly apportioned to useful work, inside or outside, to schooling, recreation and rest. Opportunities are also afforded for indulging in games and pastimes, gymnastic exercise, swimming, etc. In addition to ordinary school lessons, religious and moral instruction is daily imparted. Add to all this that in the system of management adopted in the different Homes, the law of kindness is a dominant and all pervading factor, and no one will be surprised to learn that the children whom they shelter and nurture testify by their looks and demeanor that they are happy and contented.

I may further add that my appreciation of the service which these Orphan Homes render to humanity has been greatly increased and intensified by what I have seen and learned of their operations during my official visits. Indeed, it now seems clear to me that the rescuing of unfortunate children from want and misery, clothing, feeding and instructing them, and, to crown all, placing them in a new environment favourable to their development into reputable and self-dependent members of society, is the very acme of philanthropic effort—the most Christ-like work in the world.

I have the honor to be

Your obedient servant,

P. BYRNE,  
Agent for Ontario.

## LETTERS FROM ONTARIO AGENT.

I have also received the following monthly reports from Mr. Byrne, which will be found of interest :

ONTARIO GOVERNMENT AGENCY,  
7, James Street.

Liverpool, April 1st, 1898.

J. J. KELSO, Esq.,

Superintendent, Neglected and Dependent Children.

DEAR SIR,—I think it would be a good thing if you could arrange to come over here and see for yourself the actual working of the various Homes that send children to our Province. This would give you a more comprehensive grasp of the whole subject of child-emigration than it would be possible to obtain in any other way.

During the past month I examined parties of children as follows, namely :

Dr. Stephenson's Homes at Edgworth, Lands, and Bonner Road, London. Party sailed March 15th, by S.S. Scotsman.

Mrs. Birt's Home, Liverpool. Number of children, 45. Sailed March 26th, by S.S. Assyrian.

Mr. Shaw's Home, Strangeways, Manchester. Number of children, 22. Sailed March 31st, by S.S. Labrador.

Dr. Barnardo's Home, Stepney Causeway, London, Number of children, 100. Sailed March 31st, by S.S. Labrador.

Each party consisted of boys excepting Mr. Shaw's, which included a number of girls. Mrs. Birt's children were, in the first instance, to be taken to the Knowlton Home, Quebec ; but as she was desirous of being free to send a portion of them to Ontario if expedient, she wished me to examine them.

All the children presented for inspection at the different Homes, I found eligible. In fact, I was much pleased with their condition and appearance generally, and with the many evidences they afforded of the careful, physical, moral and mental training they had undergone. Besides closely examining them individually and testing their mental alertness by a variety of questions, I inquired into their conduct and character and found them satisfactory.

I remain

Yours faithfully,

P. BYRNE,  
Agent for Ontario.

LIVERPOOL, JUNE 6th, 1898.

DEAR SIR.—“In the course of the month (April) I inspected four parties of children selected for emigration to Ontario from “Homes” for destitute children situated in London and at Ardrosson and Manchester. A careful examination showed that the children were quite healthy and had received for the most part a fair education and most excellent moral, religious and industrial training. Great care had also evidently been taken to teach them habits of obedience, order, neatness and cleanliness as well as kindness of demeanour one towards another. I also carefully inspected the Homes themselves and found them in every way well adapted to insure the health, comfort and happiness of the children. On leaving the Homes for Canada each child is supplied with a neat box containing an excellent outfit of upper and under clothing suitable for both summer and winter wear ; also two pairs of boots and other necessaries. The children consisted of sixty-eight girls and fifteen boys and I have no doubt that they will prove a welcome and useful addition to the families destined to receive them.

“In the course of the month (May) I visited two Homes for the purpose of inspecting parties of children to be emigrated from them to Ontario ; namely, Mr. Fegan's Home for destitute children, Southwark, London, and Mrs. Birt's “Sheltering Homes”, Liverpool. In the first named forty-eight boys were presented for examination and all were found eligible except two whom I felt it my duty to decline to pass on the ground of weak intellect. They were both highly recommended as of good character but I found them decidedly lacking in mental capacity which would probably become more pronounced as they grew older and so prevent them from making their way in a satisfactory manner as useful and responsible citizens.

I found in this as in the other Boys' Homes I have so far visited that the industrial organization of the institution was very thorough and the discipline strict without being harsh or severe. Consequently the children seemed well-mannered, bright and happy. Several skilled trades are carried on by the boys and all are trained in self-help and taught to make beds, scrub floors, lay tables, light fires and to perform many other useful household duties.

At Mrs. Birt's Sheltering Homes, Liverpool, I examined twelve boys and sixteen girls, all of whom were passed, being found apparently physically and mentally sound and otherwise free from objection.

The operation of the Ontario Act is having the effect of ensuring great care on the part of the managers of Homes in the selection of children for emigration to the Province. Hence, it is very seldom that I have to object to any child brought before me for examination."

Yours Faithfully,

P. BYRNE.

LIVERPOOL, JULY 4th, 1898.

DEAR SIR.—On the 7th June I visited Orpington (Kent) for the purpose of examining a number of children about being sent to Ontario from the St. Joseph's Catholic Orphanage of that place. The Home is beautifully situated amid healthy surroundings and is thoroughly well equipped for the training and education of the children. The party selected for emigration consisted of thirty-nine boys, all of which I found to be healthy and strong and of good character. Most of them had been trained in farm work or had been taught some trade. They had also been accustomed to perform a variety of household duties and to make themselves generally useful. All had received more or less school instruction and were generally bright and intelligent.

On the 16th June I examined a party of eight little girls from the Home of the Waifs and Strays Society. The number being small I deemed it unnecessary to incur the expense of a special visit to London for the purpose, so examined them on board the steamer and found them in every respect quite eligible.

Yours sincerely,

P. BYRNE.

Agent for Ontario.

LIVERPOOL, AUGUST 5th, 1898.

DEAR SIR.—In the course of the past month I visited Dr. Barnardo's Boys' Homes at Stepney Causeway, London, and the Girls' Homes, near Hford, Essex, for the purpose of inspecting parties of children about to be sent to Ontario. I examined ninety-two boys and 120 girls, all of whom I was enabled to pass as quite eligible for emigration to the Province. The parties sailed by the Dominion steamer "Labrador" on the 14th of the month.

They appeared to have been well trained, well educated and were strong and healthy and as far as I could judge and learn, were quite eligible for emigration.

I remain, yours sincerely,

P. BYRNE,

Agent for Ontario.

LIVERPOOL, SEPTEMBER 16th, 1898.

DEAR SIR.—I send you herewith enclosed lists of children from Dr. Barnardo's Homes in London and at Barking-side (Essex) who were inspected by me on the 13th inst. and sailed by the steamship "Dominion" from this port yesterday. The party consisted of seventy-seven boys and 120 girls who were found to be physically and mentally sound. From inquiries made and information laid before me I satisfied myself that the children were likewise free from objection both with regard to character and previous history.

Yours faithfully,

P. BYRNE,

Agent for Ontario.

LIVERPOOL, OCTOBER 21st, 1898.

DEAR SIR.—I send you herewith enclosed a list of twelve boys fr. m St. Vincent's School, Dartford, Kent, one of the branch Homes of the Southwark Catholic Emigration Society, London. The number being small I did not think it worth while incurring the expense of a visit to the Homes but examined the children on board the steamer. I found them a fine, healthy lot of boys and received from Mr. Parker, the gentlemen in charge of them, an assurance that they were all of good character.

I remain, yours faithfully,

P. BYRNE,  
Agent for Ontario.

*Type of lawdies  
ideal revealed?*

CERTIFICATES ACCOMPANYING EACH PARTY. ✓

The following is the certificate signed by the agent of the society sending the children :

I,.....do solemnly declare that I am responsible for the party of children named herein, now leaving Great Britain for settlement in Ontario, that I have made or caused to be made careful inquiry into the past history and state of health of each child; that I believe them to be honest and well-inclined, sound in mind and body, and free from any defect or impurity of blood that would render them undesirable settlers to the people of Canada; that to the best of my knowledge and belief they comply with the requirements of the laws of Canada or any province thereof.

Date.....

The Ontario agent signs the following declaration :

I,.....do solemnly declare that I am a duly appointed agent of the Ontario Government and in such capacity visited the Home located at.....for the purpose of inspecting the children named herein : that each child was brought before me separately, and the history and particulars laid before me; that as far as I could judge, the children are in sound mental and physical health, are free from any evident criminal tendencies, and are in my opinion selected in compliance with the provisions of the laws of the Dominion and the provinces thereof.

Date.....

PARTIES ARRIVING IN ONTARIO.

The following is the number of children who came to Ontario during the year under the auspices of the various philanthropic societies :

	Girls.	Boys.
Dr. Barnardo's Receiving Home, Toronto .....	....	181
“ “ “ Peterborough .....	242	....
Miss Macpherson Home, Stratford.....	11	27
Dr. Stephenson's Home, Hamilton.....	....	66
Mr. J. W. C. Fegan's Home, Toronto.....	....	42

	Girls.	Boys.
Marchmont Home, Belleville.....	23	25
Southwark Catholic Emigration Society, Ottawa....		90
Church of England Waifs and Strays Society, Niagara-on-Lake.....	22	
	298	431
A total of 729 children.		

There is a very marked reduction in the number brought out during 1898 as compared with 1897. During the latter year there were 1212 boys and 455 girls placed in Ontario from Great Britain—a total of 1667. The large reduction is accounted for by the withdrawal of Mr. Quarrier's work, and the fact that the Marchmont Home at Belleville received about 250 children less than former years, while all the agencies have greatly reduced their numbers.

## WORK OF THE RECEIVING HOMES.

**T**HERE are eight receiving homes in Ontario recognized under the Act and my visits to these institutions have at all times been courteously received. Such general information has been placed at my disposal as would enable me to certify to the general character of the work. I have found in my intercourse with them, and from my acquaintance with their work, that the managers of the various receiving homes are not only willing but anxious to comply with the spirit as well as the letter of the law, and to conduct such a work as will be fully acceptable to the people of Ontario.

### DR. BARNARDO'S HOMES.

During the year 375 boys were received at Dr. Barnardo's Home, Toronto, while 194 other lads were passed on to Manitoba. Sixty-eight of the smaller boys were sent to boarding places in the northern part of the Province, while the remaining 114 were placed in situations immediately after arrival. The applications for the services of these boys continue to be very numerous, the agent informing me that for each boy about six requests are received. I was further informed that although nearly nine thousand children have been brought to Canada under Dr. Barnardo's auspices the local agents were not aware, at the time of my visit, of more than four boys in prison and two in hospitals. During

the year thirty-one children were returned to England as not likely to do well in Canada. Two agents travel the year round visiting the boys while two others have charge of districts over which they exercise supervision. A large staff is employed and the books are systematically kept.

---

At the Peterboro Home for girls two parties arrived during the season—one of 120 and the other of 122 girls. When the first party arrived on July 24 I visited the Home and spent the day studying the various groups of children as they eagerly discussed their new surroundings. With very few exceptions they were a fine lot of children, and under proper auspices I could see no reason why they should not do well in this Province. No difficulty was experienced in providing them speedily with situations, the majority going out to assist in minding a baby. Four ladies of education and refinement are constantly employed in supervising the girls, and regular visits are paid to them in all parts of the Province. Complete records are kept of each child and reports are sent to England describing the progress made.

---

#### MISS MACPHERSON'S HOME, STRATFORD.

About forty-seven children arrived at the Macpherson Home, Stratford, early in the summer, which was less than half the number received in former years. During one of my visits there were ten small boys awaiting homes, but on a subsequent visit this number was reduced to two. Many applications were received for children which it was impossible to fill. Three children brought out in former years were returned to England as not likely to do well. A notable feature in connection with this Home is that the family ties are preserved as far as can be done. Children brought out to this country are encouraged to communicate with their parents, and foster-parents and employers are requested to write for the children. This chain of correspondence has led in the past to many happy results. I have been shown an actual instance on the books where one boy coming to this country had been the means of bringing his brothers, sisters and mother, while other relatives have indirectly been led to emigrate through hearing of the prosperity enjoyed by the young people. The fact that the child is able to look forward to a re-union on this side of the Atlantic with loved ones is often the means of encouraging them in industrious and thrifty habits. As an evidence of this it might be mentioned that a short time ago a lad forwarded all his wages to the Home and asked that a ticket might be purchased for his mother so that she could come to this country. I believe from my intercourse with Mr. Merry

---

and my observation of the work of the Home, that he is thoroughly interested in the welfare of his young charges and anxious to protect and help them to the full extent of his ability.

---

MR. FEGAN'S HOME, TORONTO.

A party of boys, numbering forty-two, was received at this institution, on George St., Toronto, in June. I called to see these lads immediately after their arrival and found them a fine, sturdy lot of young fellows. Their average age was fifteen, and all were able to read and write. etc. The majority went to situations in Western Ontario and the Niagara district. In addition to the regular agent, Mr. George Greenway, a visitor is employed to make regular visits to the boys in their new homes. No lads were returned to the Old Country, but several went back of their own accord.

---

CHILDREN'S HOME, NIAGARA.

This institution at Niagara-on-the-Lake is now conducted under the auspices of the Church of England Incorporated Society for Providing Homes for Waifs and Strays. One of the conditions under which this Home was authorized to continue its work was that a regular visitor should be appointed to supervise the girls placed in situations. A capable lady visitor has now been added to the staff and during the year she has visited 225 of the girls in their homes, with many good results. This Home only deals with girls, and the party this year numbering twenty-two, was much smaller than in any previous year. Four girls were sent back to England owing to defective health chiefly. The Home is under the direction of a Canadian Committee, consisting of Messrs. Henry Pafford, Charles A. F. Ball, Alfred Ball, and J. de W. Randall, and they have, at all times, shown a disposition to adopt any suggestions looking to the improvement of the work.

---

DR. STEPHENSON'S HOME, HAMILTON.

Twenty-five boys were received at Dr. Stephenson's Home, Hamilton, in the spring, a much smaller party than usual, as the management had decided to slacken the work until the Act was more fully understood. The average age of the boys was fourteen, and they were easily provided with situations in the central counties. This work is well-managed, and the interests of the children carefully looked after during their minority. Any child not likely to turn out well after reasonable trial, is returned to one of the English institutions.

GROUP OF DR. BARNARDO'S WARDS.

ENGLISH BOYS PLACED IN ONTARIO FROM MISS MACPHERSON'S  
HOME, STRATFORD.

---

---

SOUTHWARK CATHOLIC EMIGRATION SOCIETY.

The Ontario Receiving Home for the boys brought out under the auspices of this Society is located at Hintonburgh, a suburb of Ottawa. The resident agent, Mr. George Croxford, returned to England recently, and the work of placing and looking after the boys is now under the direction of Miss Proctor and Miss Urquhart, who direct also the Society's immigration work for girls, at Montreal. Ninety lads have been brought out this year and have been provided with situations on farms in Eastern Ontario. The chief difficulty experienced is in getting the older lads to settle down contentedly, as some of them find farm life too monotonous. Two boys were returned to England, and one lad, after being three years in the country, developed insanity, and is now in the asylum.

---

MARCHMONT HOME, BELLEVILLE.

The average number of children formerly received at the Marchmont Home each year was 250, while in 1898 only 48 were brought out, 25 boys and 23 girls. The boys were personally selected by Rev. Robt. Wallace, Superintendent of the Receiving Home, who goes to the Old Country each spring to arrange the party. The girls came under charge of Miss Smethurst, a well-known worker in connection with the Manchester Refuges. The children were placed almost immediately on arrival, and Mr. Wallace stated, during my visit, that many farmers who called at the Home, expecting to obtain a lad, were sent away greatly disappointed. An average of four or five applications per day had been received, which they were unable to fill. On one of my visits there were four children in the Home but they were there for training in the capacity of household help, and homes were not being sought for them. Both Mr. and Mrs. Wallace devote all their time and thought to the interests of these children, and seek in every way possible to promote their welfare, an extensive correspondence being carried on in addition to the visits of Mr. Checkley, who is constantly on the road, investigating and reporting on the treatment of the children.

# NOTES ON CHILD-SAVING.

GATHERED FROM MANY SOURCES.

---

“THIS multiplication of children in an environment of vice and misery is one of the most terrible problems of our times.”

---

“While there is a neglected, untrained, badly born or badly bred child among us, there will be social demoralization of all sorts springing from that one perverted or undeveloped life.”

---

Think of the infinite possibilities in the mind of a little child!—Capable in the one direction of the vilest wickedness, and in the other of the loftiest intellectual and moral aims.

---

The neglected hovel in the valley may bring disease and death to the palace on the hill.

---

No one can tell when a child's education commences, for from the moment of its birth it is observing and absorbing, and its character is being formed for later life.

---

The first endeavor of those who have a part in child-saving should be to counteract vicious tendencies, and obliterate as far as possible all traces of evil impressions.

---

“To look helplessly on while children are being trained up by hundreds to become vicious and criminal men and women, reserving all our money and energy for their apprehension and punishment when they shall have become full-fledged, is too shortsighted and ruinous a policy to be perpetuated by an intelligent community.”

---

“After all, the law of environment is of greater practical importance to us than the law of heredity, because the former is more or less under our control. The more we study and value all the results that follow from environment, the more we shall endeavor to improve those qualities which we transmit to our offspring.”

---

Harsh treatment and continued fault-finding has caused many timid children to grow up defective, who, under proper management, could have developed into bright, intelligent men and women.

---

The most precious of what we have to give is that which comes out of our hearts. The rich child, in giving to the poor one, not material things only, but a portion of her own or his own life and soul, is helping herself no less than the poor brother or sister in whose heart she sows the seeds of things that are true and tender and lovely, and of good report.

“There is no religion without love, and people may talk as much as they like about their religion, but if it does not teach them to be good and kind to man and beast, it is all a sham James, all a sham, and it will not stand when things come to be turned inside out and put down for what they really are.”—*Black Beauty*.

There is something very touching in sickness and suffering. How sad to witness a little gleeful life sinking down in the sharp grasp of Suffering! But how specially sad, when instead of beholding suffering childhood, as we generally see it, tenderly nursed, and all its trials smoothed down by gentle care, skill and sympathy, we find it in a state of neglect and want, surrounded by dirt; breathing foul air; pining in stifling, sickening heat; aye and absolutely dying, for want of cleanliness, fresh air, proper food, and medical skill.

“Children early catch the tone of their surroundings, and become harsh or tender, indifferent or solicitous, sympathetic or selfish, courteous or rude, as those around them. By loving example and persuasive influence they can be accustomed from the first to take pleasure in each other’s joy, and to be sorry for each other’s pain, to try to promote the one and assuage the other, to be kind and courteous, generous and self-sacrificing until such feelings and conduct grow to be the habit of their lives.”

“As long as children are raised in misery, vice and degradation, the prisons will be full. The gulf between rich and poor will grow wider. One will depend on cunning the other on force. It is a great question whether those who live in luxury can afford to allow others to exist in want. The poverty of the many is a perpetual menace. If we expect a prosperous and peaceful country, the citizens must have homes. The more true homes the more patriots, the more virtue, the more security for all that gives worth to life. The more real education, the less crime, and the more true homes the fewer the prisons.”

Lewis Carroll, or to use his right name, the Rev. C. L. Dodgson, whose “Alice in Wonderland” has been the delight of childhood for so many years, died on January 14, 1898. In the preface of one of his works he wrote: “No praise has given me one-hundredth part of the pleasure it has been to think of the sick children in the hospitals (where it has been a delight to me to send copies) forgetting, for a few bright hours, their pain and weariness—perhaps thinking lovingly of the unknown writer of the tale—perhaps even putting up a childish prayer for one who can but dimly hope to stand, some day, not quite out of sight of those pure young faces, before the great white throne.”

His letter “Easter greeting to every child who loves Alice,” displays a charming sympathy with child-life, and is well worthy of reproduction:

Dear Child,—I do not believe God means us to divide life into two halves—to wear a grave face on Sunday, and to think it out-of-place to even so much as mention Him on a week-day. Do you think He cares to see only kneeling figures, and to hear only tones of prayer—and that He does not also love to see the lambs leaping in the sunlight, and to hear the merry voices of the children, as they roll among the hay? Surely their innocent laughter is as sweet in his ears as the grandest anthem that ever rolled up from the “dim religious light” of some solemn cathedral? And His Easter sun will rise on you, dear child, feeling your “life in every limb,” and eager to rush out into the fresh morning air—and many an Easter-day will come and go before it finds you feeble and grey-headed, creeping wearily out to bask in the sunlight, but it is good, even now, to think sometimes of that great morning, when the “Sun of Righteousness shall arise with healing in his wings.”

## THE TRUE SPIRIT OF SERVICE.

IN reading over the reports of public institutions, many of them so cold and formal in tone, one does not often come across a truer conception of a superintendent's responsibility than the following, taken from an Ohio County Children's Home report :

"Our children have been well clothed and well fed, but does responsibility end in this alone? No, emphatically no! The greatest responsibility, or at least that which tries the heart, is when you and the child and God are the only ones who take part in the exercises. It is, perhaps, the first real lesson the child ever had in Divine thoughts. You, at least, may be so impressed. You will not feel at a loss for words; there is plenty to say. But the question which confronts you is, "What ought I not to say and how shall I say what I do say?" What you may say is not alone for the present occasion, nor for time, but for Eternity. Not to make the child obedient only, but while it is in this Home we endeavor to so mould its character that it may become an honest, upright and respectable citizen. We are not only to repeat some words of scripture, and tell of God and His commandments, but we must make our heart like a child's, reflect that a child has desires, aspirations, passions and temper. Therefore we must for the time become children, and be able to govern ourselves for the sake of the child, because of our age and experience."

## MOTHERHOOD.

Great deeds are trumpeted; loud bells are rung,  
And men turn round to hear:  
The high peaks echo to the peans sung,  
And some great victor cheer. And yet great deeds are few.  
The mightiest men find opportunities but now and then.

The sweetest lives are those to duty wed, . . .  
The world may sound no trumpets, ring no bells;  
The Book of Life the shining record tells.

God help all mothers so to live aright,  
And in their homes all truth and love unfold,  
Since life for them no loftier aims can hold  
Than leading little children in the light.

## A DANGEROUS PASTIME.

An editorial note clipped from one of our newspapers, not long ago, is worth reproducing here for the benefit of parents :

"Well dressed girls of from twelve to fourteen years of age, who look as if they belonged to respectable families, may often be seen on the streets as late as ten o'clock at night, exhibiting the swaggering and hilarious manners of street-walkers. They attract the attention of fast young men by the boldness of their behavior. Indeed this is evidently what they plan to do. It is not difficult to guess what the girls will become. How parents can allow their young

daughters to walk the streets at night is a mystery. Do they forget that girls of the age named sometimes very easily fall a prey to the wiles of the fast young men? We advise our readers, who have daughters that go out nights, to quietly investigate that they may learn in what company they are and how they behave.

In a well-known ballad called "Little Breeches," Col. John Hay tells in the vernacular the story of a little fellow whirled away from the top of a wagon by a blizzard, and found at last huddled safely and warmly with the lambs in an open shed. The poet's moral is one that aptly applies to Children's Aid work :

"How did he git thar? Angels.  
He could never have walked in that storm.  
They just stooped down and toted him  
To whar it was safe and warm.  
And I think that saving a little child,  
And bringing him to his own,  
Is a heap sight better business  
Than loafing around the throne."

#### IGNORANCE AND WRONG-DOING.

The evils to be attacked with the most vigor and persistence are ignorance and wrong-doing. They underlie all the many sorrows and tragedies which afflict mankind. They are the roots from which every variety of calamity springs. The truest philanthropist and the most effective reformer is he who appreciates this, and makes it the basis of his efforts; and the happiest man or woman is the one who, in a wise self-culture and a broad sympathy with others, holds fast to the conviction that character is the essence of destiny.

"Institutions for destitute children have one splendid advantage over our Society in their power to demonstrate to the sight of the public the nature of their work. Children in pretty dresses, dainty caps and frocks and sailor suits, are exhibited at their annual festivals, with spirited juvenile bands of music, who look as happy and healthy as they are pretty. The public sees what these do, and feels what it sees. Our own work, however, is to leave children in their own homes, to remove their destitution and misery by reforming their parents, and to make their own homes like the ordinary homes of natural and humane British parents."—Rev. Benjamin Waugh.

Mr. Pascoe, editor of *London of To-day*, said lately: "We hold that no higher form of Charity can be practiced than that which takes thought for children. They are as yet but on the very threshold of life. We who have reached its middle stages, and know what life, even at its best, means, and who, looking backward upon our own experiences, also know that for most of us its happiest period has been our childhood, spent under the loving care of wise, good parents; we who recognize this, need no appeal either to our sympathy or our charity to alleviate the condition of child-life among the struggling, deserving poor; child-life all too frequently unhappy, because so often unassociated with that brightness and playsomeness in the home without which childhood is bereft of that happiness at the outset of life that would seem to belong to it of right, and which not even the most callous would willingly deprive it of."

The depopulation of the country districts is a subject that frequently engages the thoughtful consideration of public men. In a magazine article recently, a writer on this subject remarks: "Why is not the young villager satisfied to live the monotonous, uneventful life of his forefathers? For this sure reason, because his conditions have changed; education, cheap papers and books, train and telegraph have excited his imagination and told him of a more varied and exciting life than he has had any experience of, and he very naturally wishes to see something of it, and if a little of this varied life is not brought to him in the villages, he will seek it in the towns at any sacrifice to himself and others."

The conclusion arrived at is: "What the people require is not so much instruction or good advice, but amusement and change, and it is very largely for the want of this that the young people are rushing into the congested centres." An important patriotic work done by Children's Aid Societies is the placing of young children in these rural districts, thus conferring upon them a direct benefit, while at the same time relieving to some extent the congested civic charities.

"STRETCH IT A LITTLE."

Trudging along the slippery street,  
Two childish figures, with aching feet  
And hands benumbed by the biting cold,  
Were rudely jostled by young and old,  
Hurrying homeward at close of day,  
Over the city's broad highway.

"Come under my coat," said little Nell,  
As tears ran down Joe's cheeks, and fell  
On her own thin fingers, stiff and cold.  
"Tain't very big, but I think 'twill hold  
Both you and me, if I only try  
To stretch it a little. So now don't cry!"

The garment was small, and tattered and thin,  
But Joe was lovingly folded in,  
Close to the heart of Nell, who knew  
That stretching the coat for the needs of two  
Would double the warmth, and halve the pain  
Of the cutting wind and the icy rain.

"Stretch it a little!" O girls and boys!  
In homes overflowing with comforts and joys,  
See how far you can make them reach,  
Your helpful deeds and your loving speech,  
Your gifts of service and gifts of gold;  
Let them stretch to households manifold.

---

INDUSTRIAL SCHOOL WORK IN MASSACHUSETTS.

The fourth annual report of the trustees of the Lyman and Industrial Schools of Massachusetts is thus favorably referred to in the Charities Review: "The opening paragraphs of the report of the Lyman school for boys (a state reformatory) indicate a spirit that is too rare among trustees and managers of children's institutions. 'The substantial buildings scattered over the hillside at Westborough are the most obvious, but by no means the most important feature of the Lyman school; for out of over 800 boys whom the school is endeavoring to influence and guide into good citizenship, little more than one-third will be found upon the insti-

tution grounds; the rest are living apparently much as other boys live in the world, yet subject to such control as is calculated to prevent the relapse which too often follows a period of restraint, and to supplement the lack of home conditions.'

"This sense of responsibility for the children who have left the school, but have not yet attained their majority, leads to a very conscientious and painstaking effort to give an accounting to the public of the boys who have been intrusted to the care of the trustees of the school. All through the report one hears much of the boys, of how long they stay at the school, what they do in it, how they are classified, where they go when they leave the school, what occupations they follow, why some boys again fall into evil ways, and what the school does with such cases. We are given the facts concerning the admission, school life, discharge, and subsequent career of Joe, John, Michael, Jimmy, and are spared any long account of the new laundry, the brick dormitory, and the barn. Of the boys released during the year eighty-eight were returned to their parents on probation, eighty-six were placed out, and thirty-seven were boarded out. The proportion returned to parents is much lower than from most reformatories, while the boarding-out feature, in connection with a reformatory, is a most welcome proof that placing-out and institutional methods are not mutually exclusive, but that each has its place in a well organized effort to rescue children from the effects of a bad heredity and a worse environment.

"Particularly interesting is the report of the superintendent of visitation, who had under his supervision during the year 753 boys who had been discharged from the school. Of these eighty-six reached the age of twenty-one years during the past year, of whom 60.4 per cent are doing well beyond question; 19.8 per cent are doing fairly well; *i. e.*, are honestly self-supporting; 11.6 are known to be doing badly; 5.2 per cent are unknown, and three per cent are in the army. This, it should be remembered, is an account of the boy's conduct in most cases five years or more after his discharge from the school. If every reformatory (and we may add every orphan asylum and every placing-out agency) will hold itself to as rigid an accountability as this we shall make more progress in the next decade than we have made in the past half-century."

#### AN OPPORTUNITY FOR USEFULNESS.

There is many a Christian heart longing to do something for the Master but no work seems to present itself. Had the love of Christ burned as brightly in their hearts before they were married as it does now they would have given themselves to foreign missions or engaged in hospital or charity work. But now they are debarred from anything of this kind and there seems to be nothing they can do except to be faithful to the appointments of the church and sing "Oh to be nothing." If any of our readers are in this condition we want to tell them where they can do work that has possibilities of larger fruitage than anything we know of—namely, to take a homeless child and train it. We do not mean by this that you take a blue eyed, flaxen haired little girl, two or three years old whom everyone will envy you the possession of, but an unattractive, rude, rough boy, a child whom nobody wants, one to whom society is barely willing to give standing room. These are the children whom the Lord is especially interested in.—*Children's Friend.*

#### PENNSYLVANIA.

One of the most influential societies for the care of children is the Children's Aid Society of Pennsylvania. A recent periodical speaks of its aim and purpose as follows:

"The establishment of the Children's Aid Society of Pennsylvania marked a new era in the history of child-care in this State. This Society commanded at once the attention of the

thoughtful public by the directness of its purpose and the simplicity of its plan. Under the conviction that charity is true charity only so far as it is curative, it saw in the congregate plan of caring for children of the pauper class in institutions and almshouses a succession of dependents demanding always more institutions and more almshouses. Believing that prompt measures should be taken to separate the children of neglect one from the other, to remove them from the association of the idle, and to give them an opportunity to begin, as soon as possible, a life under wholesome conditions: believing there were separate homes enough in the State for every homeless child, and at the same time being determined that no natural guardian should escape his responsibility in helping to provide that home, a work of investigation and cooperation was begun which has proved to be as wise as it is far-reaching. A society had come proposing not to build homes or asylums or orphanages, not to add long dining-rooms and big dormitories to the altogether too long list of such crowding places for children, not to collect into artificial communities children withdrawn from the public body, in which public body they must eventually take their place as citizens, but, to quote from an early record of the society, proposing "to distribute them, as fast as possible, into private homes, where, under natural and healthy conditions, they might speedily be absorbed into the life of the community; where they might lose their mark of pauperism and grow up to an honorable manhood and womanhood."

---

#### IMPROVEMENT OF HOME LIFE.

"It is our work to improve the condition of the poor, to improve their homes, not break up and destroy them. Our charity must seek the poor man by his own hearth, and encourage him there, not drive him to seek help in public asylums and almshouses, where self-respect is often destroyed and lost. There can be but little hope for the future unless we clearly understand that the home is the foundation of social organization. The home feeling and spirit should be encouraged, not alone upon the affections, but along the lines of social reform and moral improvement, and our efforts in this direction should be prudent, critical and courageous. It is in the solution of the child problem that the regeneration of society is to be effected and the greatest and best results of our labors are possible of attainment. If the children can be properly born, their bodies cared for and developed, their minds and senses soundly educated, they will grow up worthy citizens and be able to take care of themselves morally and religiously. If we wish to educate the children of the poor it would not be amiss to begin with the parents, improve their condition, improve their homes, for it is at home after all, that the child gets the education which governs his character, for good or ill."

---

#### MACHINE-MADE CHILDREN.

"In large establishments it is necessary that machinery should be used, and that there should be a multitude of appliances such as a girl will not find in the small houses where she graduates in service. Add to this the necessity of a system which with a large number of children become mechanical, and dwarfs individuality, and we see that whilst those who look only at the establishment, see in it a perfection of order, it may be destitute of that particular training which fits the girls for the line of life to which they are consigned when they leave it. The treatment of children in large masses is necessarily different to that of family life, and involves the absence of anyone to take the place of the mother, to call out the affections, to influence the character, and to develop the human side of the children."

“I luv’ em, and they know it,” said a bright, cheery little body at the Manchester Conference of Ragged School Teachers. “Whenever the little ones get a bit fidgety, I tell ’em about my young days when I was a miserable, neglected girl in a drunkard’s home. My only bit of sunshine was to get to the ragged school. I there found my Saviour because I saw Him in my ragged school teacher. Now I love to tell the old, old story, and to give them a taste of that love which I so longed for myself.” It was easy to see the earnest woman was on right lines. We win the children by love. At the close of the meeting the husband came up and said: “My wife didn’t tell you all the story. She found me a miserable drunken man some years ago. She led me to the Saviour, and further added to my joy by consenting to be my wife. I owe everything to her loving influence, both for this world and the next.”

### YOU WILL NEVER BE SORRY.

For living a holy life.  
 For doing your level best.  
 For your faith in humanity.  
 For being kind to the poor.  
 For looking before leaping.  
 For hearing before judging.  
 For being candid and frank.  
 For thinking before speaking.  
 For harbouring clean thoughts.  
 For discounting the tale bearer.  
 For being loyal to the preacher.  
 For standing by your principles.  
 For stopping your ears to gossip.  
 For asking pardon when in error.  
 For being as courteous as a duke.  
 For the influence of high motives.  
 For bridling a slanderous tongue.  
 For being generous with an enemy.  
 For what you have given to missions.  
 For sympathizing with the oppressed.  
 For giving an unfortunate fellow a lift.  
 For promptness in keeping your promises.  
 For having patience with cranky neighbours.  
 For putting the best possible construction upon  
 the doings of others.  
 For helping the CHILDREN’S AID SOCIETY.
